Bank drafts are of all colors, shapes and sizes, some being works of art, while others more nearly resemble the old-fashioned family portrait album, in which the pictures of "Little Dottie" or "Grandfather Jones" occupy a considerable portion of the space allotted to the draft. They vary in size from the vest pocket edition to those of wall-paper dimen-

sions, on which the bank is obliged to pay freight in transferring it to its final place of redemption.

It would seem advisable, in view of the variety of tastes and ideas regarding bank drafts, that the most artistic of our members come down a little from their high plane of living, and that the family portrait devotees omit emphasizing the facial peculiarities of their relatives on the drafts, and both classes arrive at some simple design which can be adopted by all the banks in the United States and which will be capable of becoming as well, if not better known than the post office and express money order of to-day.

The next important proposition is that the banks in the United States agree to a uniform rate at which they will sell money orders up to and including denominations of \$100. There is a uniform charge made throughout the United States for the post office and express money order. A man, whether he be in New York or Oklahoma, knows what he is going to pay when he goes to the post office or the express company and buys a money order. A schedule of exchange having been arrived at, it will be very easy to adopt a uniform requisition blank which can be furnished newspapers, mail-order houses, jobbing houses and department stores in every distributing city in the United States, who will be very glad to use them in place of those of the post office and express companies, from the fact that the banks can afford to sell these orders at a handsome profit, at a cost that will not exceed one-half of what is now asked by the express and post office departments.

It is most important that this matter of a uniform charge for a bank money order or draft be settled, as we find in Minnesota in sending out the requisition blanks that they are not confined to the State of Minnesota, but go to the States of Wisconsin, Iowa, North and South Dakota and Montana, and without unity of action, it would only lead to confusion, as it would be embarrassing to the success of this work should a man present a requisition blank emanating from Minnesota to a bank in Montana and be told that they could not sell him a draft for ten or fifteen cents, but would have to charge him twenty-five cents. This would confuse the purchaser, and the next time he would be very apt to go to the express company or post office, where he knew absolutely that he could buy the order at the price advertised.

The Minnesota association has furnished the shipping houses, mail-order houses and newspapers in the Twin Cities with 250,000 of these application blanks, which are now sent out in place of the post office and express company requisitions. It is no trouble at all to induce the jobbers and merchants to use them. The manager of one of the largest seed houses in the Northwest told me that if the sale of bank money orders became general throughout the country, his firm would want 150,000 bank money order requisition blanks a year to enclose in their seed catalogues. We have had a number of similar statements made to us in Minnesota, and you can see the possibilities of advertising derived by the banks when the times shall arrive that these little slips will be sent broadcast throughout the country and the bank reap the benefit of the advertising now received by the post office and express companies.

In addition to the requisition blanks furnished, each member of the Minnesota Bankers' Association receives a number of large placards, with the red shield design, advertising money orders and giving the comparison between the cost of bank money orders and the express and post office money orders. Five thousand of these cards are tacked up in grocery stores, drug stores and banks in every town and village in Minnesota. The city of Winona ordered a number of thousand of these placards to be made at their own expense, and have tacked them up on the fences on all roads leading to Winona and distributed them to the storekeepers in all the surrounding country.

Also we are beginning to use a large card advertising the bank money orders and containing a specimen of the order as sold by the banks. This will familiarize the people with the order and make them more liable to ask for it of their own free will.

The bankers in the smaller towns in Minnesota are most enthusiastic over the results obtained and are distributing, at their own expense, blotters and other matter bearing the red shield design, on which is also given the comparative prices of three different orders (bank, post office and express). The reason why our Minnesota bankers are enthusiastic is very plain to any one who gives it a thought. It is simply this, that the money order requisition blanks emanate from the cities, where there are jobbing and mail-order houses, and are forwarded to the country where the people live who buy the goods. Necessarily the goods must be paid for in the country where they are bought, and it is the country banker who sees the express company and post office walking off with business which should be taken care of by himself.

We have tried to go about this proposition in Minnesota in a common-sense and business-like way, and what has been accomplished by one State can be accomplished by others. That the bankers of the country are thinking seriously of this proposition is shown by the fact that the State of Texas has been agitating this subject for several years, and in the States of Texas, Minnesota, Missouri, North Dakota, Virginia, Tennessee, Iowa and Wisconsin committees have been appointed, with power to select a design for an order, and the feeling in all of these States is that uniformity in advertising matter, and if possible in design of the order itself, should be observed.

It is a hopeful sign that the New York association should devote time to the discussion of this question. The way to solve the problem properly would be for these various committees appointed by the different associations to meet in convention and adopt a uniform design, uniform rates of exchange and uniform advertising matter. This could be accomplished under the auspices of the American Bankers' Association, or if that should be deemed an impractical plan, a call could be issued for such a meeting, independent of that association. There is no question but that the proper organization to push this work and obtain the best results is the American Bankers' Association. They have the machinery and officers who are paid salaries to "promote the general welfare and usefulness of the banks and banking institutions and secure uniformity of action." It is a pertinent query why this association has not already taken up this subject and brought it to a successful and profitable conclusion long ere this. They have the money to pay for advertising matter and to follow the lead of the post offices and express companies in furnishing requests for bank drafts or bank money orders, and it should have been done long ago.

We believe in our State that the way to accomplish results is to go after what we want in a businesslike and methodical manner and not waste our time in useless harangues on unimportant details. Our programme in regard to bank money orders was so arranged at our last convention as to bring out the following remarks from a prominent Iowa banker who is greatly interested in the subject:

"The proceedings of the Minnesota Bank Money Order Association received and read with interest. From the convincing addresses made there, it looks as though you had arranged the programme with the idea of making converts of even the most skeptical on the subject of bank money orders. If you had given your ministers a tip so that they would have mentioned the subject in their prayers, I think arrangements could have been made to have had these orders honored at the courts of St. Peter for passage tickets to the happy hunting grounds."

I replied to this in part by stating that this idea had not occurred to us, but if the different associations in the country took the work up in an intelligent and earnest manner, it would not be long before we would have to furnish some sort of transportation tickets to the express agents and postmasters who are at present selling money orders and who will soon have to retire for lack of business. At the end of two years their orders will not be well enough known for passage tickets, and we will then have to furnish them with bank money orders so that there will be no question but that the passengers will reach their final destination.

We have accomplished practical results. We have a uniform design for a bank money order, adopted by our committee at the close of our St. Paul convention. One of our lithographing houses in St. Paul advised me that they have already fitted out fifty-five banks with this order. Reports for them are coming in daily to the lithographing houses and inquiries concerning them are received from every State in the Union. All this notwithstanding the fact that the report of the committee who selected the design has been out only about a month. We felt that it was best to make the order as simple and as near like a bank draft as possible, for the reason that we want these orders redeemed and out of the way. We believed that the action of the Government in making their orders payable at a certain point a wise one. Their form was copied after the bank draft, and we could see no reason to make a complicated looking affair of a money order by putting on it the names of ten or twelve payee banks.

The associations in the States previously mentioned which have committees on uniform orders, are all at work, and there is a small cloud on the horizon, no larger than a man's hand, which bids fair to increase in size until enough public sentiment and feeling is worked up among the bankers to give them back-bone energy to reclaim the business lost through their shiftlessness and indifferences.

I can only say that the possibilities of this plan are greater than the casual observer would believe, and in this connection I am reminded of the old German in one of our Western conventions, who at the close of an interesting address on asset currency and branch banking, arose and in an excited manner exclaimed: "Mr. Fowler! Mr. Fowler! I have a schemer scheme as you have got," and then proceeded with an argument in favor of guaranteeing deposits in banks. The question of the insurance of these bank money orders is not a new one to those who have looked into the matter of banks issuing asset currency, and I believe it to be a practical plan that if these bank money orders can be issued they would be as good, if not better than the greenbacks of our country and would give us an elastic currency that would serve to a great degree the needs of our growing commerce. This, however, is a matter entirely foreign to the subject of the reclamation of the money-order business of the United States by our banking institutions.

To transpose a proverb and make it fit the case we can say: "There be three things which go well, yea four are comely in going—a uniform draft which is well known among men and taketh not a back seat for any; a requisition blank which girdleth the earth; a uniform

price which holdeth the trade ; and a uniform charge for services rendered our dilligent competitors."

It is our present intention, when we have once introduced our bank money order and given the people an opportunity to buy them at less than they can purchase a post office or express money order, to make a charge for every post office and express money order issued from a town which has banking facilities, cashed over the counter or deposited by a customer. Action would have been taken on this matter in Minnesota this year were it not for the fact that we deemed it best to thoroughly advertise and push the sale of these orders and get them introduced before we made a charge for our services in the cashing and transferring post office and express money orders, so that eventually we will receive our share of the profits, whether our competitors or we ourselves sell the order. This is but just, when we remember that in addition to the work involved we are furnishing the capital with which our competitors do business.

In this discussion I have entirely eliminated one fact, and that is that when the people become educated concerning the function of a bank, the deposits of the banks in this country will be increased many fold. A practical way to do this is to have bank money order slips, directing the farmers, merchants, store-keepers and factory hands to take the enclosed bank money order requisition blank to the bank and purchase a bank money order in remitting for goods sent by the house forwarding the slip. This would get these parties in the habit of going into the bank, and the banks would reap the benefit in time of the deposits of this class of people, which in the aggregate will amount to many million dollars.

It is entirely practical for us to build up a business that will impress the post office and express companies of this country with much the same awe and confusion as was evidenced by an Irishman upon his first sight of St. Patrick's Cathedral in New York city. He was astonished at the size and magnificence of the structure, and stopping in amazement, he said to his old friend Pat, who was showing him around. "Pat, this beats the devil." "Shure, that's the intintion," said Pat. If my short talk to you to-day will help to accomplish this same result, I shall be more than satisfied.

On motion, a vote of thanks was tendered to Mr. Chapman for his interesting address.

THE PRESIDENT : The following letter has been received from our old friend at Pawling, who has never missed a meeting of this association :

I had intended to attend the meeting of the N. Y. State Bankers' Association to be held on September 10 and 11, but last night I found it was absolutely impossible for me to get away owing to business engagements; consequently the National Bank of Pawling will not be represented at the meeting.

I regret exceedingly my inability to attend, and hope you will have a full attendance and an instructive meeting.

Very truly yours,

J. B. DUTCHER.

THE PRESIDENT : The following telegram has just been received :

New York State Bankers' Association, Saratoga Springs, N. Y.:

Niagara Falls extends a most cordial invitation for next year's meeting. Free hall, reasonable hotel rates, every co-operation given. Mayor and common council join in this invitation.

The committee have arranged for short five-minute speeches upon the questions which come before us in the report of the council of administration, and, following Mr. Chapman's address, the next gentleman who will occupy five minutes will be Mr. Lewis E. Pierson, speaking on the same subject.

ADDRESS OF LEWIS E. PIERSON, VICE-PRESIDENT NEW YORK NATIONAL EXCHANGE BANK.

Mr. President and Gentlemen—Encouraged by the remarkable success of banks in other parts of the country in advertising and issuing bank money orders, and seeing no good reason why a bank in New York city should not do the same and lend its active support to this movement, our bank before issuing its initial money order three months ago mailed specimens to banks throughout the country to ascertain if they would cash our money orders as readily, at least, as they did those of the post office and the express companies. The responses were most surprising and gratifying. Out of nearly four thousand replies received we were unanimously advised that they would gladly cash our orders. Answering our query as to whether they would work with other banks to have bank money orders universally used,

fully eighty per cent. were favorable, the rest having evidently not paid much attention to the subject. Of those favorable fully one-quarter were enthusiastic and many voiced pertinent points in their letters—a few of which I have picked out at random and they are, as you will notice, from all over the United States.

The First National Bank of Winsted, Conn., write :

"To show you that we have had the scheme in mind, I enclose circular and form of order which I sent out in 1897. To work well the whole country should be included."

And the circular mentioned and the form of order referred to I have here, which any member can see by stepping up to the desk.

J. D. Spearman & Company, Bankers, of Springfield, Nebraska, write :

"We perfected a bank money-order system of our own in the month of March, 1900. The first order sold was our No. 1, dated April 28, 1901. Since then we have sold over two thousand. We received for them on an average of 8½ cents in exchange, or in other words, we received forty-five cents for every \$100 in money order exchange that we sold.

Our orders are all sold for small amounts, none over \$50. As a side issue it has made us \$100 per year net since we commenced. Of course that is not very much, but it is just \$100 that we would not have had without the money order. Besides, we have sold a great number of drafts for larger amounts to people who were drawn to us by the money order advertisement, and have made a considerable number of customers through that agency. As we only have two correspondent banks, and those in the West, we are not in a position to give a wide range of places of redemption, but we have never had an order discounted from Maine to California and from the Gulf to the British Possessions. We have sold them to go everywhere. Express companies have done the advertising; now we can, by placing money orders on our counters, reap the benefit. We have always found that it paid to give people what they wanted."

The Citizens' Banking and Trust Company, of Sandusky, Ohio, write :

"We have been selling our drafts on New York for a long time as money orders, and by sending out the enclosed circular have worked up quite a business."

Sioux Falls Savings Bank, of Sioux Falls, South Dakota, write :

"We realize that a great many people seem to think, before an instrument is good, it must have the word 'order' written on it; and I also realize that if a person could sell these things, there is a whole lot more money in it to the bank issuing the same than in the plain, straight draft."

The First National Bank of Loudonville, of Loudonville, Ohio, write :

"We have for some years looked with amazement upon the inertness of the State banking associations along the line of protection to the banking interests, and have written letters urging that some action be taken and have refused to join the Ohio association on that account. Uncle Sam and the express companies are the greatest 'kickers' on earth, and are enabled to carry overdrafts by country banks bearing the burden. By all means push the matter and we are with you."

The Inter-State National Bank, of Kansas City, Kansas, write :

"I believe so far as it goes it is a good idea, but it is too limited in its scope. Money-order systems as adopted by the associations in Minnesota and possibly California hit the nail on the head. In other words, I believe that every member of the bankers' association of certain States should be willing to cash at par any check upon any other member of the State association, for this is practically what is accomplished by express money orders. You have no doubt attended many conventions of bankers' associations, both State and National, and if any such conventions has ever adjourned without 'resoluting' against express and post office money orders I don't know it, but all without success. If bankers all over the United States could take unanimous action, there could be no question as to the result."

The Exchange Bank, of Glendive, Montana, write :

"Express and post office money orders have taken eighty-five per cent. of the bank's business in this line, and the only drafts issued by us in this line you speak of are from our regular customers where no charge is made for same. We should be very happy indeed to get this business in the hands of the banks of the country, where it belongs. We will do anything in our power to bring this about."

The Weleetka National Bank, of Weleetka, I. T., say :

"I have been thinking of this matter for some time, and have had the fact demonstrated to me time and time again, owing to the fact that the post office in this town is located in the rear of our banking-house, and I know of time after time that parties have come to the bank to get their checks cashed, then walked directly to the post office and buy a money order. Therefore you see we have had ample opportunity to fully realize the necessity of a money-order system, and will gladly do what we can to advance the cause."

The Dominion National Bank, of Bristol, Va.-Tenn., say :

"The Tennessee Bankers' Association adopted the plan and appointed a committee instructing them to have necessary forms, posters, etc., prepared and distributed to members in order to put the plan under way as soon as possible.

The Virginia Bankers' Association adopted a similar report and passed a resolution placing the matter in the hands of the executive committee with power to act.

The scheme contemplates the use of money drafts, uniform in appearance, to be used by all banks who are members, and to be issued and handled by them in the same manner as

their regular New York drafts or other exchanges are now being handled, requiring no additional accounts or entries other than they now make in issuing their New York drafts or other exchanges.

The banks do not have to provide extra stationery—keep no extra account—their work is not increased, and they will enjoy an increased sale of exchange because of the united efforts in advertising.

It is better to sell, advertise and label our exchange for these small remittances, bank money orders (which have been found successful) than to consume time and patience in attempting to explain and convince money order remitters that a draft is the same thing but better than a post office money order.

The Bank of Equality, of Equality, Ill., say :

"I have advertised bank drafts as money orders for the past seven years, and believe I am the first to do so."

THE PRESIDENT : The next speaker upon this subject will be Mr. E. O. Eldredge, after which the association will be ready to listen to remarks from any other member.

ADDRESS OF E. O. ELDRIDGE, CASHIER OWEGO NATIONAL BANK.

Mr. President, Ladies and Gentlemen—That the bankers of the State and city of New York are clever, that they are astute, that they are able in every walk of life, and second to none in the world in the pursuit of the avocation which they have chosen is, I believe, a statement which none will attempt to gainsay.

They are masters in all arts connected with and pertaining to that which "makes the mare go," whether she have a tail or not.

They are able to finance a railroad or a Government building; they are, and have to be, equally able to judge the quality of a lead pencil.

The idea which I wish to convey is that the banker of to-day is not only a man of breadth, able to conceive large things, but is as well a man familiar with and not above attention to the smallest detail.

This brings me to say that somewhere in his perspective the banker of New York State, in company with most of his fellows in the United States, has failed to comprehend the importance of and to get hold of one of the things which is and should be purely a banking function—namely, the money order.

He has allowed to grow up under his very eyes and nose, until it has become an eye-sore and a nuisance, a system for the transmission of funds which is popular with the public and profitable to the projectors, while he sits by and lets the other fellow get the revenue for the service which is and by right ought to be properly his own.

We have no quarrel with the express companies, and certainly none with our great and good Government, of which we are a part.

My understanding is that the express companies' enormous money-order business is the evolution of an attempt to be useful in a way which some clever mind suggested as being possibly of advantage in a narrow field.

We have no thought of the vastness of to-day's operations in this line, nor the undertaking to usurp a banking function. Therefore, I say that we, as bankers, have only ourselves to blame for not taking advantage of what has laid and does lie at our very doors.

The gentlemen who have spoken have given you intelligent information as to what has been accomplished by some individual banks and by concerted action on the part of certain State associations. I simply want to say further that as soon as you come to give serious thought to the subject I think you will find that the real secret of the success, particularly of the express companies, in the issue and sale of money orders, is in the name. A money order is known to everybody. A bank draft or exchange on New York is known to comparatively few. A check is the privilege of him or her who has money to deposit in banks. The people who buy money orders are largely strangers to this privilege.

The question arises, shall those of us who choose to do so issue our individual bank money orders, making such arrangement as we can for their payment at certain points, or will we as a State association formulate a plan which shall have uniformity, be approved by the association, and therefore by every loyal member of the association who would be glad to see his creature succeed and would be twice glad of the increased revenue to himself.

This latter seems to me to be the wise and economical method.

THE PRESIDENT : The matter is now open for general discussion by any member.

C. E. LEAVY, of New York : I have listened with a great deal of attention to what has been said on this subject. That the money order system is an excellent one and will alike be beneficial not only to the banks, but to the people at large, is agreed by us all ; but the trouble is that the money-order system, like a great many

other systems in vogue, does not meet unanimity of action among the banks. In order to make this system a success, there should be an agreement between all the banks of the country that they will cash these orders at par. There should also be a regular form adopted by all. If this were done the banks throughout the country would not only render a great service to their customers, but they would receive deposits from many people who keep their deposit either locked up or put away where they are not available and where they are not of any merit. I think the association should strive to bring about a system of money orders, and that the secretary should address a communication to the various members of the association and see if some plan cannot be devised by which this may be brought about.

H. L. CRANDELL, of Jamaica: I would like to make a suggestion here along the line of the remarks which have been made, all of which, I believe, are in the right direction, but yet they fall a little short in one particular. Any action that is contemplated by the bankers individually, although they may co-operate and agree in the convention to cash each others' drafts, will fall in time of stress, when the express companies' money orders and the post office money orders become most popular. I think Mr. Chapman can recall the time when he and his bank were not very particular to cash drafts on neighboring banks. I know that was the trouble in a large part of the country, and during that time the remark was often made that no express money order had ever been defaulted on or any post office order; and to my own knowledge people would go to the post office and to the express offices and buy money orders and put them in their pocket rather than to deposit the money in bank. The reputation established by the post office department and express companies for promptness and safety with which the business has always been handled has always been the strong point in developing the business that they are now reaping the benefit of. I think any system, in order to successfully compete with the post office department and with the express companies for this money order business, must combine some plan of redemption of money orders of a bank that has been closed temporarily or that has become insolvent.

JOSEPH CHAPMAN, Jr.: Allow me to say in reply to what the gentleman has said, Mr. President, that if we delayed action on any matter until everything was just exactly to our own liking, and to what we thought was the ideal point, nothing would ever be accomplished in this world. We must get at this proposition and let it evolve the way other things have done in this country. When the time comes that a demand is made that these orders shall be guaranteed they will be guaranteed; but I think at this present time, if we want to delay action on this matter and get the people suspicious about our banking institutions, we want to make important this one fact that has been spoken of by the last speaker—a fact that has been emphasized very strongly by the express companies. I have not the statistics of failed banks, but I think we can all agree on one point, and that is that the number that have failed and caused a loss to their depositors has been infinitely small in comparison with the number of banking institutions in the country, and when we consider that those money orders are to be limited to the sum of \$50 or \$100, the loss, in case some individual bank should fail, would not be very great; and, as I stated in my talk here, I believe it to be an entirely practicable and feasible plan that these drafts can be insured. In fact, one of the largest assurance and fidelity companies in the country has recently brought out a check of this very kind, which will be paid at the bank at which it is issued, but they intend to charge an exorbitant price for the drafts, and it will only be popular among people who travel. The kind of people that I would like to reach is the class who are paying for goods in the cities. That is the kind of business I want to reach. If anybody is suspicious of a bank money order, let him go and get the express money order, but we will reach nine-tenths of the business of the country if those orders are sent out by job-

bers to their correspondents all over the country with the request that they take those little slips to the bank. I believe what the last speaker suggested is important, but I do not think it is the all-important thing at this time. There is no use of insuring anything until we get something to insure.

H. F. SAMMIS, of Huntington: There is an old adage that between two stools a body comes to the ground. In other words, that what is everybody's business is nobody's business. Now, to expedite matters on this subject, I move that a committee of five be appointed by the president to consider this matter and report something back upon which definite action may be taken.

THE PRESIDENT: The Chair must rule that that motion will come up more properly at the session to-morrow.

G. W. HANNAHS, of Adams: I would like to correct one statement made by the gentleman from Jamaica. He stated that express company money orders were never defaulted. Now, I live in a small town of about 1,500 inhabitants. We get at our bank a great many of these express money orders, and I never have sent those orders in to the express office, when they exceeded fifty dollars in amount, that the express office was able to pay them at once. Less than two weeks ago I sent in two orders to the express company for collection amounting to less than \$36, and they were not able to pay them; they hadn't the money at hand just at that moment. Why do not the banks treat those express orders as they treat checks? In other words, protest them.

The money order that the Pulaski National Bank adopted is, it seems to me, the most feasible that has been presented yet. It is practically a New York draft; the New York correspondent gets the benefit of it as well as the issuing bank. Now, if there is a committee to be appointed for the purpose of formulating some style of money order, I would suggest that they confer with Mr. Clark in regard to these orders. I think there ought to be something adopted here by which our members can refuse to cash these express orders unless they receive payment for them just as promptly as they would expect to receive payment of a foreign draft. By doing something of that sort, we will drive the express companies out of the money-order business.

A. H. CURTIS, of New York: I have been in the bank business about twenty-seven years, and this is my first appearance at a bankers' convention, and I hesitate to make any extended remarks; but a matter has suggested itself to my mind which I think would be of some interest while we are considering this subject, which, if we were to undertake it in earnest, would be of great benefit to every bank in the country. It is the idea of having, not exactly a black list, but a bureau of information, in regard to people who come to us to do business in one way and another. I think this is a matter that the executive committee of this association should take into consideration and look into with a view to developing some plan by which such a bureau might be established.

I might say that a few years ago, when I was paying teller of the Bank of New York, a man came in one day with a check for \$21,000, which he wanted cashed in twenty-one thousand dollar bills. Of course I knew the man, and as I handed out the money to him he turned away without waiting to count it. The check went through the clearing-house all right, but the day afterwards the Washington bank on which it was drawn closed its doors. That man was John H. Silver. Years afterwards he got William J. Quinlan, of the Chemical Bank to loan him over \$200,000 on securities which he was floating and which turned out to be utterly worthless, and which cost poor Quinlan his position in the bank. Within a year or so this promoter got over a million dollars from different banks on worthless collateral. Yet, within a few weeks thereafter he was able to go into one of our big trust companies and get a note for \$75,000 discounted. So, you see, if we had had

a little list of such men, we could all have been informed at a glance what that man's record was. Do you suppose George H. Pell could have closed up the Sixth National Bank if they had known what his record was?

There are scores of just such instances that I could give you, all or many of which could have been avoided if we had such a bureau of information as I speak of, and which could be instituted if we got together and chipped in \$15 or \$25 apiece to employ a good man to keep a record of these men, whether they be promoters or shovers of worthless securities, or what not.

THE PRESIDENT: Is there any further discussion on any of the subjects that have been brought out? If not, I would beg to state that we are honored to day in having with us Mr. Perry, of Jacksonville, Fla., and we also have with us Mr. B. J. Brown, of Little Rock, former president of the Arkansas Bankers' Association, and I hope the members of our association will endeavor to make the visit of these gentlemen as agreeable as possible.

The convention then took a recess until Friday morning at 10 o'clock.

SECOND DAY'S PROCEEDINGS.

FRIDAY, September 11, 1903.

The second day's proceedings were opened with prayer by Rev. William Durant, D.D., of Saratoga Springs.

THE PRESIDENT: The first order of business this morning is reports of special committees. The only special committee to report, I believe, is the auditing committee. Is Mr. Donald, the chairman of that committee, present? He does not seem to be here. Therefore, we will pass that report for the present.

Acting Secretary Pierson read a letter from F. J. Seaver, Bank Superintendent Kilburn's private secretary, announcing Mr. Kilburn's inability to be present at the convention.

THE PRESIDENT: I have received a communication from a well-known law firm in New York, who are counsel for our bank, in which they have raised a very important question, which I think we can refer to the council of administration for consideration. I will ask the secretary to read it.

Acting Secretary Pierson then read the following:

September 9, 1903.

Hon. Stephen M. Griswold, President N. Y. State Bankers' Association, Saratoga Springs, N.Y.:

DEAR SIR: A case reported in 171 New York Reports, at page 219 (Critten vs. Chemical National Bank), shows the possibility of a bank being mulcted for damages arising out of a series of raised checks.

A clerk filled out checks to the order of creditors of his employer, presented them to his employer for signature, and then with acid erased the name of the payee, inserting the word cash in its place, and raised the amount of the check. He then drew the money and paid the bills in cash. Each time the pass-book was balanced it was verified by this same clerk, and this continued for about two years, when, he being absent, and the duty devolving upon another employee, the fraud was discovered.

The bank was obliged to make good the greater part of the money thus stolen.

This is a situation which banks are obliged at all times to meet, and are held liable by the courts unless they can show negligence on the part of the customer.

In order to avoid this danger why not bring up for discussion the passage of a statutory amendment fixing a time, for instance, ninety days, within which claims of this kind could be prosecuted against banks, the time to run, say, from balancing of pass-book.

This would tend to prevent a large loss, as a bank could protect itself in a measure by insisting upon frequent balancing of pass-books.

THE PRESIDENT: It would be a great protection to the banks, I think, if the Legislature should amend the law as suggested, and it seems to me that this is a

matter which should very properly be referred to the council of administration for consideration.

EDWARD ELSWORTH: I move that it be so referred.

BRADFORD RHODES, of New York: I second the motion.

MR. ELSWORTH: Now that the motion has been seconded, I desire to say just a word on the subject. I happened to have some matters pending before the last Legislature, and I was in Albany several times during the session, and I know it seemed to be utterly impossible to get through any legislation on behalf of banks. Now, the Savings Banks Association have a man in Albany all the time while the Legislature is in session looking after its interests, and I think this association ought to do likewise. I would, therefore, couple, with my motion a recommendation that that matter be also considered by the council of administration.

LEO SCHLESINGER: I would like to add a few words to what the previous speaker has said from personal experience that I had last winter in Albany. I went there before the committee on banking regarding the question of a reserve to be kept by the trust companies. I went there single-handed and alone. I met against me quite a number of representatives of trust companies who were trying to oppose what I was trying to do.

I certainly think if this association should employ a competent man in Albany to look after the interest of our banks it would be a great advantage to it.

The matter spoken of in the letter that has just been read is something that we need to give our immediate attention to. We had a case that came up in our bank last week. A corporation, where the president and vice-president were each empowered to sign checks, and when the president came to open the account he introduced the vice-president to draw money. The vice-president being dishonest issued a lot of checks to fictitious names, raised some of the checks and came to the bank with the indorsements of the parties to whom these checks purported to be made payable, and drew the money, amounting to some \$1,700. The corporation discovered the fraud on the part of its vice-president, but by reason of his having been introduced to us the way he was by the president, and being one of the principals, we were exempted from paying back any of his speculations.

I think if a law could be established whereby after a pass-book has been balanced the customer must, within a certain reasonable period, notify the bank of any irregularity, a great deal of money could be saved to the banks.

This organization should by all means have some person at Albany to look after its interests. The council of administration have plenty of other work to do, but they could employ a person for the purpose. I think by imposing an extra tax of five dollars or so on each bank in this association we could engage a very competent man to look after the legislative end of affairs.

THE PRESIDENT: Is there any further discussion of the motion that has been made? If not, I will put the question. All those in favor of the motion will say aye; those opposed, no. Carried.

I see that Mr. Donald has come in, and I will call upon him to present the report of the auditing committee.

JAMES M. DONALD, of New York: Mr. President, we have handed up to the Acting Secretary our report, which I will ask him to read.

ACTING SECRETARY PIERSON (reading):

September 11, 1908.

We hereby certify that we have examined the accounts of the Treasurer of the New York State Bankers' Association and the vouchers of the expenditures therein stated, and find them correct.

(Signed)

JAMES M. DONALD, F. E. LYFORD,
F. C. HAVILAND,

Committee.

On motion of David Cromwell the report was received and the committee discharged, and the report of the treasurer was approved and placed on file.

THE PRESIDENT: The next business in order is the fixing of the place for holding our next annual convention.

On motion of Leo Schlesinger, the council of administration was empowered to select the place for holding the next convention, and it was also suggested that the time for the convention be fixed about a week or ten days earlier than this year's meeting.

THE PRESIDENT: It is usual at this time to pass a vote of thanks to the gentlemen who compose the committee of arrangements. They have worked in season and out of season untiringly and faithfully, and they prepared every detail of this convention, which I believe is one of the most successful we have ever had.

THOMAS YOUNG, of Huntington: Following the suggestion of the Chair, I move that the thanks of this association be and they are hereby extended to the committee of arrangements for their most splendid work in arranging and carrying out the various details which have made this convention one of the most pleasant ever held.

The motion was seconded by E. A. Groesbeck, of Albany, and was carried by a unanimous vote.

THE PRESIDENT: Although we are much disappointed in not having Mr. Kilburn here, we have Mr. Elliott C. McDougal, of Buffalo, who has consented to step into the breach at the last moment, and he will speak to us on the subject upon which we had hoped to hear from Mr. Kilburn. I take pleasure in introducing Mr. McDougal.

ADDRESS OF ELLIOTT C. MCDUGAL, PRESIDENT OF THE BANK OF BUFEALO.

Mr. President, Ladies and Gentlemen—Questions involved in the practice of paying interest on individual deposits are not questions that can be determined from first principles. Concerning them no man may say to another "I am right, you are wrong." Should one say the question, "Is it right to steal" is a debatable one, that the question "Is it right to commit murder" is a debatable one, no one would hesitate to say, "you are wrong." Should one say the question "Is it right to lie" is a debatable one, no one here would hesitate to say, that although from time immemorial casuists have held that under certain conditions to lie is not only permissible, but a duty, the consensus of opinion is, and always will be, that to lie is wrong. Turning to another question that confronts us daily, we have no difficulty in calling to mind many concerning which practically no difference of opinion exists.

Not so with the question before us. Between the position of the banker who says that to pay interest on any class of deposits is bad practice, and unequivocally wrong, and the position of the banker who says that deposits should be taken at any rate of interest offered by a competitor, that no business at any price should be allowed to get away; between these extremes lie numberless other positions. Occupying these positions will doubtless be found at least ninety per cent. of the gentlemen here to-day. Now, let any gentleman of this ninety per cent. state his exact position, covering fully its essential points. What percentage of this audience would exactly agree with him on every point? Would ten per cent.? You doubt it. But there is one point on which I will assume we all agree, and which we can take as a basis for further discussion. To pay interest on daily balances is wrong in principle, and unsafe in practice. But, you may say, it is not necessary for us to come to Saratoga to hear this. We have known it ever since we first took up banking as a profession, although we confess that our practice would never have caused our knowledge to be suspected. Yes, we have known it so long, and we have become so accustomed to the situation, that we have come to regard it as something permanent, something much to be regretted, but unchangeable.

Now, if any discussion can convince us that we are mistaken, that it rests with ourselves, (and with whom also does it rest) if not entirely to change at least materially to improve these conditions; if we can be brought to realize that the question is not a dead one, not a purely academic one, but that it is a live question, a vital one, and not a hopeless one, our time here will not be wasted. We all know why we pay interest. We all know the various forms of competition which make that interest excessive. Practically, all know that often we are forced, against our better judgment, to make concessions that we would not otherwise make. It is idle to discuss the question, which, with a branch banking system such as all other civilized countries enjoy, we should have drifted into our present unscientific banking methods.

We must deal with conditions as they are. There is no prospect that Congress will even carefully consider any bill radically changing our banking laws. Should the improbable happen, should Congress pass a bill authorizing National banks to have branches, most of us would either lose our positions or become subordinate officers in larger banks, probably with reduced salaries. I do not think you would thank me for even hinting at such a possibility. I would be in the position of a colored preacher who was nearing the conclusion of a most successful revival season, during which many converts had been made. In the midst of a most eloquent peroration, which apparently very much impressed his hearers, and was finally convincing a number who up to that time had been obdurate, he most inadvertently touched on the sin of chicken-stealing. In the language of one of the audience, "It frowed a coldness ober de whole meeting."

It is not equitable, and it is not safe, that to the expense involved in handling a heavy mercantile account, should be added a large interest charge, that the narrow margin of profit on such an account should be cut down, or more probably entirely wiped out, or as is often the case converted into an actual loss. Some time since a banking officer was approached by a gentleman who wished to change his bank account. He had stock in the bank where he kept his account. He had received no dividends for several years, did not like the management and preferred to transfer his account, which was a very active one, providing he was granted terms equal to those he then enjoyed, namely, three per cent. on balances and foreign items, of which he had an unusual number, free. To an inquiry as to how he could expect dividends from a bank doing business on such terms, he gave no satisfactory answer, but when his bank failed he had no difficulty in driving a hard bargain with a competitor.

More than once a bank in this State has lost accounts to competitors because it would not allow four per cent. on daily balances and foreign items free. Does any gentleman here believe that there is anything but loss in such an account? Does not every gentleman here believe that the more such accounts a bank has the worse off it will be at each year's end? But loss does not end here. Such loss, although a constant drain on the life-blood of a bank, concerns only its stockholders, and rarely leads to a catastrophe by which depositors suffer. Such methods lead to the accumulation of a line of deposits beyond what the legitimate needs of the bank's borrowers require. The bank thus develops a poorly-balanced business. The interest charge on the deposit line is constant. The bank must employ its deposits, must employ them at a good round rate of interest, must employ them fully at all seasons. Therein lies the danger, and no theoretical danger, but a real and ever-present one, as I know from my own personal observation of the experience of a number of banks in a city of this State: which as my fellow delegates from Group I can testify, went down in ruin; all of which might have been running to-day had they paid a low rate of interest or none, and had they held only deposits enough to care for their legitimate business.

A large deposit line, attracted by high interest rates, is a source of weakness, not of strength. One of its consequences is constant temptation to grant excessive lines of credit, resulting in the gradual accumulation of a line of dead paper, practically the forcing of the bank into partnership with many of its customers; with what disastrous results most bankers know. A bank with such a deposit line cannot discount exceptionally good live paper at low rates: such paper naturally seeks the cheapest market as surely as water seeks its level, leaving to the bank a poorer class of dead paper. Very recently a case came to my knowledge in which certain excessive and unsafe lines of credit were granted by a certain bank to outside concerns having no natural relation to or connection with the bank's ordinary business and which caused losses enough to absorb an entire year's profits. The granting of these lines of credit could only be accounted for on the theory that the increase of deposits attracted by high rates of interest inspired by jealousy of the growth of the total figures of a rival, called for an interest charge producing a constant temptation to take undue risks. From that temptation the banker who pays no interest or only such interest as is necessary to provide for the needs of a carefully-conducted business, is free. When we shall adopt as our motto, "Not how large, but how good," we shall take the first step towards improvement.

THE MANIA FOR BIG FIGURES.

What is the chief end of a banker? To publish larger totals than his neighbor? You will not answer yes, but the practice of many of us answers yes. At the present time there exists among bankers a mania for what we call big figures. We want big figures in a hurry, and the surest and quickest way to get them is to pay a higher rate of interest than our neighbors. Our neighbors soon know our rates, and generally meet them. Then we raise again, and if we are really enterprising modern bankers, we keep up the process until we get the deposits. Right here let me say that we should welcome everything modern in the way of lighter and healthier offices, devices to facilitate the transaction of business and to enable us to give our dealers the very best service. But as to the vital principles which underlie financial transactions, there is nothing modern. We know no more concerning them than knew the men

who centuries ago founded the Bank of Venice, and we know as much as will be known by our successors hundreds of years hence. To show that there is little but glory in "big figures" subject to a high interest charge, take a deposit of \$1,000,000, on which a bank pays four per cent.—and four per cent. is no uncommon rate—admit that the accounts composing it are inactive, of the class concerning which it is frequently argued a bank can afford to pay four per cent.; and that the expense of keeping them is nominal. This money must be employed and the expense of keeping officers and discount clerks is not nominal. Certainly the risk is not nominal. Suppose we allow only twenty per cent. for reserve, which is low enough, and, in many cases, too low. The calculations work out as follows:

\$800,000 at six per cent. for one year (and many discount lines do not average that) produces.....	\$48,000
\$200,000 reserve, half in vault and half with reserve agent at 2 per cent.	2,000
Making total return.....	\$50,000
\$100,000 at four per cent. costs.....	40,000
Leaving as a year's apparent return on a deposit line of \$1,000,000.....	\$10,000

Out of this must come its proportion of expenses applicable to officers and discount departments, all bad debts in the \$800,000 discount line, and its proportion of dividends. What is left goes to surplus. With a twenty-five per cent. reserve the apparent net return would be only \$7,500. Will any gentlemen here claim that this is safe banking? Now, take an active account, add the expense of keeping it, and the cost of foreign items taken at par, and how much worse is the result. As to the right of a bank to charge for its services pure and simple, that question does not come within the scope of this article, and besides we have forgotten that the services of a bank were ever considered worth anything.

It is probable that the present exceptional conditions in the money market will not long continue, and that the average return on good live discount lines will sink to five per cent. With a four per cent. deposit line that would mean ruin, and unless interest rates were reduced not merely to three per cent., but below, the situation would remain practically as shown by the above calculations.

I have made it a point from time to time to talk with bankers from all parts of this State. Some think that no interest should be paid on individual deposits. They have an ideal which, if it could be realized, would make banking much safer, and would without doubt be for the good of every business community. Others think that to pay interest on good quiet accounts is not only permissible but desirable. All appear to agree that no interest should be paid on active checking accounts, or, in other words, on daily balances. All agree that the practice of paying interest on deposits as it exists to-day has grown into a gigantic abuse, which, speaking soberly and without exaggeration, seriously threatens the solvency of many of our banks.

CORRECTION OF EXISTING ABUSES.

Now, as to the remedy, and now I approach dangerous ground; so long as one only criticizes, he is safe; let him propose a remedy, and he becomes a fair object of attack. We are indifferent to the man who pulls down, but woe to him who attempts to build.

While we should never lose sight of our ideals, of which bankers unfortunately have too few, as practical bankers, looking for results, we must first consider them. We must not allow our ideal, however just and high, to blind us to what may be done in a humbler and more practical way. As we all agree that the present practice is dangerous, that it has led to disaster in the past and will, if persisted in, lead to fresh disaster in the future, what shall be our standard? The ideal standard is "no interest on individual deposits." On that ideal we cannot agree. Let us adopt this most reasonable and practical standard, "excessive interest to none, no interest on daily balances."

Bankers should have some rule of conduct. One of them should be that no unfair discrimination should be shown. The above standard, adopted and thoroughly carried out on this principle, will work great improvement, at the same time we will have the consciousness that we are dealing honestly with our customers. If we have not ordinary common sense enough to do this, I have only one more remedy to propose, which is in the nature of a forlorn hope. Treat all our accounts alike. Pay interest on daily balances, on all. Then, as balances are paid for, and as one man's money is as good as another, and as large balances receive an equivalent in interest, make collection rates uniform to large and small alike. I ask you, is this not at least consistent? So radical a change would put such a burden on banks that the average rate of interest allowed on the total deposit line would inevitably be quickly reduced or a large proportion of our banks would fail. There is one thing to be said concerning this plan. It would operate. While banks are slow to follow the lead of one of their number who propose to reduce the amount of the annual interest charge, they would,

unless the present is no criterion, follow with the utmost alacrity the lead of one who proposes to increase it.

Reverting to the standard proposed, I have no hesitation in saying, without fear of contradiction, that if every banker will adopt that standard and will conduct his own business according to the dictates of common sense, regardless of illegitimate competition, the problem is solved.

THE PRESIDENT : I stated yesterday that as goes the Empire State so goes the nation. This convention has been honored by having a representation here from all over the United States ; we have a gentleman from Arkansas ; we have a gentleman from Florida ; we have a good representative here from Minnesota, and now we are to hear from a gentleman from the State of Illinois, Mr. C. O. Austin, Vice-President of the National Bank of North American, of Chicago, whom I take pleasure in introducing to you.

FIDELITY INSURANCE.—ADDRESS OF CHAS. O. AUSTIN, VICE-PRESIDENT OF THE NATIONAL BANK OF NORTH AMERICA, CHICAGO.

Indemnity bonds of fidelity companies, guaranteeing the faithful performance of duty of those occupying positions of trust in banks, have come into general use in recent years and are rapidly superseding all other forms of surety for this purpose. Formerly the bank officer or employee who was required by his employer to furnish surety for his acts could do so only by one of two ways—either through his relatives or friends, who were called upon to sign a bond of indemnity, or through a deposit of cash or negotiable securities with the employer. Manifestly, both plans had very great disadvantages. To make a bond by deposit of any considerable amount of cash or securities would be beyond the ability of an ordinary employee, and even if it were not he would be placed at the disadvantage of being unable to control his own property.

To furnish a bond signed by relatives or friends naturally places the person so bound under obligations of a nature that one handling funds of others should not incur. Bank employees should not have business obligations to any one save their employers, and the person under bond signed by individuals is certain to be called upon sooner or later by some of his bondsmen for favors and services which can only be rendered at the expense of the employer, and the higher and more responsible the position held the greater will be the favors sought, and the more costly to the employer will be the granting. Many bank failures have grown out of the indiscriminate making of loans and the granting of overdrawing privileges to their bondsmen by the Cashier or other employees in authority.

There are many bank officers whose sense of the highest integrity is beyond any question, however, and yet who have not the firmness of character to deny to their bondsmen favors which under no consideration would be granted any other person, all the while knowing that in doing so they violate the very duty to insure the faithfulness of which their bonds have been given. A man may be honest through principle or fear of law, but unless nature has endowed him with a firm purpose to do only what he conceives to be right, without fear or favor, he has no business behind a bank counter, for all the surety bonds in the world will not keep him out of trouble.

Another objection to personal bonds is that death may at any time overtake any of the signers, necessitating the obtaining of new or additional sureties. Again, through financial reverses, any or all of the sureties on such bond may become embarrassed to the extent that the employer would deem his interest best protected by the execution of a new bond. In case of defalcation the employer often finds that the enforcement of the terms of the bond against sureties of high social or business influence would result in loss greater than the amount of shortage ; hence the defaulter under a personal bond is seldom prosecuted. Friends of the defaulter usually reimburse the employer, whose chief aim generally is to protect himself against financial losses ; consequently the criminal retains his freedom, to the injury of society.

ADVANTAGES OF CORPORATE SURETYSHIP.

Conditions very much differ where bonds are issued by fidelity companies. Being purely a commercial transaction there is no sense of obligation on the part of the employee and no one to call upon him for unusual favors. The fidelity company does not die and seldom fails, and the conditions imposed by the various States upon them before they are permitted to transact business are of such a nature as to supply the greatest possible degree of protection to the creditors.

Banks will not hesitate to sue a fidelity company, if necessary to enforce the collection of claims where such a procedure against individual bondsmen is seldom resorted to. If a

surety company sustains losses through the misconduct of its risks, it is sure to follow the defaulter, and sooner or later to apprehend him and secure his conviction, and the knowledge that the company will relentlessly prosecute all persons who have proven dishonest while bonded by it, is in itself a restraining influence of the greatest value.

RATES CHARGED BY THE COMPANIES.

The principal obstacle in the way of the universal adoption of fidelity company bonds has been the high rates heretofore charged by the companies. It is reasonable to suppose that bonds on bank employees are the very best class of fidelity risks, and there is little doubt that, considering the small percentage of loss sustained through this branch of their business, the surety companies have in many instances obtained unreasonably high rates.

The keen competition in this business has necessarily resulted in more or less rate cutting, and as a consequence there are as many different rates being charged for the same class of risks as there are companies in existence. The desire to write business has resulted in many agents writing two or more policies for as many different banks in the same community at different rates, although the character of the risk involved may have been identical in every respect, and naturally bankers have sought some means of bringing about an equalization of the charge for this service. Had all the companies charged and obtained equal rates, there would doubtless have been very little dissatisfaction, but while some of the companies were charging forty and fifty cents per hundred dollars, others have written the same class of bonds at twenty and twenty-five cents per hundred dollars, and a careful investigation of the statements of the different companies has failed to show that those charging the higher rates offer any safer bonds than the companies writing the same bonds at about half the cost.

A few years ago the Missouri Legislature passed a general bank act, one of the provisions of which required that all Cashiers and Assistant Cashiers of State institutions should be under bonds. The law provided for a system of examination modeled after the examination of National banks by the Federal Government, and this provision of the statute was rigidly enforced, with the result that several hundred bank officials, who, prior to that time, had not been under bond, were required to furnish their institutions with some sort of indemnity. Without any power to define the character of the bond which these employees were obliged to give, still the State officials recommend those of fidelity companies as being the more desirable, for the reasons hereinbefore set out, with the result that the State became an excellent field for the agents of the companies soliciting this class of business. Competition, of course, was keen and the cutting of rates general.

This inequality of rates on so high a class of business received a great deal of attention in the meetings of the State Bankers' Association, and various means of bringing about an equalization was considered. After carefully investigating several schemes for accomplishing this end, the association secured a proposition from a prominent fidelity company agreeing to enter into a contract for furnishing bonds at a uniform rate to members of the association, provided the association would use its influence for the securing of the business of its members for this company. In brief, this agreement provided that the surety company should appoint the person holding the office of secretary of the association as its agent for all business pertaining to banks and originating in that State, furnish a uniform rate acceptable to the executive council and as low as that offered by any other strong company, and allow the secretary of the association the regular agent's commission for writing the business. The association on its part agreed that its secretary should actively engage in the working up of business among its members, on condition that the company would submit its assets and liabilities to the personal examination of a committee selected for the purpose of determining its solvency by the association. To this the company agreed, and a committee consisting of three of the most prominent and skilful bank officials of the State, one of whom had served as a National bank examiner, was appointed.

This committee secured the services of the actuary of the State Insurance Department and he, together with the committee, proceeded to the home office of the fidelity company, where a careful and searching examination of all of its assets and checking of its liabilities were made. The committee returned a report to the executive council of the association recommending that the agreement referred to be accepted. The executive council then employed an assistant secretary, and immediately began the work of making a thorough canvass not only of its own members, but of all banking institutions doing business in the State. The agent's commission, which the company has agreed to pay the secretary on all business written through his office and remaining after the expenses of conducting the business were defrayed, was turned into the treasury of the association under a special fund known as the reward fund, the object of which was to provide means for the payments of rewards for the apprehension and conviction of all persons defrauding or attempting to defraud any member of the association. The benefits of this reward fund were not extended to banks not members of the association. The association then made an arrangement with a

leading detective agency for the apprehension of all persons implicated in crimes against its members. The members of the association were quick to see the advantage of the extremely low rates offered to it, and also of the protection offered by the arrangement with the detective agency and the existence of the reward fund which made such an arrangement possible. The contract with the surety company was entered into in July, 1900, and from that date to this the association has continued to handle the surety business of its members in a most successful manner. At the annual convention in May, 1903, the association had outstanding \$4,500,000 of fidelity bonds written through its office, and its reward fund amounted to \$18,000 after the payment of all expenses and rewards claimed.

Because of the large number of banks in the State, many of which are situated in very small towns, remote from the police influence of the larger cities and in sections offering unusual opportunities for criminals to make good their escape, it is not surprising that formerly there were constant attempts made to defraud and rob banks. These attempts were particularly frequent along the borders of the State, where criminals could quickly escape into some other State before the machinery of the law could be set in motion to apprehend them and in these sections where mining was extensively carried on and which supported a large floating population, and where explosives of high power could be obtained from most any country store. It is noticeable that the number of attempts has steadily decreased since the present system was inaugurated notwithstanding the constant increase in the number of banks. As soon as an attempt is made to crack a safe, or as soon as a forged or altered check is passed upon any member of the association, that member immediately communicates by telegraph with the secretary, who in turn at once telegraphs the detective agency and the police departments of the various leading cities, and by the first mail sends out hundreds of circulars describing the crime and the criminal, if possible, and offering a suitable reward, the size of which is determined by the gravity of the crime. One of these circulars is put in the hands of every bank in the State, and banks in adjoining States, if deemed advisable, and quantities of them are sent to the police department of every city, and copies to the sheriff and other police authorities of each county, all of which entails a great deal of expense and would not have been possible except for the reward fund. So quickly and methodically is this work done that a criminal rarely escapes and it has been noticed that attempts against members of the association are becoming less and less frequent and the criminals devote their time to those banks that are not members of the association. Every member of the association is provided with a metal sign reading "Under the Protection of the Missouri Bankers' Association," and this sign is hung in a conspicuous place. The sense of protection afforded members induced most of those banks which had heretofore neglected to join the association to send in their membership fee and have their fidelity bonds written through the association, so that the membership of the association has increased until 735 banks out of a total of 812 in the State belonged at the date of the last convention in May of this year.

In addition to fidelity insurance, the Missouri Association made a contract on a similar plan with a prominent company writing burglary insurance on safes, and on the dates above mentioned there was outstanding through the office of the secretary \$2,250,000 of this class of insurance.

Following the plans adopted in Missouri, the State bankers' associations of several other States have undertaken to handle the fidelity business of their members. One State at least did not succeed with it and gave it up after a year's trial. Several other States have met with better success, but none as yet with a degree of success comparable to that attained in Missouri, but this is probably due to the failure to make it a special feature, or employ competent assistants to the secretary to push the work, or to the fact that some of the officials of the association in these States are themselves representing fidelity companies, rather than to any defect in the plan. In adopting this plan the Missouri Bankers' Association has officially approved of and recommended fidelity bonds to its members, and at the same time satisfactorily solved the problem of furnishing them to all of its members at a very reasonable and uniform rate.

On motion of Ralph W. Kirby, of Bainbridge, the thanks of the convention were extended to Mr. Austin for his interesting address.

THE PRESIDENT: I have received several requests to crowd the business along this morning so that ample opportunity may be given for the pleasures of the afternoon.

Several gentlemen have consented to speak on the various questions brought before us in the report of the council of administration, which was adopted yesterday. The first speaker is Mr. William L. Moyer, President of the National Shoe and Leather Bank, of New York city.

ADDRESS OF WILLIAM L. MOYER, PRESIDENT NATIONAL SHOE AND LEATHER BANK, NEW YORK.

Mr. President and Gentlemen—After the gentle reminder to which we have just listened, I certainly feel like taking as little time as possible. Furthermore, the address to which we have just listened has been so complete and covers the subject so thoroughly that it seems hardly possible for me to add anything to it.

We cannot but agree to the objections raised by Mr. Austin regarding personal bonds, and we cannot help commend the work done by the Missouri Bankers' Association along the line of getting lower rates for its members and at the same time affording adequate security against fraud.

The question of fidelity insurance is one of the most important that the banks of the country have to consider to-day, and yet it is one that has been given comparatively little thought and attention.

It would be impossible for me to enter into any detail about the great variety of companies engaged in this business, and I will simply refer to some statistics furnished me by Mr. Frank L. Hamilton, of Illinois, the chairman of the fidelity bond committee of the American Bankers' Association. He says: "In 1902 there were 17,250 employees of banks members of the American Bankers' Association bonded in fidelity companies. The total amount of these bonds was \$133,000,000. The premium paid was \$388,000."

From the same source I received the astounding information to me that the banks of the State of New York are paying on an average \$4.25 per thousand for their insurance, while in other States the rates range as low as \$2 per thousand, and these rates are made by the same companies, yet we have always assumed that the more hazardous risks are in the West.

Lack of uniformity in the bonds issued by different companies makes it difficult to collect in case of loss. Therefore, the committee of which Mr. Hamilton is chairman has rendered a great service to the banks of the country by preparing a bond which is practically incontestable. The committee claims that there is not a bond written by any company that the company is legally bound to pay, with the sole exception of the copyrighted form adopted by the American Bankers' Association, and that fifty to sixty per cent. of the claims against the different companies are contested.

It is expected that further action will be taken by the American Bankers' Association at its forthcoming convention in October looking to the establishment of a fidelity bond department, or the organization of a new company to provide bonds for the employees of members of the American Bankers' Association.

A great deal more might be said on this subject, but as my time has more than expired, and as I know Mr. Jones will have something interesting to say, I will give way to him.

THE PRESIDENT: I will call upon Mr. R. W. Jones, Jr., President of the Oriental Bank of New York.

ADDRESS OF R. W. JONES, JR., PRESIDENT OF THE ORIENTAL BANK, OF NEW YORK.

Mr. President and Members of the New York State Bankers' Association—I began my banking career in a small bank in a small town, and I had the good fortune to begin under a gentleman who was of the most distinct David Harum type. If there was one principle he tried to inculcate in me above any other it was that I should not talk. He kept saying to me, "Don't you have anything to say; let the other fellows do all the talking; but if you have got to talk, ask questions." So great has been my confidence in that advice and my belief in the principle of following precedents and the experience of others, that I have followed that rule literally to the very best of my ability.

The development of machinery for handling commerce and finance is exceedingly interesting, and while we do not so regard it, there is as much ingenuity displayed in the development of that machinery as there is in the development of manufacturing enterprise in machinery adapted to supplying the needs of modern civilization. One of the products of that invention is the corporate fidelity insurance company. There has been no invention in modern times that has proven more serviceable and adds more to the safety of banking business. The details of it have been so thoroughly gone into by gentlemen who have preceded me that I shall not undertake to discuss them. And right here I shall fall back into my old habit of asking questions. I do not know what has been done by this association in this respect. How is that, Mr. Pierson; has anything been done?

ACTING-SECRETARY PIERSON: Nothing.

MR. JONES (continuing): Then I feel very sure that this association can with great profit appoint a committee whose duty it shall be, first, to look into the forms of fidelity insurance bonds that are held by its members, and, secondly, the rates that they are paying for their insurance.

It was my good fortune to be a member of the Missouri Bankers' Association, and I know of the wonderful result accomplished there, and I should be very glad indeed if at this meeting a motion is made and carried to appoint a committee whose special duty it shall be, first, to see that the assured are protected. Not one banker, I dare say, reads the provisions of his policy, and while he has paid the premium there is clause after clause which almost renders the payment of the policy impossible should the company see fit to contest it.

The American Bankers' Association at Denver in 1898, appointed a special committee, which took up the matter and rendered a very great service. The result was the adoption of the American Bankers' Association form of bond, which is uniform, simple and plain.

The principle of insurance has met with a wonderful reception in every line almost where it has been adopted. The great financial corporations of this day are the insurance companies. There is nothing more welcome than the protection which they give and the feeling of security which they assure. I heard of a lady whose husband died recently and she was wiring the sad news to her brother the next morning: "John died last night. Loss fully covered by insurance." There is no question about the fact that that made its impression upon this lady even in the moment of her deepest bereavement.

One of the great advantages of the uniformity of insurance policies is in the fact that it increases the business of the insurance company itself. An insurance company, particularly in a new line of business, blazing its own way in a community, is likely to look at the matter from its own standpoint and not from the standpoint of the insured. The great advantages in the exchange of opinions is in the developing of a policy that which will be simple and at the same time which will work. The companies do not lose, as is shown undoubtedly by the experience of the State of Missouri, where the companies are gaining more business than in almost any other State in the Union; the rates are reduced, and a man is thereby rather inclined to take more insurance than he would otherwise have taken.

I should be very glad, gentlemen, if you would appoint a committee here to-day, if you want practical results, and if you do so I am very sure you will not regret it.

THE PRESIDENT: Is it the sense of the meeting that a committee shall be appointed on this subject, as has been suggested?

BRADFORD RHODES: I move that the Chair appoint a committee of three to take up this subject and report at the next annual meeting.

The motion was seconded and carried.

The acting secretary read a letter from William Sherer, Manager of the New York Clearing-House, expressing his regret at his inability to be present and address the convention.

THE PRESIDENT: Is there any new business to come before the convention?

LEO SCHLESINGER: I regret that the matter of interest on deposits has not been brought up so it might be discussed. I thought that was the most vital question that would come before this convention.

THE PRESIDENT: I would state that that matter was thoroughly considered by the council of administration in its report which was read yesterday wherein it said:

"This council recommends to the association the consideration of some action which will discourage the payment of interest on daily balance of individual depositors."

That will go out as the recommendation of this convention, the Chair holding that the reception and adoption of the report of the council of administration carried with it the adoption of the recommendations contained in the report.

MR. SCHLESINGER: With all due deference to the recommendation of the council, I still think we ought to have discussed the matter, so as to give the council the benefit of whatever might be said on the subject here; but being that you are desirous of getting through with the business of the hour, I will only say this, that the regret at Superintendent Kilburn not being here, reminds me that if we hold our conventions a week or ten days earlier, we may perhaps have the pleasure of seeing the Superintendent, as he will thereby be relieved from the attack of hay fever which

is prevalent about this season of the year. On the other hand, Superintendent Kilburn, who I am sure was in earnest when he stated that the payment of interest on deposits was suicidal, if he will only take up the great trust companies and help the bankers of this State regarding the interest question, either curtailing the advantages which the trust companies have over the banks, or in some other way curtailing the privileges which they have in the way of making money on their investments, or extend the charters of the banks of this State and give them an opportunity to do business which perhaps many of you gentlemen who desire to do a straightforward and humble banking business would not attempt to do what the trust companies are doing.

Last winter I went before the Legislature trying to pass a bill for the purpose of compelling the trust companies to keep up a proper reserve. The Legislature turned down the bill for the simple reason that the clearing-house of New York found that it was necessary for the safety of the community that the trust companies should have a proper reserve on hand. What was the result? The largest trust companies in New York withdrew from clearing-house privileges, and the weak kneed companies that couldn't afford to be independent remained. The most recent illustration is the Trust Company of the Republic with a million dollars capital undertaking to write a gigantic scheme amounting to forty-five millions, and by investigation it was shown that they would have made eighty-eight per cent. of their capital if they could have carried the scheme through. What was the result? Here was the stock bought by unfortunate investors who invested in their stock at 870. Last winter it dropped to 150. Now you can buy it for twenty-five.

This is just one result showing what the trust companies can do. I think that if this matter was again brought up and if this association would employ a proper man at Albany, as is done by almost every other branch of industry to look after all bills, and if any gentleman in this association desires to go to Albany to bring up matters for the benefit of the gentlemen at large, he should have some proper assistance there. I received none from New York, for a very good reason.

THE PRESIDENT: All great reforms come slowly. That is a serious question and it will, of course, have to be met, but we cannot accomplish the results we like in a moment. It will take time and there must be concerted action by all the banks. Now, it is the moral effect of discussing this subject during the past year that this resolution will go out as a recommendation from this association. It will go back to the council of administration to develop some plan that will probably be presented in the future that will wipe out that ruinous business. But if any gentleman to-day can offer this association a right plan for its remedy, I have no doubt that the association would be willing to consider and act upon it at once.

MR. SCHLESINGER: I agree with the Chair in the statement that all great reforms come slowly, but if you allow this to continue with the trust companies in a short time you will not know where you stand.

THE PRESIDENT: Have you a motion to make on the subject, Mr. Schlesinger?

MR. SCHLESINGER: No, sir; I only wanted to have the matter fully discussed.

THE PRESIDENT: There is no objection to the fullest discussion of the subject.

HIRAM R. SMITH: I think the point made by Mr. Schlesinger is well taken. If we are to adopt the recommendation made by the council of administration it does seem to me that there should be some discussion of the matter by the members present. Whether that discussion should be had now or at the time the recommendation comes up for adoption is, I suppose, for the Chair to decide.

The matter of the payment of interest on daily balances is one that is governed very largely by the people who are managing the banks. The gentleman who read the paper on daily balances based his calculation upon a four per cent. rate paid to depositors. It seems to me that is a wrong premise to go on. Any bank that pays

four per cent. on daily balances, it will be just as well for a convention to recommend to depositors not to place their money in that bank as to recommend that we pay no interest on daily balances. I do not think any one bank can afford to pay four per cent. on daily balances. The question as to what they can afford to pay depends very largely upon the business they do and upon the management of the bank, and it seems to me that that should be left largely to the individual banks or bankers according to the locality they are in and the manner of their doing business.

DAVID CROMWELL, of White Plains: This is an exceedingly important question, and I fully concur in the views that have been expressed, that it is wrong to pay large rates of interest on daily balances. I feel, however, that the reference of this matter to the council of administration is by far the best way to deal with it. It is a matter that requires a great deal of thought, and, in the hands of a committee, the various recommendations can be carefully considered and taken up. While I believe that discussion of the matter would be advantageous, still I do not see that we can do much more than express our opinion until after we shall have heard from a committee that has carefully considered the matter and is in shape to make some report.

EDWARD ELSWORTH: If this matter is going back to the council of administration, I trust that they will give it careful consideration, and then see to it that the interests of the association are represented in Albany in case legislation adverse to the banks is attempted. If we have a man at Albany with the New York State Bankers' Association behind him we will accomplish something; otherwise, we will not.

THE PRESIDENT: Is there any further discussion of the subject? If not, is there any new business?

MR. SCHLESINGER: I desire to bring up the resolution which I read yesterday and which was not in order at that time, viz.:

Resolved, That the thanks of this convention be tendered to Secretary Shaw, for the wisdom of his decision in depositing the revenue amounting to \$40,000,000 in the banks, and that said action be approved.

The resolution was seconded by several delegates, and was adopted.

THE PRESIDENT: Is there any other new business?

ACTING SECRETARY PIERSON: I would like to offer this resolution.

Resolved, That the committee which the president will appoint on bank money orders devise a plan whereby members of this association can be furnished uniform bank money orders, with proper advertising matter in connection with the same, at a minimum cost. The report of this committee shall be submitted to the council of administration, which is hereby empowered and requested to authorize such expenditure as shall in their judgment be proper to enable the committee to carry out its recommendations.

The resolution was duly adopted.

ACTING SECRETARY PIERSON: On the same subject, I desire to offer another resolution.

Resolved, That the delegates from this association to the American Bankers' Association Convention be instructed to use every endeavor at that convention to secure definite action favoring bank money orders.

This resolution was adopted.

The convention then proceeded to the election of the officers for the year 1904. Acting Secretary Pierson was directed to cast the ballot of the convention for the election of J. H. DeRidder for president of the association for the ensuing year.

THE PRESIDENT: I will appoint Mr. Rhodes and Mr. Young to escort President DeRidder to the chair.

Gentlemen, I present the president elect of this association and turn over to him the gavel.

PRESIDENT DERIDDER : Mr. President, Ladies and Gentlemen of the Convention—To be chosen to preside over the deliberations of the New York State Bankers' Association is a compliment and an honor. I fully appreciate the important position this association bears to the other State associations, having within its membership the capital and talent commanding the finances of this country, and, I might say, the world. The relations of the banks are so interwoven with all other commercial interests that they are a part and parcel of the commercial fabric of our country, so that the financial reports of our metropolis are closely watched as the barometer of the condition of trade. The relations of the United States Treasury and the banks are becoming more closely allied, and I apprehend the time will not be far distant when the financing of the Government will be done through the banks of the country. The great and most important political questions are to-day centered in the establishment of a currency which shall not only be absolutely sound, but shall have an elasticity which will meet the demands of our growing and important commercial interests.

I feel justly proud that ten years ago I had the honor, with a few gentlemen who met in Buffalo, to assist in organizing this association.

From that small beginning the association has grown, until now it embraces almost the entire banking capital of the State.

It is with a feeling of reservation and diffidence that I assume the responsibilities of this office, following in the wake of my illustrious predecessors, but I ask for your indulgence and support, and beg to thank you for this distinguished honor.

The election of vice-president is in order, gentlemen.

MR. ELSWORTH : I move that the president cast one ballot for the election of Mr. Pierson for vice-president.

The motion was seconded and carried.

PRESIDENT DERIDDER : I have the pleasure to announce that I have cast the ballot of the association for Mr. Lewis E. Pierson for vice-president of the association for the ensuing year, and declare him regularly elected to that office.

VICE-PRESIDENT PIERSON : Gentlemen, I thank you for the honor you have conferred upon me.

PRESIDENT DERIDDER : Next is the election of secretary.

MR. SMITH : I move that the acting secretary be directed to cast the ballot of the association for the election of Mr. E. O. Eldredge for secretary for the ensuing year.

The motion was seconded and carried ; Acting-Secretary Pierson cast one ballot and the Chair declared Mr. Eldredge duly elected secretary for the ensuing year.

E. O. ELDRIDGE : Mr. President and Gentlemen—I thank you for the honor conferred upon me, and I will endeavor to discharge the duties of the office to your satisfaction.

THE PRESIDENT : Next in order is the election of treasurer.

On motion, the acting-secretary cast one ballot for David Cromwell, of White Plains, and he was declared duly elected treasurer of the association for the ensuing year.

DAVID CROMWELL : Mr. President and Gentlemen—I desire to thank you very much for the compliment you have paid me. I have had the privilege of being associated with this association since its organization, and have ever taken a great deal of interest in its work. I feel that among the various treasurerships which it has been my privilege to fill in this life, there is none that has come to me with so much pleasure to myself as this.

THE PRESIDENT : It is usual at this time to nominate delegates to the convention of the American Bankers' Association, October 20-23 at San Francisco, Cal. The retiring president of this association is generally elected as delegate-at-large.

DAVID CROMWELL : I move that Hon. Stephen M. Griswold be elected delegate-at-large, with power of substitution. The motion was seconded and carried.

THE PRESIDENT : Each group is entitled to one delegate. The Chair is now ready to receive nominations.

E. C. McDUGAL : Group I has no chairman here, and the nomination I am going to make, therefore, is entirely an individual one. I name Mr. Clarence W. Hammond, of Buffalo.

The nomination of Mr. Hammond was seconded, and he was elected.

PRESIDENT DERIDDER : Group II is not represented. It might be well for the secretary of that group to send in to the secretary of the association the name of its delegate, so that his name may be included in the list.

E. O. ELDREDGE : Group II names Hon. A. B. Sawyer as its delegate, with power of substitution.

PRESIDENT DERIDDER : The delegates elected have power to name a substitute in the event that they cannot themselves go.

The nomination of Mr. Sawyer was seconded and he was elected.

A DELEGATE : On behalf of Group IV I nominate J. R. Van Wagenen, of Oxford.

The nomination of Mr. Van Wagenen was seconded and he was elected.

A DELEGATE : Group V nominates F. S. Sexton, of Gloversville.

The nomination of Mr. Sexton was seconded, and he was elected.

DAVID CROMWELL : Mr. Elsworth is chairman of Group VI, but as he is out of the hall at the moment I will name the gentleman who was agreed upon by the members yesterday as our delegate—Mr. Bradford Rhodes.

The nomination of Mr. Rhodes was seconded, and he was elected.

HIRAM R. SMITH : Group VII nominates Mr. Henry E. Hutchinson.

The nomination of Mr. Hutchinson was seconded and he was elected.

A. H. CURTIS : I may say that I am not authorized to speak for Group VIII, but I am going to the convention at San Francisco.

LEWIS E. PIERSON : Then I move that Mr. Curtis be elected as the delegate.

The nomination of Mr. Curtis was seconded, and he was elected.

PRESIDENT DERIDDER : I would name as the gentlemen to compose the committee on bank money orders the following :

Lewis E. Pierson, of New York ; F. E. Lyford, of Waverly ; Hiram R. Smith, of Rockville Centre.

On motion of A. H. Curtis, a vote of thanks was extended to the retiring officers of the association.

E. O. ELDREDGE : I desire to allude to the particularly gracious services rendered by Mr. Pierson in stepping into the breach which arose in connection with the office of secretary of this association, and to offer a special resolution of thanks to him, in which I am sure every member of the association will heartily join.

The motion was seconded and carried by a rising vote.

HIRAM R. SMITH : Mr. President, I rise to inquire if we are not to take any action on the recommendations made by the council of administration in their report, which was submitted yesterday ?

LEWIS E. PIERSON : With the permission of the Chair, I will state, in answer to the inquiry of the gentleman from Long Island, that Mr. Griswold, our retiring president, after going over the by-laws of the association, decided that the action of the convention in accepting and approving the report of the council of administration carried with it the approval of all the recommendations contained in the report.

PRESIDENT DERIDDER : Is there any other business to come before the convention ?

LEWIS E. PIERSON: I would move a vote of thanks to each of the polo teams who favored us with the entertainment yesterday afternoon, and that the incoming secretary be instructed to express our thanks to them in suitable communications. (The motion was seconded and carried.) I would also move that the thanks of the convention be extended to the speakers who have favored us with addresses at this convention, and that the incoming secretary be instructed to convey the same in a suitable communication to those gentlemen.

The motion was seconded and carried.

PRESIDENT DERIDDER: I believe this concludes the business before the convention, and I therefore declare the convention adjourned *sine die*.

LIST OF DELEGATES REGISTERED AT THE CONVENTION.

- Adams—G. W. Hannaha, Cas. Farmers' National Bank.
- Albany—E. A. Groesbeck, Director National Commercial Bank; J. J. Gallogly, National Exchange Bank; C. Tremper, Cas. First National Bank; W. W. Batchelder, Auditor National Commercial Bank; Edw. J. Hussey, Cas. National Commercial Bank; Willis G. Nash, Cas. New York State National Bank; Chas. H. Sabin, Vice-Pres. National Commercial Bank.
- Bainbridge—Ralph W. Kirby, Cas. First National Bank.
- Baldwinsville—W. F. Morris, Pres. First National Bank.
- Ballston Spa—Thos. Kerley, Cas. Ballston Spa National Bank; John Burke, Director Ballston Spa National Bank; Saml. E. Taverner, Accountant Ballston Spa National Bank; H. J. Donaldson, Vice-Pres. First Nat. Bank; Andrew S. Booth, Pres. Ballston Spa National Bank.
- Batavia—D. W. Tomlinson, Pres. Bank of Batavia; J. L. Bigelow, Cas. First National Bank.
- Brewsters—Frank Wells, Pres. First National Bank.
- Brockport—Geo. C. Gordon, Asst. Cas. First National Bank.
- Brooklyn—E. A. Walker, Pres. Seventeenth Ward Bank; Stephen M. Randall, Director Seventeenth Ward Bank; G. H. Sanborn, Asst. Cas. Brooklyn Bank; Nelson B. Burr, Director Brooklyn Bank; Henry E. Hutchinson, Pres. Brooklyn Bank; Stephen M. Griswold, Pres. Union Bank.
- Buffalo—L. H. Gethoefer, Cas. Columbia National Bank; A. D. Bissell, Pres. People's Bank; Elliott C. McDougal, Pres. Bank of Buffalo.
- Canajoharie—Stafford Mosher, Cas. Canajoharie National Bank.
- Cooperstown—Theo. C. Turner, Cas. First National Bank; G. M. Jarvis, Cas. Second National Bank.
- Corinth—Theo. Elixman, Pres. Corinth National Bank.
- Ft. Edward—A. R. Wing, Cas. First National Bank.
- Franklin—E. C. Stewart Vice-Pres. and Cas. First National Bank.
- Freeport—W. C. Miller, Director Bank of Freeport.
- Fulton—H. E. Hannis, Assistant Cashier Citizens' National Bank.
- Fultonville—O. F. Conable, Cas. Fultonville National Bank.
- Geneva—S. H. Verplanck, Pres. Geneva National Bank.
- Glens Falls—F. F. Pruyn, Cas. Merchants' National Bank; Edw. Reid, Director Merchants' National Bank; E. T. Johnson, Cas. First National Bank; W. E. Russell, Teller First National Bank.
- Gloversville—Frank S. Sexton, Cas. Gloversville National Bank.
- Granville—D. D. Woodard, Pres. Granville National Bank.
- Herkimer—A. W. Haslehurst, Pres. First National Bank; W. I. Taber, Cas. Herkimer National Bank.
- Hoosick Falls—A. J. Colgan, Teller First National Bank; Delmer Runkle, Cas. People's National Bank.
- Hudson—F. C. Haviland, Cas. Farmers' National Bank.
- Huntington—Thos. Young, Pres., H. T. Sammis, Vice-Pres., Jos. Irwin, Director, Bank of Huntington.
- Jamaica—H. L. Crandell, Vice-Pres. Bank of Long Island.
- LeRoy—Wm. F. Huyck, Pres. Bank of LeRoy.
- Little Falls—Fred. I. Small, Director Little Falls National Bank; L. O. Bucklin, Cas.; D. H. Burrell, Pres. National Herkimer Co. Bank.
- Lowville—F. McKullock, Pres. First National Bank.
- Malone—M. T. McGarrahan, Cas. People's National Bank.
- Mexico—Chas. A. Peck, Cas. First Nat. Bank.
- Mt. Kisco—F. M. Carpenter, Vice-Pres. Mt. Kisco National Bank.

- New York—Alfred J. McGrath, Asst. Cas. National Shoe and Leather Bank; A. H. Curtis, Cas. National Bank of North America; Bradford Rhodes, Pres. Thirty-Fourth Street National Bank; C. F. Hose, Mgr. J. B. Russell Co.; H. F. Fonda, Asst. Cas. National Bank of Commerce; Geo. W. Pancoast, Cas. Astor National Bank; R. A. Purdy, Mgr. Mechanics and Trader's Bank; C. B. Outcault, Cas. Federal Bank; L. R. Rothschild, 2nd Vice-Pres. Federal Bank; Chas. E. Gardner, N. W. Harris & Co.; Edw. S. Avery, Trust Officer Nineteenth Ward Bank; L. B. Pierson, Vice-Pres. New York National Exchange Bank; G. E. Lewis, Cas. Gallatin National Bank; Jas. M. Donald, Vice-Pres. Hanover National Bank; Leo Schlesinger, Pres. Mechanics and Traders' Bank; Alex. D. Cambell, 2nd Asst. Cas. Hanover National Bank; N. A. Reynolds, Asst. Cas. National Citizens' Bank; Russell Armstrong, Harvey Fisk & Sons; Gilbert G. Thorne, Vice-Pres. National Park Bank; Chas. E. Berry, Director Oriental Bank; R. W. Jones, Jr., Pres. Oriental Bank; W. L. Moyer, Pres. National Shoe and Leather Bank; Jas. D. Livingston, Cas. Bank of Discount; Jos. G. Robin, Pres. Bank of Discount; Chas. W. Kleck, Cas. Liberty National Bank; W. O. Jones, Asst. Cas. National Park Bank.
- Niagara—P. F. Pfohl, Cas. Power City Bank.
- N. Tonawanda—James H. Rand, Pres. Benj. L. Rand & Co.'s Bank.
- Northville—B. Eglin, Cas. Northville Bank.
- Norwich—Henry Hewitt, Teller National Bank of Norwich.
- Oswego—F. E. Sweetland, Cas. Second National Bank.
- Owego—E. O. Eldredge, Cas. Owego National Bank.
- Oxford—J. C. Estelow, Cas. First National Bank.
- Patchogue—F. A. Overton, Cas. Patchogue Bank.
- Peekskill—J. Towart, Jr., Teller Westchester Co. National Bank.
- Penn Yan—N. S. Baldwin, Pres. Baldwin's Bank.
- Plattsburg—E. G. Moore, Pres. First National Bank.
- Poland—S. R. Brayton, Asst. Cas. National Bank of Poland.
- Port Chester—J. W. Ingman, Asst. Cas. First National Bank.
- Port Jefferson—F. A. Kline, Cas. First National Bank; E. M. Davis, Cas. Bank of Pt. Jefferson.
- Poughkeepsie—F. M. Johnson, Pres. Fallkill National Bank; E. Elsworth, Pres. Poughkeepsie Savings Bank.
- Pulaski—Louis J. Clark, Cas. Pulaski National Bank.
- Red Hook—J. W. Elseffer, Vice-Pres. First National Bank.
- Rockville Center—H. R. Smith, Pres. Bank of Rockville Center.
- Rome—G. G. Clarabut, Cas. Farmers' National Bank.
- Roadout—P. A. Canfield, Pres. National Bank of Roadout.
- Sandy Hill—Chas. T. Beach, Cas. Sandy Hill National Bank.
- Saratoga—J. H. DeRidder, Cas. Citizens' National Bank; Wm. B. Gage, Pres., Willard Lester, Vice-Pres., Wm. Hay Bockes, Cas. First National Bank.
- Schoenectady—H. L. Milline, Cas. Mohawk National Bank; J. Van Vranken.
- Springville—F. O. Smith, Cas. Farmers Bank.
- Stamford—J. N. Merchant, Pres. National Bank of Stamford.
- Syracuse—E. S. Tefft, Cas. First National Bank; C. A. Bridgman, Cas. Merchants' National Bank.
- Troy—Norman B. Squires, J. H. Neber, Pres. United National Bank; Geo. P. Ide, Pres. Manufacturers' National Bank; F. N. Mann, Vice-Pres., Wm. Kemp, Pres., Mutual National Bank; F. H. Rowe, Jr., Director Central National Bank; Wm. C. Feathers, Accountant Manufacturers' Nat. Bank; A. B. Cobden, Cas. People's Bank; F. E. Howe, Cas., Frank Gilbert, Director, Manufacturers' National Bank; Henry Colvin, Cas. National State Bank.
- Utica—D. A. Avery, Cas. Second National Bank.
- Waterloo—Jas. H. Haslett, Vice-Pres. First National Bank.
- Watertown—Geo. B. Massey, Vice-Pres. Jefferson Co. National Bank.
- Watervliet—Thos. Knickerbacker, Pres., A. T. Phelps, Cas., National Bank of West Troy.
- Waverly—F. E. Lyford, Pres. First National Bank; J. T. Sawyer, Pres. Citizens' Bank.
- White Plains—David Cromwell, Pres. First National Bank.
- Worcester—Geo. B. Crippen, Cas. Bank of Worcester.
- Yonkers—Peter J. Elting, Pres. Westchester Trust Co.

GUESTS.

- Adams—Mrs. G. W. Hannahs.
- Albany—Mrs. W. J. Nash, Mrs. J. J. Gallogly.
- Baldwinsville—Miss Morris.
- Ballston Spa—Mrs. Kerley, Mrs. Burke, Miss Agnes Christopher.
- Batavia—Mrs. J. L. Bigelow.
- Brooklyn—Miss Randall, Miss Ella S. Hutchinson, Mrs. Griswold.
- Buffalo—Mrs. A. D. Bissell.
- Brewsters—Mrs. F. Wells.
- Cooperstown—Mrs. G. M. Jarvis, D. H. Gregory, Mrs. D. H. Gregory, Miss Randall, Mrs. Turner.
- Chicago—Chas. O. Austin, National Bank of North America; Mrs. C. O. Austin.

- Ft. Edward—Mrs. A. R. Wing, Miss Nellie Wing, Mrs. A. Emerson, Miss E. Emerson.
- Freeport—Mrs. William G. Miller.
- Herkimer—Mrs. Brayton, Miss Brayton, Mrs. Haslehurst, Miss F. Haslehurst.
- Hoosick Falls—Mrs. Runkle.
- Hudson—Mrs. F. C. Haviland.
- Huntington—Henry Bush, Miss Irwin, Miss G. Irwin, Mrs. Young, Mrs. Sammis, Mrs. Irwin.
- Jamaica—Mrs. Crandell, Mrs. S. R. Smith, Mrs. A. P. Crandell.
- Jacksonville, Fla.—Mrs. Arthur F. Perry.
- Jersey City—N. J. Edge.
- Little Rock, Ark.—B. J. Brown.
- Mexico—C. A. Peck, Grace L. Babcock.
- Minneapolis, Minn.—J. Chapman, Jr.
- Mt. Kisco—Mrs. F. M. Carpenter.
- New York—E. S. Doolittle, Federal Bank; Chas. A. Morrison, stenographer; C. H. Senauer, "American Banker"; Edwin Goodall, Bankers' Money Order Association; Jas. R. Branch, Secretary American Bankers' Association; F. H. Hooke, Pres. "Financial Age"; A. H. Auge, "The Financier"; Editor "American Banker"; Mrs. W. O. Jones, Mrs. A. H. Curtis, John W. Wooten, Mrs. F. E. Lewis, Mrs. H. A. Peck, Mrs. J. M. Donald, Mrs. C. A. Morrison, Miss H. A. Senauer, Miss C. E. Senauer, Walter B. Manny, Mrs. Guggenheim, Mrs. Sulzberger.
- Niagara—Mrs. Pfohl.
- Northville—Mrs. Eglin.
- Patchogue—Mrs. Overton.
- Pen Yan—Mrs. Baldwin.
- Philadelphia—H. Baker, Merchants' National Bank.

- Waverly—Mrs. F. E. Lyford.
- Waterloo—Mrs. J. Haslet.
- White Plains—Mrs. D. Cromwell.
- Worcester—Mrs. G. B. Crippen.

Savings Departments in National Banks.

Editor Bankers' Magazine:

SIR: I have read with considerable satisfaction the article in your August number by W. H. Bryan with relation to banks and trust companies. We are specially interested in the question, as we are now operating a savings department in connection with our bank, and have adopted the usual rules of Savings banks requiring notice in case of withdrawal of deposits.

We have been in doubt whether, under the provisions of the National Banking Act, these rules could be enforced against depositors in that department. Mr. Bryan does not discuss this feature of the subject, and, while the Comptroller has approved savings departments in National banks, the question of the enforcement of regulations with reference to withdrawals is a very important one, and of general interest to the National banks at this time.

An article on that subject would certainly be very acceptable to your readers.

Very truly yours,

JAMES EVANS, President National Bank of McKeesport.

McKEESPORT, PA., September 16.

Gold Basis for Mexico.—The report of Mexico's Monetary Commission, sent abroad, is now published in Spanish. Among the more interesting points are the following:

"In Russia and in England, especially, the immediate establishment of a gold standard in China is regarded almost as impracticable. In the monetary system that is recommended for the purpose of bringing about a fixity of international exchange the price in gold of bar silver and the value in gold of silver money are absolutely disassociated. The former, the report says, may fluctuate in the market, whereas silver money will always have a fixed value in gold—hence the stability of international exchange. This fixed value in gold, the report continues, will be maintained by the Governments by certain regulations, one of which will be the closing of the mints to the free coinage of silver."

STATE BANKERS' ASSOCIATIONS.

REPORTS OF RECENT CONVENTIONS.

INDIANA BANKERS' ASSOCIATION.

The seventh annual convention of the Indiana Bankers' Association met at South Bend September 9 and 10. President R. L. O'Hair, President of the Central National Bank, Greencastle, called the convention to order in the banquet-room of the Oliver Hotel, at 10 o'clock A. M., September 9. Prayer was offered by Rev. E. P. Bennett, and an address of welcome was delivered by Mayor Edward J. Fogarty, of South Bend, who said :

WELCOME BY MAYOR FOGARTY.

Through the courtesy of your committee I am permitted to express the hearty welcome and good fellowship of the people of South Bend, and in performing this very pleasant duty I welcome you not in a formal, perfunctory manner but heartily, with all the warmth of hospitality which characterizes our people. We are glad to greet visitors in the city. We welcome strangers within our gates because we are proud of our city and in knowing that no visitor has been disappointed in his expectations when visiting South Bend.

We are proud of our fame as a manufacturing center, proud of our mammoth industries, whose wares are known in all the markets of the world. We are proud of our schools, both public and private, proud of the great University of Notre Dame and its auxiliary academy, St. Mary's. We are proud of the city, of its buildings, its many evidences of thrift and progress, of our civic improvements, with miles of beautiful paved streets lined with commodious and attractive homes, and we are especially proud of our citizenship, of the energetic, rugged manhood which has aided in the development of the city from Alexis Coquillard down to the last and most humble recruit to our population. Destroy the city and it would rise again, for its wealth is not in gold or things material, but in the intelligent, progressive, law-abiding spirit of our people.

We greet you here as busy men who have behind you substantial interests, and who come together to advance the usefulness of institutions closely connected with the commercial development of the country. We know that your time will be well occupied, yet we extend to you the freedom of the city. We hope that you will have time to become acquainted with South Bend, to learn to know its people, to observe the substantial progress upon which we rely, and as mayor of this city and on behalf of its people I present to you for your inspection during your sojourn an ideal place of abode undisturbed by social disorders, where labor and capital understand each other, and employer and employee stand arm in arm ; a clean city of healthful laboring people, a nucleus of a great municipality, who believe in living as we move along.

At the conclusion of Mayor Fogarty's speech President O'Hair delivered his annual address, which was as follows :

ANNUAL ADDRESS OF PRESIDENT R. L. O'HAIR.

In times of exceptional prosperity, when speculation usually accompanies rising prices, the inevitable working of monetary laws is quite likely to be disregarded, but in due course of time these laws will nevertheless bring logical consequences with fatal precision.

The facts and reasons advanced for the promotions, combinations and capitalization of new industrial companies in recent years are familiar to all of us. Although their operations were at the time dazzling and fascinating, they were in truth only the peculiar forms in which the speculative mania—(an old malady)—has asserted itself in present conditions. The special character of the new industrial organizations, and the legal questions involved in their operations, were new ; but the executive expansion, the stretching of valuations

the rise of securities under the aid of syndicates to a price which led the investing public to refuse to buy, these were all familiar phenomena.

The period of inflation, however, is inevitably and always followed by a period of deflation. This is as certain as fate, and we are now in a time of unmistakable reaction from excessive speculation in securities.

In former experiences its general characteristics have been observed time and again and they are clearly observable to-day. It is the relation of the banks to this situation and its lesson in regard to our currency which is of very grave practical importance, and it is my purpose briefly to discuss the relations now existing between the banks and the money market.

As every banker knows, a loan granted by a bank is not necessarily a loan of money; in most financial centres actual money is not passed. The loan is a case of buying and selling; the bank buys the right to receive a definite sum in the future, say thirty, sixty or ninety days, and it gives the borrower the right to draw a definite sum on demand. Ordinarily, where checks and drafts are in use, the borrower will seldom exercise his right to draw by asking for actual cash from the reserves. In the main, what he wishes is a means of payment acceptable to those to whom he is indebted. In other words, the chief function of a bank in the business community is the coining of salable property into means of payment by means of discounting paper based on transactions in goods or property. The discount operation places the bank in a certain legal control over the values lying beneath the transactions. The means of payment arising out of the process appears in the shape of a deposit account to the credit of the borrower, and the total sum of such means of payment thus created is roughly given, in the total of the bank's deposits, to the country.

NEW PROBLEMS FOR BANKERS.

The new industrial combinations, with their expanded capitalization—some of it admittedly carried only on "good will"—have raised new problems for the banker in judging of collateral. Recent developments, moreover, make it clear that these problems have not been wisely pondered by influential elements in certain quarters. Banks have been forced out of their legitimate functions to assist operations in Wall Street. The disposal of securities in the stock market has often been assumed to be of greater importance than the safety of the deposit item. As every interested person knows, enormous blocks of unsalable securities have been held by financial institutions as collateral for loans to syndicates and promoters. The extent to which this practice has been carried on can be realized only by the severity of the recent enforced liquidation, and in the end only by the purging effects of a commercial crisis.

POSSIBLE DANGERS TO THE BANKS.

The element of danger to the banks arising from the peculiar character of many new securities offered for collateral, is to be found in the conditions affecting their market price. Any obligation is regulated as to its price by the rate of dividend, the certainty of that income and by its term. In past years railway and other bonds and stocks of well-known companies, whose affairs were known and whose conditions were stable, afforded a class of collateral easy to deal with; but there are now new classes of securities having certain characteristic qualities which must modify our general judgment; consequently the selling price of a stock may vary because of very slight actual changes, or even because of expected changes in the rate of dividend. A fall of only one per cent. in the dividend will cause a decline of perhaps thirty points in the market price of a stock. Now the peculiarity of the new industrial securities is that they differ from those of many settled enterprises by the fact of their dependence on the endless changes of business prosperity or depression. These changes are certain to make large fluctuations in the net profits of an industry or to destroy them entirely.

But it is to be remembered that the value of enormous capitalizations will be directly modified by slight changes in the actual dividends. That is, an enormous shrinkage of millions of dollars in the face value of collateral may result from inevitable changes in the net profits of special industries. If a given industry has a seven per cent. preferred stock outstanding to the amount of \$500,000,000 at par, a change in the prospects of the industry, without an actual reduction of dividends, would lower the face value of the stock by \$150,000,000, and an actual reduction of dividend to six per cent. would cause another enormous fall in nominal market prices. This is a case where very slight changes might produce enormous results in the collateral offered to banks.

In brief, enormous fluctuations in the new collateral are now possible because they are directly affected by the ups and downs of trade and commerce. This is, in my judgment, the peculiar and really serious element in the existing situation which must be faced by the banks. Taking the institutions of the country as a whole, they must expect to have a shrinkage of hundreds of millions of dollars in the face value of these new securities. Just

to the extent that our banks, trust companies and individuals have loaded themselves with these new securities will the money market have been seriously affected. Just to the extent that such collateral for loans has been taken by our financial institutions, at the high speculative value of the promoters, a corresponding demand item has been created against the banks in the deposit account; and the tenderness of the money market in recent months has been due to the fact that the banks may be called on for cash to the full amount of this demand item. Then, even if the collateral behind the loan item shrinks enormously, the banks are still bound by the obligation to pay the demand deposit resulting from the original loans.

Here is the rub. So far as the deposit item has been enlarged by loans based on this dangerous class of securities and the resources of the banks looked up, the demands of legitimate borrowers could not be met. When a desirable business enterprise has need of new capital, when the moving of our new crops and live stock from our farms demand assistance from the banks, the money market has been found to be in a sensitive condition.

Merchants cannot expand their business and new investments are postponed to the general disadvantage of wage earners and production. But if the money market had not been choked with doubtful collateral, the accommodation to desirable borrowers would have been easy and cheap.

Therefore the explanation of the present condition of the money market, its inability to respond freely to new demands, its evident difficulty in maintaining its normal condition, is to be found not so much in a scarcity of money, as in the presence of a vast mass of doubtful and speculative collateral held as the basis of loans. This is my diagnosis of the disease; in fact, already for more than six months nature has been purging the patient and if it continues gradually we may thereby escape a severe crisis. There would have been little talk about the scarcity of money if some financial institution had not been loaded with promotion securities.

The real remedy for the tightness of the money market is not to be found in an issue of more circulation, but by the avoidance of the speculative securities of Wall Street.

Under our present system of banking the method of issuing notes, while unquestionably safe, affords little or no elasticity to banks requiring a note issue. But in the great financial centers, where checks and deposits form almost the entire means of payment, the only question is whether sufficient sums of legal money can be obtained to keep reserves at a safe point. No matter how much the circulation is, no matter how much the absolute quantity of reserve in the banks of the country, a reckless acceptance of speculative securities could so inflate the deposits, or demand liabilities, that even a very large sum of resources would be a small percentage of the liabilities and money would be as tight as ever.

To urge an enlargement of the bank circulation, however, as a means of enabling enormous flotations of industrial securities to be carried by present holders is as useless as it is imprudent.

There is, however, a widespread and mistaken idea that prices of goods and even of securities would be raised by an issue of more money. Doubtless this belief lies behind some of the thoughtless cry for an increased elasticity of the currency. But it is plain to most business men that prices of the products of our country cannot be modified through changes in our money, only by a change in the value of the standard money of the country. We have a gold standard and gold prices; to change our level of prices by manipulating our money we must do something to change the value of gold. So long as National bank notes are redeemable in legal money as good as gold, an addition to their quantity will not change the value of gold or the gold prices of the country.

The fact is, the National bank notes, greenbacks, checks, drafts and even silver dollars are in this country not the standard by which prices are fixed, but only the medium of exchange. These mediums of exchange are kept equal to gold by some system of redemption direct, or indirect, and do not directly affect prices in gold; this fluctuation in amount ought to correspond to the demands of the business public for a medium of exchange, rising automatically with the increase of transactions and falling when the need has passed. But it should always be kept distinctly in mind and always emphasized that there is a great difference between the standard in which prices are expressed and the medium of exchange by which goods are most conveniently transferred. Goods are coined into means of payment by banks when a loan is made on the basis of goods followed by a deposit account to the amount of the loan and leading to the use of checks, so that no cash enters into the process beyond the store of money kept in the reserve. Thus is provided a highly efficient medium of exchange which is absolutely elastic, expanding exactly according to the business operations and diminishing as men contract their enterprises and cease to ask for loans.

A proper examination of this function of banks in a business community, a knowledge of the medium of exchange thus created by the banks, one which has been long used, tested by experience, familiar to everyone, based solely on the assets of the banks, will show that the problem of a scarcity of money depends on other things than those sometimes referred

to by currency reformers. In short payments between individuals and banks, between banks themselves, are almost entirely performed by this elastic medium of exchange and in amounts fairly well represented by the enormous figures of the clearings of the country. It is this familiar, long-used and elastic medium of exchange which depends for its solvency wholly on the character of the collateral accepted by the banks. This is why it has seemed to me to-day so important to discuss the central questions involving the nature of existing industrial securities and the consequences arising therefrom which affect the relations of the banks to the money market.

In meeting the difficulties due to the inelasticity of National bank circulation, wisdom and expert knowledge should be regarded. There may be differences of opinion as to the basis provided for the circulation.

Certain it is that both in reason and experience a circulation secured solely by bonds, no matter how good, can never be and never has been elastic. Nor should the cry of "wild-cat" currency be applied ignorantly to notes secured by the so-called "assets." For it will be remembered that many of the present cases of worthless notes to which such epithets were applied were bond-secured notes. After all is said, however, it will be found that whatever the system of note issues, the essential soundness of the demand liabilities—whether in the form of notes or deposits—depends upon the kind of collateral or assets held for loans. That is, it depends on the management of the bank more than upon any particular system.

Andrew Smith, Assistant Cashier of the American National Bank, Indianapolis, read his annual report as secretary of the association. It showed a membership of 415, compared with 364 at the date of the previous convention.

W. H. Hart, ex-Auditor of State, delivered an address relating to State supervision. In regard to savings banks in Indiana, he said :

"The banking laws of Indiana are especially commendable as to Savings institutions. The five Savings banks are located at La Fayette, Evansville, La Porte, Terre Haute and South Bend. The State not only exercises a close supervision but controls salaries, the theory being that the depositors shall share in all the profits and that the management, while being of the best financial type, shall keep in view the semi-philanthropic character of any institution that cares for the small savings of those who from their daily earnings are seeking to build for the future. There is an army of 25,000 depositors in these five banks, with deposits of over \$6,000,000 and last year nearly a quarter of a million dollars was paid in dividends, the expenses of management being less than \$60,000."

The next speaker was S. R. Flynn, President of the National Live Stock Bank, Chicago, who delivered the following address :

ADDRESS OF S. R. FLYNN.

Mr. President, Ladies and Gentlemen—We are at the end of a chapter in the history of our progress. It is well that we pause for serious reflection. Certainly, conditions do not inspire optimistic enthusiasm, neither do they warrant pessimistic gloom and gloat.

Since 1897 this country has indulged in an orgy of speculation so insanely wild that it hardly has a parallel in history. Beginning with last September outraged confidence began squeezing the water out of stock-market quotations, and it has been squeezing ever since, and it is not through squeezing. Do not be deceived by temporary rallies. Stock market quotations must reach the level of actual values before confidence will think it safe to enter Wall Street again. Many stocks now quoted will no longer be listed when confidence again walks abroad in Wall Street. Liquidation, drastic liquidation, will not suffice. There must be reorganization. Value given to nothing cannot be maintained. Yet this is what our twentieth century financiers have attempted. They have capitalized expense accounts. They have capitalized bonuses paid for individual plants, for individual enterprises. They have capitalized the promoter's rake-off.

The officials of the Government, through misconception of the situation, on several occasions came to the relief of speculation. It was an unwise use of Government power and can be excused only upon the ground that the officials honestly thought disaster in Wall Street meant general disaster.

However, most fortunately, the inevitable was not too long delayed, and therefore legitimate business has not been materially affected.

Last year we were looking into the future with fear and trembling. To-day we feel the worst is over. The anticipated stock market panic has occurred. Yet general business, legitimate business, is in a healthy, sound and prosperous condition.

There is nothing in the present financial situation that we would change if we could. Credit is easy, business is brisk and speculation is on its back. What more could be desired ?

If this situation is the result of unscientific monetary laws, how much cause have we to thank fortune that our laws are unscientific. There is no demand for radical change coming from any considerable portion of the practical business men of the country. But there has been urgent, insistent demand for revolutionary change coming from certain theorists. Since 1898 and even before that they have urged that all things financial be turned upside down. Fortunately they have not had their way. The conservatives have opposed revolutionary change, and have gently but firmly adjusted the mental balance of the radicals. Now the radicals have become harmless, quite. They disclaim revolutionary purpose. They have ceased to advocate branch banking, though branch banking is a necessary condition precedent to the successful use of asset currency. Perhaps they have come to realize, as we do, that while branch banking is an ideal system for a developed country, it is not the system for a developing country. They have abandoned advocacy of true asset currency. After these years of heated discussion the radicals offer as fully supplying all needed change in our banking and currency laws the Fowler bill, which may be rightly titled "A bill providing for the inflation of our currency by the creation of a limited volume of safe inelastic National bank notes based upon the assets of such banks."

You are all familiar with the last edition of the Fowler bill, and therefore know I have given its proper title. The professed object of the framer of this bill is to provide a currency combining perfect safety with perfect elasticity. This is seeking the unattainable.

The advocates of this legislative offering fiercely defend the safety of the proposed currency. I cannot for the life of me see why they waste so much eloquence on this point. No one seriously disputes the safety of these notes except, perhaps, Mr. Fowler himself. In a speech recently delivered before the Minnesota bankers, Mr. Fowler made this startling statement: "No bank is bound to redeem its liabilities in gold; it can use greenbacks, which are absolutely worthless, or silver dollars worth about thirty-five cents." Section 9 of the last Fowler bill provides that his notes shall be redeemed in "lawful money," and "lawful money" includes greenbacks, which he says are absolutely worthless, and silver dollars which he says are worth about thirty-five cents. If Mr. Fowler were seriously taken, this gratuitous assault upon the credit of the Government might unsettle our entire monetary system, based as it is upon our confidence in the willingness and ability of our Government to redeem every form of token money with gold coin, which has accepted value the world over. However, doubtless Mr. Fowler was not serious when he made this attack on our national credit, but if he were, no one took him seriously, and so no harm was done. The credit of the Government remains as high above suspicion as ever.

For myself, I am quite convinced that the Fowler note would be safe notwithstanding this back-handed slap at it. Indeed, it is so perfectly safe that it is perfectly inelastic. There is but one way to supply elasticity to a credit note. It must be made in some degree undesirable. The more undesirable the note may be, the more elastic it will be; always provided the degree of undesirability is not so great that the note cannot be forced into circulation. A credit note must be safe and it must circulate at par. Neither the banks nor the public would tolerate the slightest measure of uncertainty, nor the smallest collection charge. This Fowler note is absolutely safe, and it would circulate at par. Wherein is it made sufficiently undesirable to be in any degree elastic?

The committee reporting the last Fowler bill state: "It is probable that the whole of the proposed issue would find occupation during the coming fall, and as certainly be practically all retired during the succeeding spring."

I think it probable that a large part of the proposed issue might find occupation next fall, but I am not so sure that practically all put into circulation would be retired during the succeeding spring. This claim is comforting, however, in that it indicates that asset currency advocates have at last learned the true meaning of the word "elasticity." Not long ago an inflationist told me that he thought elasticity meant capacity for expansion. Now I think they begin to realize that elasticity is the tendency to return to an original condition. Contraction is not only an essential to elasticity, but it is the chief essential. It might be well to have a currency that would expand when needed, but it is more essential that it should contract when not needed.

Mr. Fowler's notes would doubtless go out in the fall, but how is he to get them back in the spring as he promises, and keep them in retirement until the legitimate demands of another fall call them again into active service?

He tells us that he provides all essential degrees of undesirability to his notes by depriving them of the reserve function, thus insuring this promised fall opening and spring closing on schedule time. This statement looks very well on paper in the dark, but it will not stand the light of practical experience.

The Fowler bill offers us a perfectly safe note. It is rendered undesirable by depriving it of the reserve function. The present National bank note is a perfectly safe note. It is rendered undesirable by depriving it of the reserve function.

Mr. Fowler says the average life of the present National bank note is 753 days. Can Mr. Fowler say why his perfectly safe note, deprived of the reserve function, would not remain out 753 days? Why does the present National bank note stay out 753 days? Because it is as absolutely safe as any other form of money in circulation. Because there is no good business reason why a bank should force redemption of the bills of other banks coming into its possession.

How is the present National bank currency handled when it finds its way into a bank? If it is mutilated, it is sorted as required by the department, and placed with the rags accumulating for redemption. If it is fit for circulation it is not segregated from other currency. At close of business you divide your total currency by five, six or seven according to the elasticity of your conscience. The result is your aggregate of National bank notes. You then subtract the amount of National bank notes thus discovered to be on hand from the total currency, and the remainder is your legal tender, and is a large part of your cash reserve. I have examined hundreds of National banks, and I have yet to examine one that did not "estimate" the amount of National bank notes on hand. Can anyone guess why they would not treat the perfectly safe Fowler note in the same way?

I am quite willing to concede that the New York banks do not and would not "estimate" the amount of National bank notes on hand. They live on a higher moral plane down there in New York than we do out here in the West. At least that's what Director of the Mint Roberts and other advocates of inflation claim. Mr. Roberts says the New York banks would send all such bank notes in for redemption as soon as received in order to obtain reserve money. What an unnecessary waste of time! And, by the way, if the New York banks now segregate National bank notes and promptly forward them for redemption to obtain reserve money in their stead, how is it possible that such notes remain in circulation until worn out, as Mr. Fowler claims? I have thought a very large proportion of the National bank note issue found its way into the New York banks before it was worn out.

Director Roberts and the rest may be assured that the New York banks would handle this proposed new bank currency in the way that would bring them most profit, and so would we all of us. However, I might suggest to the advocates of inflation that the assurance that New York bankers would promptly redeem this new currency to secure reserve money conveys no sense of comfort to the Western banker who would have to supply that reserve money. But such a contingency would hardly arise.

NOT ELASTICITY BUT "MORE MONEY."

There is no question of elasticity involved in this discussion. It is an offer of more money. It is an offer of a present addition of about \$185,000,000 to the volume of our inflexible currency. It is offered to us on easy terms. We are told that our refusal to accept this offer to inflate the currency is prompted by selfishness. I cannot speak for others, but for myself, I know I could add not less than \$15,000 per annum to the income of the bank with which I am connected, if this bill were to become a law. Yet I oppose it. I oppose it because I think it wrong in principle—it is a special privilege. I oppose it because it contemplates an outrage upon bank depositors. I know the advocates of this measure assert that the depositors would be in identically the same position as they are to-day, if first-lien-asset-currency were an accomplished fact. I am surprised that gentlemen who are students having a place in public esteem should attempt such transparent deception to quiet the fears of the depositors. I oppose this bill because I consider it a dangerous precedent. Within two years, finding that the promised spring closing did not materialize, there would be demand for a larger fall opening. I oppose this bill because no such degree of inflation is needed, nor is it desired by any considerable number of practical business men. The advocates of the bill declare the New York bankers do not want it. Certainly the Western bankers do not want it. The Western banks were never in such strong position as they are to-day. The situation in the West does not warrant this clamor for inflation. There is no menace to our prosperity in present financial laws. Now that the stock market sleeps, there is nothing threatening our commercial peace and quiet except the labor question. If the thinkers would avoid the next business crisis, panic and depression, let them solve the labor question. The conflict between labor and capital promises to be the cause of the next commercial disaster.

No, this propaganda is a demand for more money. And we do not need more money for legitimate purposes. I can see asset currency advocates prick up their ears hearing the word money used in this sense. Several of them have criticized Mr. A. J. Frame, an able opponent of asset currency, for this use of the word. I ask the inflationists to look into any unabridged dictionary before repeating this criticism. Money is any accepted medium of exchange. It might consist of shells, of beads, even of old shoes. It does embrace gold coin, silver coin, Government note issues, bank-note issues authorized by the Government, the minor coins issued by the Government. Checks and drafts are also money in the

broad sense. It is true that all our forms of money, except checks and drafts, are inelastic. But over 90 per cent. of our business is done in check and draft money. It is in this bank credit money that we find elasticity in its truest sense. Its volume is regulated by public needs and public confidence. The control is where it should be, with the public. It is in this great system of credits that we get the best kind of elasticity—automatic, adjustable, adaptable. The asset currency advocate asserts that the elasticity of our check and draft system does not answer our purpose, because it contracts when confidence contracts. They want a form of credit that will expand to fill the void created by retreating confidence. When confidence is strong every form of credit is brought into active service to the fullest limit of expansion. When confidence is weak the various forms of credit contract—the more undesirable the form of credit, the greater the degree of contraction. Therefore, quite naturally the greatest degree of contraction is in our volume of checks and drafts. This is a natural financial law that cannot be repealed by legislation.

I might discuss the multitude of misstated facts and perverted theories advanced by inflationists, but I have already taken too much of your time. A moment more and I am through. I have not burdened you with statistics. I might tell you that New York exchange was at a premium in Chicago last fall and so prove that the West had more than sufficient crop money. But that would be a perversion of the truth and conservatives are well pleased to leave the distortion of facts and figures to the radicals. I might prove by comparing Canada with the United States that branch banking and asset currency retard or rather prevent growth, while independent banks and bond-secured currency force the process of development. But I think it is a joke to compare Canada with the United States. And this is a serious subject. The radicals take the few banks that survived the privilege of issuing asset currency as proof positive that the 5,000 banks now in the National system and those of the 10,000 other banks that might come in looking for easy profit could be safely granted this same special privilege. The radicals tell us that we are money-lenders ignorant of finance. And we tell them that a banker or money-lender can get along quite comfortably without knowledge of finance, but a financier is sadly handicapped by ignorance of practical banking. They tell us we are unpatriotic. We retort most courteously that it is not always the fellow that can holler the loudest who is the most patriotic. We beg of them to teach us—to rescue us from the pits of ignorance, the depths of prejudice. Teach us to be more than mere money-lenders. Show us how to develop our lungs so that we too may be patriots. We are willing to learn. We would if we could reach the high eminence attained by financial experts, if the way were not obscured by an impenetrable mesh of sophistry and manufactured fact. Let them prove the need of this new currency. Let them show us how they will obtain the additional reserve money required. Let them present a plan for imparting elasticity to the issue and maintaining it. Let them prove that a depositor of a failed bank would be no worse off than under the present bond-circulation system.

The radicals ask us to listen to their views. We have been listening for these seven years past, and will patiently listen for seven years more. We will examine their plans, and stand ready to welcome with loud rejoicing a scheme to render the circulating medium elastic, without inflating it. They declare themselves opposed to inflation, and in favor of elasticity. The conservatives are opposed to inflation, and are in favor of elasticity. If words mean anything, the radicals and the conservatives are absolutely agreed. But the performances of the radicals are so very different from their promises. Both expert financiers and political financiers have offered many currency plans. They have come to us bearing the endorsements of the financial big wigs. And yet a boy in the primary class in finance knew not one of the plans would work as promised by their promoters. We have had the several Fowler bills all offering inflation without the slightest degree of elasticity. If Mr. Fowler is honest in his declared aversion to inflation, he would no more vote for his own bill than you, or I, or any other conservative would.

A "DANGER-SIGNAL" CURRENCY.

The very latest offering is Secretary Shaw's "danger-signal" currency. If an emergency arose, and you had the privilege of issuing this six per cent. red-light credit note, would you do it? Not if you could borrow sufficient to tide you over. You would pay eight or even ten per cent. for money sooner than advertise your weakness. Mr. Shaw probably threw out this administration suggestion to see how it would take. Well, it doesn't take.

Unless the advance agents of financial revolution can produce in the near future working plans for a credit currency that will contract and expand automatically, and yet never inflate our volume of money, nor decrease the depositors' security, I, for one, favor the passage of the Aldrich bill as the safest and most acceptable of the inflation measures. The first part of that measure, at least, should be given force of law. There is no urgent call for the passage of the latter part of the bill, contemplating as it does, an increase in the aggregate of bonds available as security for circulation.

I believe we are all agreed that the Government should cease to hoard its cash at a time when it is most needed by commerce. If other depositors pursued the same policy as the Government—if they, too, withheld their receipts from deposit when the products of the soil were awaiting distribution, a commercial cataclysm would sweep down upon us the very first fall. Why should the Government's operations be permitted to stand as a constant menace to trade? The general Government is more interested in the general welfare than any single individual. Why should the Government, then, with the utmost calmness, do every year what the individual never does except when in a panicky condition? There is no voice raised against the passing of the Sub-Treasury, except perhaps the politicians who are given place under the system. Then why not abolish the Sub-Treasuries, even if we have to pension the gentlemen in charge of them. The Government should keep all of its funds in the banks. The first part of the Aldrich bill provides the way. There can be no sound objection to the substitution of bonds other than governments as security for Government deposits, interest at the rate of $1\frac{1}{4}$ per cent. to be paid on such deposits. There must always be special security for Government deposits, and the kind and character of the security must not be left to the discretion of any Government official. If it were otherwise, Government deposits would go to the banks favored of politicians. And the banks favored of politicians are seldom safe banks.

After the passage of the first part of the Aldrich bill, there would be nearly \$160,000,000—1890—2's available for additional circulation. And this would be enough for sometime to come. I know that some of the assetists think the taking out of circulation based on Government bonds in some occult way reduces the volume of loanable funds. But it doesn't. I can assure them that whatever circulation is taken out is just so much added to the general volume of currency.

Here we have all financial legislation needed for the present. We are not called upon to legislate for generations yet unborn. The Government would no longer be in a position to absorb our supply of money when needed most. There would be sufficient available bonds to provide a basis for such additions to our currency as might be needed for some time to come. And our system of bank credits would continue to provide the requisite elasticity. And confidence would be the elastic factor as it is now and ever will be, no matter what system you may adopt.

John Perrin, of Indianapolis, introduced the following resolution :

Resolved, That this convention appoint a committee of five members of this association to confer and act in conjunction with like committees appointed by bankers' associations of other States, and with such committees as that appointed by the Chicago Bankers' Club, with the purpose of following all proposed Federal legislation changing the present banking law or affecting banking interests, and to take such action as in their judgment the circumstances require.

This resolution was adopted and the following committee appointed: John Perrin, V. T. Malott and J. P. Frenzel, of Indianapolis ; C. H. Worden, of Ft. Wayne and J. H. Cutler, of Evansville.

The following resolution was also adopted :

Resolved, That this association recommend to the coming Legislature that the three days of grace be stricken from the statutes ; also that paper maturing on a holiday be payable the following day.

At the second day's session Hon. Charles N. Fowler, author of the Fowler bill, and Chairman of the Banking and Currency Committee of the House of Representatives, was introduced, and spoke in part as follows :

ADDRESS OF HON. CHARLES N. FOWLER.

Mr. Chairman, Ladies and Gentlemen—It gives me singular pleasure to address the bankers of the great State of Indiana. I am, indeed, keenly appreciative of the honor accorded by your invitation, not only to me personally, but also to the Banking and Currency Committee of the House of Representatives, of which I am the chairman.

Yesterday there appeared upon this platform a gentleman who took occasion to make a few remarks to which, in the outset, I would advert. With strange accuracy he described, in his own words, his speech. He used these peculiar words in conjunction : "Pessimistic gloom and gloat." When you go home and this speech is printed, keep those words in mind. I think you will agree with me that they accurately describe his remarks. He speaks of the radicals and of inflation, and since he mentions no other name in his speech but mine, I must be the King of the Radicals, the King of the Inflationists! The first speech I ever made in

Congress, in 1895, was in favor of a single gold standard. Now, that was an inflation speech. There were, at that time, as I recall it, two hundred and thirty-one Republicans, three of whom stood up for the gold standard. They were all inflationists; they were the radicals who, if they were in this building and it should take fire, would leave it immediately, while the conservatives would stay while it burned down over their heads. He asserted that asset currency could not be successful without branch banking. They have absolutely no relation to each other in principle. He says that it is impossible to combine perfect safety with perfect elasticity. If he means perfect, then I say he is correct, because there is nothing human that is perfect. But if he speaks humanly, then I say it can be perfect, as perfect as anything else human can be rendered perfect.

Does he mean to tell you that the bank notes of Canada are not perfectly safe? Does he mean to tell you that the bank notes of France, eight hundred million of them, are not safe? Does he mean to tell you that four hundred million of German notes are not safe? They are just as safe as human affairs make things safe; and they are, at the same time, perfectly elastic.

He said that I have assaulted the National bank note, because I said that no National bank note or National bank credit is bound to be redeemed in gold coin, and to prove it he said that I had stated that they could be redeemed in United States notes, which were, of themselves, worth nothing, or in silver dollars worth about thirty-five cents.

In what relation did I use that language? That is the question. In this relation: That I am one of those who believe that the banks of this country should furnish the gold with which to redeem their obligations, and not the United States Government. Is there a man here who thinks that the United States Government should go on forever responding to the call for gold through United States notes? If so I would like to see him rise. I would protect the credit of the United States against assault, and not assault it.

Then again, he said that the Fowler note is absolutely safe, and that it would circulate at par. When I read that, in the light of all the other things he said, I began to doubt whether it was. Now, I hope that I may not be quoted at some future time by some other person as having said that I doubted the safety of the Fowler note, because I believe that it is as good as gold coin. He said:

"The advocates of asset currency have at last learned the true meaning of elasticity." Eight years ago I introduced a bill for credit currency, providing for its constant redemption in gold coin.

He asserts that this propaganda is a demand for more money, and we do not need more money, but he winds up his speech by saying that if they will only pass this Aldrich bill it will give us a hundred and sixty millions of dollars for additional circulation, and that will be enough for some time to come. In another paragraph, in discussing the Fowler bill, he said it would add about a hundred and eighty-five millions to our currency. So you see we do not disagree very much as to the amount.

Then he said—I hope he is here. Is he here, Mr. Chairman? Is Mr. Flynn here?

THE PRESIDENT: Yea, I think he is present.

MR. FOWLER: Well, I hope he will listen, now, because I want him to answer a question or two after awhile. He said yesterday: "I might discuss the multitude of misstated facts and perverted theories advanced by the inflationists." Now, I want Mr. Flynn to rise in his place and give one misstated fact that I have ever given in any publication that I have ever sent out.

S. R. FLYNN, of Chicago: Mr. Fowler, pardon me, but I simply rise to make this statement: I did not care to make my discussion of asset currency or inflation a personal matter. My reference to Mr. Fowler was a necessity. He is the author of the Fowler bill. I was discussing the Fowler bill, and I referred to Mr. Fowler in terms of the utmost respect, and I have always done so. I have been exceedingly astonished at the way Mr. Fowler has treated my address; therefore, I refuse to enter into any discussion with Mr. Fowler on this point, because, as I say, I do not care to make this a personal matter. It is not personal with me.

MR. FOWLER: We are here to discuss truth and facts, and men who make speeches upon false assumptions to mislead the public must stand the judgment of honest men. I challenge you, sir, to make one allusion to one misstated fact that I have made in seven years in my speeches.

MR. FLYNN: And I challenge Mr. Fowler to point out in anything that I have ever written, or spoken, any charge against him.

MR. FOWLER: "I might discuss the multitude of misstated facts and perverted theories." Now, I do not know what a perverted theory is, myself. I could tell if a fact was brought forward that was misstated, but he will mention no fact that I have misstated. I will come, pretty soon, to the respect with which he has treated me, my friends, and you, I think, will know whether he knows how to treat a man with respect.

"We might tell of the troubles"—these are his words—"We might tell of the troubles

that have come to the nations using asset currency." I challenge you, here and now, before this body, to mention one instance in this country, even in the early days, or in any country in the world, where the principle of credit currency has failed, as I propose.

MR. FLYNN: Mr. Fowler, will you allow me to make one more remark?

MR. FOWLER: You may have an hour.

MR. FLYNN: I want to know what your plan is.

MR. FOWLER: I will come to that in due time. He will state no case in two hundred years where the principle of a true credit currency has ever failed. No case in two hundred years.

Now, how respectful he was to me! Indeed, this is the most respectful treatment that I have ever had! "If Mr. Fowler is honest"—think of it—"in his declared aversion to inflation, he would no more vote for his own bill than you or I or any other conservative would." Isn't that the highest respect you could pay a man?

I am sorry, indeed, that circumstances have rendered it necessary that any man should be pilloried before an audience, but I felt that it was my duty to remove from your minds two things: First, that you have heard something based upon false assumption; and in the next place my good faith, my honor was challenged, when he uttered those words, and I felt that I must reply. For eight long years I have advocated certain reforms in this country. I introduced a bill in favor of retiring the demand obligations of the Government, and funding the debt in gold coin, and in favor of branch banks. I have lived long enough to see the accomplishment of two of those things, and I believe that I shall live to see a credit currency established. There is no other way out of your difficulty. I shall see the United States notes disposed of. If there shall be a retirement of United States notes upon the convening of the next session of Congress, I shall feel that I have not lived in vain, and that I have served my country to a degree.

Recently I was asked to make an authoritative statement of the financial and currency legislation I deemed essential to our present needs. In compliance with such request, I expressed my views as follows:

First, I urged the passage of a law requiring the National banks to carry at least 40 per cent. of their cash reserves in United States notes.

Second, I urge the passage of a law authorizing the Secretary of the Treasury to deposit all public moneys, from whatever source received, in excess of fifty millions, with such National banks as he may select, without requiring the deposit of Government bonds, but that such deposits shall be a first lien upon the assets of the banks with which they are deposited; provided, however, that the Secretary of the Treasury shall not deposit with any National bank an amount greater than 50 per cent. of its paid-up capital, and that the banks shall pay interest on such deposits of public moneys at the rate of 2 per cent. per annum, payable semi-annually.

JOHN PERRIN: Do you advocate the idea that the Government should have the first lien on the assets of the bank to secure its deposits in case the circulation was not based upon the bonds?

MR. FOWLER: Yes.

MR. PERRIN: The Government having first lien I would like to know what you have to say with reference to the rights of the depositor—where the Government has a first lien on the assets of the bank?

MR. FOWLER: Let me see if I get your question right. You ask me what relation the depositor would then sustain to the Government and to the bank note. It would be precisely the relation that he sustains to-day, the only difference being this: That to-day the Government has a first lien because the banker, before he gets the deposit, takes a certain portion of his money and buys bonds and hands them over to the Government, and that makes it a first lien; not only a first lien but an executed lien, the property being seized and segregated and set apart to secure the Government. In the case of the bank note, the law to-day provides that the bank shall not only deposit Government bonds to secure the bank notes, but if the Government bonds are not sufficient to pay the bank notes, the Government still has a first lien on the assets of the bank.

Therefore, with bank notes secured by bonds which are purchased out of the deposits or capital of the bank, the relation of the depositor would be identically the same under this law as it is to-day, not differing in the slightest degree. Do I answer your question, Mr. Perrin?

MR. PERRIN: Not entirely. If the assets of the bank are sufficient to pay fifty per cent. of the deposits, and the Government shares pro rata, or the note holder shares pro rata, the depositor in that case receives fifty per cent. of his deposit, but it is possible that the notes outstanding, where the Government had a prior lien, might absorb the entire assets of the bank, and the depositor be left with nothing.

MR. FOWLER: That is true. But if the bank had taken the fifty per cent. that was left and bought bonds with it, the depositors would have got nothing either. It would be the same position identically.

I now return to my plan. Third, I urge the passage of a law permitting any National bank which shall have and keep in circulation an amount of bank notes secured by Government bonds, as now provided by law, equal to fifty per cent. of its paid-up capital, to issue an amount of credit currency equal to twenty per cent. of its paid-up capital; one year thereafter to issue an additional amount equal to ten per cent. of its paid-up capital; two years thereafter to issue an additional amount equal to ten per cent. of its paid-up capital, and three years thereafter to issue an additional amount equal to ten per cent. of its paid-up capital, making a total issue of credit currency of fifty per cent. of the paid-up capital. Such notes to be a first lien upon the assets of the banks issuing them, and the banks to pay a tax of two per cent. thereon per annum, payable semi-annually.

From an economic point of view, I submit the following observations as being obvious:

First. There is no reform at this time so important as the retirement of the demand obligations of the Government, thereby protecting the gold in the Treasury.

A law requiring the banks to hold forty per cent. of their cash reserves in United States notes will be no inconvenience to the banks, as to-day they voluntarily hold one hundred and sixty-three millions of them, and yet will lock up so large a portion of the notes as to completely divest them of the power of harm which they must have so long as they remain in general circulation.

Second. A law authorizing the Secretary of the Treasury to deposit all public moneys with the banks precisely as the great municipalities and giant business corporations of the country do theirs would place the Government in the same position as that now occupied by every other civilized government in the world.

Again, an investigation has demonstrated that if the Government had adopted this policy during the last twenty-four years, it would not have lost a single cent, but, on the contrary, the interest paid to the Government by the banks would have reached nearly fifty millions of dollars.

Third. There never can be a true, elastic currency, one that will expand and contract with the business of the country, which is not itself directly related to the transaction of that business, precisely as checks and drafts do, and disappearing like them when the work for which it was created has been accomplished.

That such a currency can be made absolutely safe has been demonstrated beyond peradventure; and, as one of the incidents of the law I urge that banks taking out credit currency for issue should deposit in the United States Treasury, in Government bonds or gold coin, an amount equal to five per cent. of the notes so taken out. This five per cent., together with the two per cent. interest upon Government deposits, and the two per cent. tax on the credit notes, should constitute a guaranty fund, but when said guaranty fund amounted to ten millions of dollars, the excess over such amount should be appropriated for the purchase of gold bullion, to be placed in the issue and redemption division of the Treasury for the purpose of converting the United States notes, not now covered by gold coin, into gold certificates. The effect of this plan would be to completely protect the Treasury against assault, the notes, as above observed, being rendered absolutely harmless in the meantime by being held as part of the bank reserves.

Some such legislation, as thus outlined, is, I am convinced, essential at this time to take the Government out of the banking business, to keep our surplus moneys in full and free circulation and to secure a currency, as safe as it is cheap, at all times automatically responsive to and adequate for the demands of trade. These are important questions, my friends, vitally affecting not only our home industries, but the broader markets of the world, where we are daily making ourselves more and more felt.

United States Senator Beveridge next addressed the convention.

The following officers were chosen: President, Walter W. Bonner, Cashier Third National Bank, Greensburg; vice-president, A. G. Lupton, Cashier Blackford County Bank, Hartford City; secretary, Andrew Smith, Assistant Cashier American National Bank, Indianapolis; treasurer, William C. Thomas, Cashier Logansport State Bank, Logansport; vice-presidents-at-large, William F. Churchman, Cashier Capital National Bank, Indianapolis, and Myron Campbell, Cashier South Bend National Bank, South Bend.

PENNSYLVANIA BANKERS' ASSOCIATION.

The ninth annual convention of the Pennsylvania Bankers' Association was held at the Hotel Schenley, Pittsburgh, September 23 and 24.

Vice-President D. McK. Lloyd presided, President J. R. McAllister having been called from the convention by a death in his family.

Addresses of welcome were made by City Solicitor W. B. Rogers and James H. Willock, President Second National Bank, Pittsburgh.

The annual address of President McAllister was read by A. A. Stevens, of Tyronne. After reviewing the work of the association, and pointing out the benefits conferred upon the bankers of the State, the address concluded as follows:

"A season of sanity and retrenchment is on. Only good can result from this. No worthy enterprise need suffer for the want of money. That propositions of great magnitude can be readily financed is proved by the success of the Pennsylvania Railroad in recently raising \$90,000,000 on securities representing only \$75,000,000 at par.

Material progress has been shown in every department of banking in this State during the past year. The statistics showing the business of our National banks are public property. We are especially interested in the condition of our State banking institutions. Since November 30, 1902, there have been chartered in this State fourteen banks and sixty-nine trust companies.

Official figures for the six months ending May 29 last show that our State institutions have increased their capital \$10,544,000. The increase shown in surplus is \$19,182,000. In deposits the increase is \$42,177,000. In loans the increase is \$24,988,000 and in investments the increase is \$17,069,000. The same record shows a decrease in undivided profits of \$558,000. All these figures prove that prosperity is still with us.

From the farms of the great 'out West,' from the cotton-belt of our New South, from the spindle-rooms of New England, from the coal-fields of Pennsylvania, and from all the markets of our wonderful country, we hear the cry 'All's well!' and may we not here to-day send a message to the world, 'All's well.'"

Secretary D. S. Kloss reported that the membership of the association is now 621, an increase of ninety-four since the date of last year's convention.

Treasurer Lindemuth made a satisfactory report of the association's finances.

L. K. Stubbs, Secretary of the Trust Company Section, made an interesting report, which was in part as follows:

"The first report of the State Banking Commissioner was made in 1892, and showed seventy-six trust companies with \$89,000,000 deposits. The 1902 report showed 175 trust companies under the supervision of the department, with \$266,000,000 deposits. Since which time, from figures obtained from the banking department, we learn that seventy-six trust companies have been organized.

The report of the Comptroller of the Currency, in 1891, showed that there were, in the United States, 171 trust companies, with \$355,000,000 deposits. According to his report in 1902, there were 417 trust companies, with 1,500 million dollars deposits; an increase of over 300 per cent. in deposits between the dates of the two reports. Of this 300 per cent., 150 per cent. of the increase has taken place during the last five years.

These figures show the rapid growth and development of the trust companies in Pennsylvania and the country at large, and demonstrate the wisdom and necessity of organizing the Trust Company Section. The membership of the section has been largely increased during the last year. Special efforts toward increasing the membership have been made by means of circular matter issued from time to time. The results have been quite gratifying, and we now have 106 trust companies of this State enrolled as members."

Reports were presented from the banks in the eight groups into which the State is divided. They all told of exceptionally prosperous conditions.

Dwight M. Lowrey, a member of the Philadelphia bar, was introduced and delivered the following interesting and able address:

ADDRESS OF DWIGHT M. LOWREY.

Adam Smith once testily observed that it was impossible to hold a convention of men engaged in the same kind of business, without its resulting in a conspiracy against the public interest.

True enough, business men in convention assembled have often seemed to be chiefly occupied with schemes for raising prices, limiting production, and excluding competition.

For this reason, it is particularly refreshing to stand in the presence of an assembly like this, whose object is not gain, but improvement, not proscription but discussion; whose deliberations are concerned, first of all, with the problem of the greater efficiency of service, in the serene confidence that to them who serve well all things else shall be added.

The proud advance of our American people in general refinement and in liberal culture, is in nothing more marked than in the ever-increasing number and variety of the associations in which business men, of the same or kindred occupation, meet and exchange counsel and reflection upon the topics which lie closest to their observation.

It is difficult to over-estimate the broadening and elevating influence of such gatherings. They pleasantly interrupt the dull routine of commercial and industrial employment; they embellish a business connection with the graces of social intercourse; but more important still, they temper the strife of commerce with the spirit of philosophy, and throw into the somewhat close and selfish atmosphere of the counting-room an invigorating draught of free and scientific inquiry.

We may congratulate ourselves not merely that these things are done, but also upon the way in which they are done. The Americans are bringing the shop and the university together. We hear so constant and so great chatter about the intense materialism of our American civilization. We have been represented abroad, and we have come at home to believe ourselves, to be exclusively interested in the quest of the almighty dollar.

We are in business. It is true, and we are in business for profit, but the American is not sordid. Our success in acquiring wealth is not due to any extraordinary avarice. It is due rather to extraordinary power—not mere money-grabbing power, but wealth-creating power.

The wide range of subjects treated at your bankers' conventions exhibits a discussion which covers questions of law, of economics, of administrative regulation, of ethical standards, of business opportunity and of business duty; in fact, everything from the details of practical organization and accounting to broad generalizations upon business theory, and upon social conditions in this country and abroad.

When we remember that these terse and vigorous papers expressed in correct and often flowing English, touching not rarely on the most intricate problems of economic and social philosophy, and glowing at times with a genuine and lofty moral enthusiasm, are the work not of professional writers and investigators, but of men who stand, as the Germans say, "with their feet in affairs," we are close to the secret of that wonderful civilization which is unfolding in the United States.

The habit of mind which is illustrated by this and similar associations is the true explanation of our swift and irresistible advance.

We are outstripping our English cousins, because in a greater degree we bring to the consideration of business problems the spirit of scientific inquiry. Why not? The laws of trade and of manufactures, the problems of transportation, the organization and direction of labor, the custody and movement of money, the economic aspects of the habits, tastes, necessities and convenience of men, are subjects of as great dignity and as great difficulty as are the generation of bacteria, the relative position of the fixed stars, or the grandeur and decadence of the Roman Empire.

Business life in America gives ample play for, and indeed constantly displays, not mere smartness, but intellect of the highest order.

In the beginning, in New York, and in a measure, in Pennsylvania, a deliberate attempt was made to reproduce the old-world conditions of landed proprietorship. It failed.

The War of the Rebellion destroyed forever the prestige of the Southern planter, even in the South. But Virginia, through a century of glorious history, has shown us here at home what the patrician spirit can do, until at last, sinking in the death throes of her peculiar social order, her gallant and indomitable resistance, through four dark and bloody years, challenged the wonder and admiration of mankind.

BUSINESS MEN ARE GENTLEMEN.

No, the civilization of the United States is a business man's civilization. America's gentlemen are in business, and America's business men are gentlemen. They cultivate their minds and tastes. They read, write and converse well. They endeavor to know something of art and song and music. They send their children to school and to universities, and they spare no effort to gain contact with the refinement and polite custom of those whom the longer possession of ample means have permitted to acquire a more pleasing cultivation. They cover the land with colleges, universities, hospitals and homes and retreats for every form of distress. Not a river can overflow its banks, nor a fire burst forth in destructive energy, anywhere in the civilized world, but our business men, promptly and without ostenta-

tion, contribute of their store to the relief of suffering. Slowly and surely we are working out a new and strange social order.

THE BANKER A POWERFUL FACTOR IN SOCIETY.

The lawyer is still a convenient spokesman, the clergyman is still an honored guide, but the leadership and relative importance of these two professions is gone forever. They have taken their places in the ranks of the social army. The real social leaders are the men of affairs, the bankers, the railroad managers, the engineers, the merchants and the manufacturers.

They are not content with owning newspapers, they write books and contribute essays to the magazines. They have no need to employ counsel to present their views and advocate their interests before the public, still less do they confine themselves to the collection of data for clever writers to arrange and exploit; on the contrary, they address societies and conventions, and they go upon the hustings to discuss public affairs and to influence the expressions of the popular will. These things were practically unknown fifty years ago.

Two business men are contending to-day for the leadership of the State of Ohio. Both are the possessors of large fortune, accumulated by their own labors. Both are experienced and able public debaters. They differ in manner and method, but both are vigorous thinkers; and it safe to assume that in the coming canvass each will say many things that his opponent might profitably ponder on. Both are ambitious for wealth and power, but only a narrow intelligence will question the genuine patriotism of either.

Some persons are seriously disquieted by what they call the growing influence of the money power. To their heated imaginations the time is close at hand when what they somewhat vaguely style "capital" will seize the reins of government and enslave the great body of the people.

It would comfort these fearful souls if they did but reflect that men of wealth are apt to be endowed with foresight—otherwise, they would not be wealthy. Why should they want to enslave their neighbors? Slaves cannot buy goods. And if the wealthy cannot sell goods, what will become of their wealth? No nation ever yet was corrupted and destroyed by wealth which was the product of its own honest toil. We are not engaged in dividing the booty of conquered tribes. Our workers and business men create what they enjoy.

A sagacious writer has very justly remarked that men are rarely so innocently and beneficently employed as when engaged in making money. Society may sometimes be fretted and annoyed, but it will never be seriously injured by combinations of capital, however great, which have for their object the production of new wealth, its transportation to distant points, and its distribution among different communities.

The wealthy are not apt to forget, though critics may, that accumulated wealth is useless except for its value in exchange. And the moment exchange begins, its hoarded benefits are quickly and sensibly disseminated among the entire community, aiding and stimulating others to like helpful accumulation and enjoyment.

The change which is noticeable in America is manifesting itself in the old world as well. That social and political leadership which for centuries has belonged to the men who, by their ownership of the soil and of natural opportunities, were enabled to lay continuing tribute upon those who produce and distribute wealth, is throughout all Europe now rapidly passing into the hands of the men who organize and direct the industrial forces of the world.

It is curious to note the frenzied and discordant protest with which the representatives of the old order attempt to roll back the mighty change. We may rely on the people to deal with them. Our people know that declamation, though it may bewilder, cannot check a social tide. I mean the well-intentioned protest that comes from the literary and professional classes.

A CARICATURE OF THE BUSINESS MAN.

France to-day is seriously discussing a new and vigorous play, entitled "Business is Business." It was produced at the leading theatre of Paris last April and immediately printed in book form. The book has had an enormous sale, and the play itself a loud acclaim. You are threatened with a reproduction of it on the American stage this winter. Its literary and artistic merit is undoubted, but need not concern us. Its social significance arrests attention. Its chief figure is a gross and ignorant libel on the modern man of affairs; a vile, lecherous, tyrannical, prosperous thief, whose vast fortune is built up on force and fraud, wet with the tears of widows and orphans, and stained with the blood of friends deceived. He buys and manacles the press, invades and degrades the church, cajoles and deludes the electors, humiliates and prostitutes to the service of his mean ambition the ancient nobility, whose state he envies and emulates, but whose dignity and tradition are incomprehensible to his vulpine intellect. His daughter he holds for sale for a title, and as he disappears from

view he pauses to sign a syndicate agreement before he goes to throw himself on the dead body of his only son.

On both sides of the Atlantic the people who write reviews are holding up this distorted horror as a type of the modern movement; politicians of a certain sort here are voicing the same evil calumny. Newspapers of a certain sort are with unwearying clamor repeating the same wild and mendacious strain. They are all willing to slander what they do not understand.

THE TRUE PORTRAIT OF A BUSINESS MAN.

Shall we not, then, emphatically declare what the American business man really is? I do not mean to sublimate him. Sometimes, with broken harness and battered shield, he comes laden with booty up from the field where he left his honor.

Nevertheless, it may be confidently asserted that there is no great wealth in this country which is founded solely on force and fraud. The wealth of America is the sure proof of the virtue of America; for the production and accumulation of wealth presuppose virtue. Honesty in business is not only the best policy, it is the only policy. Men whose long lives of business accomplishment proclaim their general good practice, sometimes do things that will not stand scrutiny—but no mere knave ever was, or ever can be, a business success. Knavery in business is as fatal as cowardice in war.

If our industrial organizations were, as is often confidently asserted, conceived in fraud, and developed in iniquity—the whole fabric had long since fallen to pieces.

Putting aside some special forms of property like the ownership of a corner lot, which sometimes wears the aspect of legalized plunder, and speaking generally—a man's wealth is the measure of the service he has rendered to mankind.

"Business is business." This is no mere aphorism of cynical avarice. On the contrary, it indicates a profound truth. It means that the laws, standards and methods of business are peculiar to themselves, and social progress demands a strict adherence to their requirements. The same thing is true of war, religion, government and every other form of human activity. It does not mean that bad methods are good, because they may yield a momentary financial advantage. Still less does it mean that business is robbery—nor that spoliation and chicanery are its characteristic features.

Business does not undermine the character of good men—it strengthens and establishes it. Thackeray understood this when he wrote *The Newcomes*. Colonel Newcome is, perhaps, the finest gentleman on the pages of English fiction, and there is a text for a hundred sermons in his sententious remark: "Money is character."

In truth, business is the foundation on which all civilization rests. The accumulation of wealth is the first condition and prerequisite in the development of sound knowledge, polite culture and pure religion.

And just in proportion as knowledge increases, as manners soften, as in religion superstition gives way to the thirst for righteousness, business broadens its lines, extends its sympathies and elevates its standards, without in the slightest departing from its essential rule and method.

No thoughtful man supposes that we have attained perfection in business ethics in this country, but every man in this hall over forty years of age can testify from his own experience to a constant improvement. There has been a steady improvement in the direction of better goods, fair prices and prompt payment. Lower rates and better service is the watchword. Not as a concession to our poverty, but as the triumphant accomplishment of our increasing wealth. Short weights and cunning are the weapons of the poor; rising affluence gives us fixed standards and good measure. The term shoddy, which was in every man's mouth when we were boys, has practically disappeared from the vernacular.

CREDIT ON A SOUND BASIS.

Credit is on a sounder basis than ever before. In 1837 and again in 1857 every bank in the United States suspended payment. Such a condition of affairs is inconceivable now. The laws have been changed, it is true, but the difference is not due to the law. The new laws are due to the rising intelligence and to the hardening moral fibre of the business world. Business makes civilization and civilization reacts on business, with ample usury. Standards and methods are improving as well as laws. The sense of co-ordination and interdependence is growing. In 1837 and 1857 the banks of this country stood separate and alone. During the first nine months of this year, when we were purging ourselves of "undigested securities" and letting water out of three per cent. stocks, the banks stood shoulder to shoulder. The stronger helped the weaker and all combined to distribute and carry the load of failing fortune, to the end that the general business of the country might be sustained.

In these days, when so much turgid rhetoric is poured forth over the cornering of money and the "cross of gold," it would be well if the true story of that time of stress could be

brought home to the American public. It would, I believe, convince all that the American banker tends more and more to consider his position one of public trust. The law says that the bank is only a debtor to its depositors, and that its stock is a commercial venture—but good bankers, and they are the majority, do not stop there.

The rise of the trust companies has, no doubt, contributed to the growth of the new sentiment. These companies, indeed, have a capital stock on which they hope to earn substantial profit; they receive deposits for which they are liable only as for debt, and they deal in their own and their depositors' funds for gain. But they go farther. They definitely assume all the positions of trust and confidence known to our social needs. They are at the same time banks and trustees, and they have tended powerfully to permeate all the circles of banking with the rare atmosphere and high standards of the fiduciary relation. The standards and responsibility of the trust department tone up and steady the bank.

All standards of honor are class standards, and it takes time for them to grow. It takes time for the class to crystallize so as to enforce its traditions. Banks, as we know them, are hardly more than 200 years old. But the time is not far distant when no bank President can, without ostracism, aid one set of speculators to get control of a railroad company, by suddenly calling the loans made to rival owners of the stock.

The banker of to-day is prudent; to-morrow he will be impartial. It will then be no more possible to use the power of a bank as a weapon of destruction than it is now to so use the Treasury of the United States.

Such a President will take his place with Benedict Arnold and Marshal Bazaine. No law can reach him. He will die of the contempt of his class.

This is no new thought to you. Your deliberations have always pointed in that direction. Certain it is that society will find its best, perhaps its only sure, protection against the machinations of the selfish rich, and the insurgence of the resentful and uninstructed poor, in the development and enforcement of your own high principle that banking is a public trust.

D. C. Wills, of Pittsburg, gave an account of the aims and operations of the American Institute of Bank Clerks.

W. H. Smith, of the State Banking Department, gave a history of the recent banking growth of the State, and Hon. Charles G. Dawes, President of the Central Trust Co. of Illinois, Chicago, and former Comptroller of the Currency, spoke in opposition to a general scheme for asset currency. He thought such an issue should be highly taxed, and that note-holders should not be given a first lien on the assets of insolvent banks.

The following officers were elected, after which the convention adjourned:

President—D. McK. Lloyd, President People's Savings Bank, Pittsburg.

Vice-President—W. H. Peck, Vice-President Third National Bank, Scranton.

Secretary—D. S. Kloss, Cashier First National Bank, Tyrone.

Treasurer—E. E. Lindemuth, Treasurer Clearfield Trust Company.

Delegates to American Bankers' Association: R. J. Stoney, of Pittsburg; W. J. McLearn, Philadelphia; Grier Hersh, York; H. D. Flanagan, Nanticoke.

MARYLAND BANKERS' ASSOCIATION.

A joint convention of the Maryland Bankers' Association and the District of Columbia Bankers' Association was held September 24 and 25 on board the steamer Norfolk, a trip being made down the Potomac River and Chesapeake Bay.

Charles T. Crane, President of the Farmers and Merchants' National Bank, Baltimore, presided. In his annual address he referred to the spirit of gambling, which had led to inflation and subsequent depression in the stock market, but said that most of the industrial and commercial interests of the country were in a sound condition.

Hon. Leslie M. Shaw, Secretary of the Treasury, made an address. He said that the Government either must issue more bonds as a basis for National bank circulation or provide some substitute. The present volume of Government bonds, he said, is insufficient, and the price of these securities has advanced to a figure that make

National bank circulation unprofitable. But, he added, any currency system adopted must provide for complete exchangeability of every form of money, so that our people never would have cause to look twice at bills presented in the regular course of business.

Speaking of the functions of a bank, he said its success should not be measured by its dividends, but by its solvency, conservatism, and promptness to respond to its customers' legitimate needs. Its reserves, in his opinion, should be available for use in times of emergency and are not intended to be buried and never touched. The recent deposits of public moneys and offers to redeem bonds had not been made, he said, with any expectation of aiding the stock market, but solely to assure the business men of the country there would be no money famine this autumn. In conclusion he said :

"Go home and tell your merchants and your manufacturers and your railroad people that you are still doing business at the old stand and expect to remain. Stand by the business interests of the country and all will be well. The prosperity of the American people is not measured by the price of stocks and bonds, but by the output of our farms and our factories and the profitable employment of labor."

Hon. Ellis H. Roberts, Treasurer of the United States, spoke on the large increase in the stock of gold in the country, the gain since 1898 having averaged nearly \$90,000,000 annually. He said that the nation's prosperity rests on a sure and steadfast foundation.

OHIO BANKERS' ASSOCIATION.

The Ohio Bankers' Association met at Columbus, September 23 and 24. There was decided opposition to any legislation which would lead to asset currency. It was declared as the sense of the association that bank notes should be issued only on Government bonds. The preamble of the resolutions offered by a committee of which J. J. Sullivan, of Cleveland, was chairman, was stricken out by the convention, and the following resolution alone was adopted :

"Resolved, That the Ohio Bankers' Association favors such financial legislation as will enable the Secretary of the Treasury to place in circulation the surplus revenue of the Government, now aggregating many millions of dollars, together with such other financial legislation as may be found wise, safe, and entirely consistent with the principles of sound finance."

The rejected preamble declared that the present currency is inadequate to meet the increasing demands of trade at certain seasons of the year. In advocating the adoption of the report Mr. Sullivan complimented Secretary Shaw for his "able and courageous course" in coming to the relief of the country when there has been stringency in the money market.

Henry Flesh, Cashier of the Citizens' National Bank, Piqua, was elected president of the association. The other new officers are: vice-president, Charles A. Hinsch, President Fifth National Bank, Cincinnati; treasurer, H. C. Herbig, Cashier Commercial Banking Co., Coshocton; secretary, S. B. Rankin, Cashier Bank of South Charleston.

The Cashier and His Hat.—F. P. Hills, Cashier of the Delaware (Ohio) Savings Bank Co., recently saved a three-hundred-foot trestle on the Pennsylvania Railroad from burning by carrying water in his derby hat. While visiting his farm Hills discovered that the trestle was on fire. The water barrels placed near by the company were filled, but no buckets were at hand. Taking his new fall hat and carrying water in it for almost an hour, he put out the blaze just a short time before an express train went by at a speed of a mile a minute.

AMERICAN BANKERS' ASSOCIATION

*TWENTY-NINTH ANNUAL CONVENTION, TO BE HELD AT THE CALIFORNIA
THEATRE, SAN FRANCISCO, CAL., OCTOBER 20, 21, 22 AND 23.*

Delegates and Visitors will please register at the Secretary's temporary offices at Palace Hotel.

ORDER OF PROCEEDINGS.

(Subject to change by vote of the Executive Council or by vote of Convention.)

FIRST DAY, WEDNESDAY, OCTOBER 21, 1903.

Convention called to order at 10 o'clock A. M., by the president, Mr. Caldwell Hardy, of Norfolk, Va.

(Vice-presidents and members of the Executive Council are requested to take seats on the platform.)

Prayer by the Right Rev. William Ford Nichols, Bishop Episcopal Diocese of California.

Roll call.

Address of welcome to the City of San Francisco by the Hon. Eugene E. Schmitz, mayor.

Address of welcome to the State of California by the Hon. George C. Pardee, Governor.

Address of welcome to the American Bankers' Association by the Hon. James D. Phelan, on behalf of San Francisco bankers.

Reply to addresses of welcome, and annual address by the president of the association, Mr. Caldwell Hardy.

Annual report of the Secretary, Mr. James R. Branch.

Annual report of the Treasurer, Mr. George F. Orde.

Report of the Auditing Committee.

Report of the Executive Council, by the chairman, Mr. E. F. Swinney.

Report of the Protective Committee.

Report of the Currency Committee, by the chairman, Hon. Chas. S. Fairchild.

Report of the Committee on Uniform Laws, by the chairman, Mr. Frank W. Tracy.

Report of Committee on Bureau of Education, by the chairman, Mr. Robt. J. Lowry.

Report of Committee on Fidelity Insurance, by the chairman, Mr. John L. Hamilton.

Practical Banking Questions.

(Discussion limited to thirty minutes for each topic; open to all delegates under the five-minute rule; time to be extended by unanimous consent.)

1. Money Orders of Bankers' Association.—Address by Mr. L. P. Hillyer, Cashier American National Bank, Macon, Ga.

Meeting of Delegates from the States and Territories to appoint the Nominating Committee, in accordance with Article III, Section 2 of the Constitution, which reads as follows :

SEC. 2. Immediately after the first adjournment that occurs in the session of the annual convention, the delegations from each State and Territory shall meet, at which several meetings the respective vice-presidents of the States and Territories, if present, shall preside, and these meetings of representatives from the States and Territories shall each select a member who shall, with others so selected, constitute and be a Committee on Nominations. The committee may make its report at any subsequent session of the convention, but its nominations shall not exclude the name of any persons otherwise nominated in the convention. The delegates from the several State Banks and Bankers' Associations shall assemble and meet apart after the first adjournment, and, in such manner as they may determine, shall nominate to the convention five names for members of the Executive Council, who shall be members of this association, provided that no State association shall thus be represented by more than one member of the Executive Council. No delegate from any State association shall, however, be eligible unless he is a member of the American Bankers' Association. The election for president, first vice-president and for five members of the Executive Council to be chosen by the association shall be by ballot, unless otherwise ordered.

SECOND DAY, THURSDAY, OCTOBER 22, 1903.

Convention called to order at 10 o'clock a. m., by the President.

Prayer by the Rev. George C. Adams, Pastor First Congregational Church.

Announcements.

Practical banking questions.

Discussion limited to thirty minutes for each topic; open to all delegates under the five-minute rule; time to be extended by unanimous consent.

2. The Currency—Address by Hon. William B. Ridgely, Comptroller of the Currency.

3. Address by Mr. Homer S. King, President Wells Fargo Bank, San Francisco, Cal.

4. Money Supply of the United States—Address by Mr. J. E. McAshan, Cashier South Texas National Bank, Houston, Texas.

Call of States. Statements limited to five minutes, by bankers, of the general condition of business in their various States.

THIRD DAY, FRIDAY, OCTOBER 23, 1903.

Convention called to order at 10 a. m., by the President.

Prayer by the Rev. Bradford Leavitt, Pastor First Unitarian Church.

Unfinished Business.

Practical Banking Questions.

(Discussion limited to thirty minutes for each topic; open to all delegates under the five-minute rule; time to be extended by unanimous consent.)

5. Education of Bank Clerks—Address by Mr. J. B. Finley, President Fifth National Bank, Pittsburg, Pa.

6. Effects of the Inflow of Gold—Address by Hon. Ellis H. Roberts, Treasurer of the United States.

Continuation of Discussion of Practical Banking Questions.

Report of Committee on Nominations. Elections.

Installation of Officers Elected.

Attention is called to the following: Article VII., Section 1, of the Constitution, reads as follows:

ARTICLE VII.

SECTION 1. Resolutions or subjects for discussion (except those referring to points of order or matters of courtesy) must be submitted to the Executive Council in writing at least *fifteen days* before the Annual Convention of the Association; but any person desiring to submit any resolutions or business in open Convention may do so upon a two-thirds vote of the delegates present, the resolution or business may be referred to the Executive Coun-

oil to report upon immediately; provided that this shall not apply to any proposed amendment to the Constitution.

TRUST COMPANY SECTION.

The Convention of this Section will be held at 10 o'clock A.M. at the California Theatre, Tuesday, October 20, 1903.

SAVINGS BANK SECTION.

The Convention of the Savings Bank Section will be held in the Academy of Sciences building, No. 819 Market Street, at 3 o'clock P.M., October 20, 1903.

1. Address by Chairman.
2. Secretary's Report.
3. Report of Chairman of Executive Committee.
4. Discussion of practical Savings bank questions, and reading of following papers:
 - (a) "Bond Accounts," by Col. Chas. E. Sprague, Ph.D., President Union Dime Savings Bank, New York.
 - (b) "Savings Bank Advertising," by Lucius Teter, Cashier Chicago Savings Bank, Chicago, Ill.
 - (c) "Dangers Threatening Savings Banks," by Fred Heinz, President Farmers and Mechanics' Savings Bank, Davenport, Iowa.
 - (d) "Trust Accounts," by Wm. Hanhart, Secretary.
 - (e) "Failed Savings Banks," by Hon. Willis S. Paine, LL.D., Metropolitan Savings Bank, New York, ex-Superintendent of Banks.
5. Election and Installation of Officers.

HOTELS.

Rates will be: European plan—\$1.50 and upwards per day per person. American plan—\$2.50 and upwards per day per person. Rates vary according to location, size of room and whether rooms are occupied by one or two persons.

All delegates should secure hotel accommodations in advance. Write direct to F. H. Colburn, Secretary Hotel Committee, 208 Parrott Building, San Francisco, stating requirements explicitly: number of rooms desired, number of persons who will occupy same, American or European plan, rate willing to pay per person per day, and date of arrival in San Francisco. State also name and address of each person for whom quarters are desired, as this information will be of service to reception and entertainment committees.

The Hotel Committee is on the ground, is anxious to make satisfactory arrangements, and can do so if afforded sufficient time.

CLUBS AND ASSOCIATIONS.

Upon registering at headquarters, delegates will be presented with cards of invitation to various social clubs and commercial organizations.

REGISTRY ROOMS, MARBLE ROOM, PALACE HOTEL.

Members of the Local Committee will be in constant attendance. Also for the convenience of the members, competent stenographers, well-informed clerks, and a corps of messenger boys will be provided. In the Registry Rooms will be found the wires of the Western Union Telegraph Company (free use to members for family and social messages), Postal Telegraph and Cable Company (free use to members for family and social messages), Pacific States Telephone and Telegraph Company (free use of local telephone service to members).

ENTERTAINMENTS.

The local committee has arranged for the entertainment of the delegates and their ladies as follows:

Tuesday Afternoon, October 20th, the Century Club will tender a reception to the visiting ladies from 4 to 6 o'clock, at the Club Rooms, 1215 Sutter Street.

Tuesday Afternoon and Evening, October 20th, informal reception to all at Headquarters, Palace Hotel.

Wednesday Evening, October 21st, a reception will be tendered to the delegates and ladies at the Mark Hopkins Institute of Art, corner California and Mason Streets, at 8.30 o'clock.

Thursday Afternoon, October 22.—A steamer has been chartered for a twenty-five mile trip around the Bay of San Francisco.

Thursday Evening, October 22.—Theatrical performance.

Friday Afternoon, October 23.—Special athletic entertainment at Sutro's Baths, and a visit to Cliff House, Sutro Heights and Seal Rocks.

Saturday, October 24.—Choice of trips to points of interest within 125 miles of San Francisco, as follows:

First. To Asti, California, where the guests will be given an opportunity to inspect the model vineyards of the Italian-Swiss Colony.

Second. If visitors prefer, they may ascend Mt. Tamalpais, via the "crookedest railroad in the world."

Third. They may leave San Francisco by special train making first stop at Palo Alto, affording delegates an opportunity to inspect Leland Stanford, Jr., University, proceeding thence to the city of San Jose, California, at which point they will be entertained by the San Jose bankers and given a drive through some of the large fruit orchards.

Fourth. Another delightful trip will be made from San Francisco direct to the famous California resorts, Del Monte and the old town of Monterey.

Delegates, will, upon arrival at headquarters, please advise the Entertainment Committee which of these trips they prefer to make. The local committee of arrangements strongly urges all visitors to delay homeward departure until October 25 at the earliest.

REDUCED RAILROAD RATES TO THE CONVENTION.

Central, Michigan, and New England Passenger Associations, and Trunk Line Association have granted a rate of eighty per cent. of double the one-way first-class fare, via route of ticket for the round trip from points in the territory of the Central Passenger Association to the gateways of the Trans-Continental Passenger Association (Cairo, Chicago, Hannibal, Peoria and St. Louis) added to the following round trip fares rendered by the Trans-Continental lines.

Dates of Sale.—Tickets may be sold October 7 to 16, 1903, inclusive; also on October 17 for such trains as will deliver passengers to trans-Continental lines in time to leave either Cairo, Chicago, Peoria, Hannibal or St. Louis on the same day. In no event, however, should passengers reach the gateways named earlier than October 8, nor later than October 17, 1903.

Final Return Limit, November 30, 1903.—The Trans-Continental, Southwestern and Western Passenger Associations and Canadian Pacific Railway and Soo Line have granted the following rates:

RATES TO SAN FRANCISCO AND LOS ANGELES, CAL.

One lowest normal first-class limited one-way fare for the round-trip for tickets going and returning via regular direct routes, usual diverse routes to apply.

Tickets, destination San Francisco, may also be sold going direct, *returning* via Portland and Shasta Route or O. R. & N. Co. steamer at \$13.50 higher than direct line rates to San Francisco.

Tickets, destination Los Angeles, reading for going passage via Ogden, may also be sold *returning* via Portland and Shasta Route or O. R. & N. Co. Steamer at \$13.50 higher than direct line rates to Los Angeles.

On tickets from Texas and Louisiana and Albuquerque, N. M., one way via Portland, add \$18.50, of which amount, \$5 shall accrue in division to the lines via Huntington or Billings.

No rate shall be made less than \$71.40 for tickets returning through Portland and Saint Paul.

The extra charge for return via Winnipeg and Saint Paul above rate authorized for return through Portland and Saint Paul direct will be \$10.

DATES OF SALE.

From points east of but not including Colorado common points (Cheyenne to Trinidad inclusive), and east of El Paso and Dalhart, October 8 to 17, 1908, inclusive.

From Colorado common points (Cheyenne to Trinidad, inclusive), and west thereof, and from El Paso, Dalhart and west thereof, October 9 to 18, 1908, inclusive.

The final return limit, November 8, 1908.

TRANSIT LIMITS.

Going—Going transit limit to be November 25, 1908, going passage to begin on date of sale to be continuous up to first Colorado, Wyoming or Texas point en route; west thereof and east of California, stop-overs may be made at any point within thirty days from date of sale; within California, stop-overs may be made at any point up to November 25, 1908.

Returning—Return passage to begin on date of execution. Joint agent at destination will execute tickets by attaching validation certificates thereto. Return journey from destination must be commenced on date stamped and punched on validation certificate. Joint agent at destination will punch return transit limit same as usual limit for one-way limited ticket. Stop-overs will be allowed within final limit, November 30, 1908, at and west of Colorado common points (Cheyenne to Trinidad, inclusive), Fort Worth, San Antonio, Dalhart, and points west of Saint Paul, Minneapolis, Duluth, Fort William and Alliance, Neb.

To secure such stop-over, in case of return over direct lines or through Portland and Huntington tickets must be deposited with agent at point of stop-over immediately upon arrival, except that it will be unnecessary to deposit ticket if passenger can reach final destination within transit limit punched by Joint Agent at San Francisco or Los Angeles, as the case may be, or if stop-over is desired at Portland. If passenger desires to stop over so that the transit limit punched by Joint Agent at San Francisco or Los Angeles will not admit of his reaching starting point within such limit, when passenger is ready to resume journey the agent having ticket on deposit will attach paster making transit limit from such point to final destination the usual one way limit.

When tickets read returning via Portland thence via Northern Pacific, Great Northern, or Canadian Pacific Railways, Joint Agent at San Francisco or Los Angeles, as the case may be, will punch final limit November 30, 1908. When stop-over is had on those lines, it will be unnecessary to deposit ticket with agent at point of stop-over.

East of Fort Worth, San Antonio, Dalhart, and Colorado common points (Cheyenne to Trinidad inclusive), Saint Paul, Minneapolis, Duluth, Fort William, and Alliance, Neb., tickets to be good only for continuous passage.

When stop-over is desired at Ogden, Salt Lake City, Pueblo, Colorado Springs, or Denver and the usual one way limit will not suffice for passengers to reach starting point, tickets must be deposited with, and an extension paster issued by joint agents at those points, as follows:

* Colorado Springs, Col., N. Underhill, cor. Cascade and Pike's Peak Aves., 7.30 A.M. to 10 P.M. daily.

* Denver, Col., N. Underhill, Room 53, Union Depot, 7.30 A.M. to 10.30 P.M., daily.

Ogden, Utah, C. A. Henry, Union Depot, 7 A.M. to 7 P.M. daily, also 30 minutes before departure of all night trains.

* Pueblo, Col., N. Underhill, Union Depot, open all day and night.

Salt Lake City, C. H. Griffin, Room 2, Central Block, 46½ West Second Street, 7.30 A.M. to 8.30 P.M., daily.

Tickets will be sold from San Francisco and Los Angeles, from October 11th to November 25th, at one regular first-class fare and one-third for round trip, minimum 50 cents, to all points in California, to holders of tickets from points beyond Ogden, El Paso, Portland, Albuquerque, sold at reduced rates account Bankers' Convention. Also to holders of nine months' round trip tickets, and friends accompanying; limit 30 days, but not later than November 25th; stop-overs within limit. Tickets will be sold to Yosemite Valley, including rail-stage transportation and hotels beyond Raymond, from San Francisco; four days' trip \$48.50; five days, \$50; nine days, \$60; fourteen days, \$70. From Barends, four days' trip, \$40.00; five days, \$42.10; nine days, \$52.10; fourteen days, \$62.10.

* Joint Agencies in Colorado Springs, Denver and Pueblo remain open until Oct. 31, 1908, only. After that date, tickets must be deposited with agent of Terminal Lines at Colorado Springs, Denver, or Pueblo, over which they read. Joint Agencies in Ogden and Salt Lake City remain open the year round and all tickets on which stop-overs are had at those points must be deposited with the Joint Agencies.

THE NATIONAL BANK OF COMMERCE IN NEW YORK.

The merger of the Western National Bank of the United States with the National Bank of Commerce in New York, which became effective on October 5, adds another to the number of very large and strong banks of the country. In point of size, measured by capital and deposits, the National Bank of Commerce ranks with the two or three largest banks on the Western Hemisphere. Its capital is \$25,000,000, the surplus \$10,000,000, and the deposits of the combined banks at the outset will be about \$120,000,000. Judging from the history of previous banking consolidations it may be expected that the momentum gained by the merger will soon carry the deposits far above these figures.

The National Bank of Commerce has a unique and interesting history. It was organized January 1, 1839, under the Free Banking Act passed by the New York Legislature in 1838, and commenced business April 3, 1839. In 1865 it became a National institution, and a special act was passed to induce it to enter the National banking system. This act exempted the shareholders of the bank from what is known as the double liability provision of the National Banking Act, and was extended to the National Bank of Commerce on account of its large capital and surplus, and for the further reason that it was recognized at the time that the National banking system would be greatly strengthened by the entrance of a bank as strong and powerful as the National Bank of Commerce.

Mr. Valentine P. Snyder, who becomes President of the National Bank of Commerce, has had a remarkably successful banking career. Under his management the Western National Bank became one of the largest and most prosperous banks in the city. It absorbed the National Bank of the United States a short time ago, and the merger of the Western National Bank of the United States and the National Bank of Commerce has been made possible largely by Mr. Snyder's energy and financial foresight.

The officers and directors of the National Bank of Commerce in New York are :

Officers : President, Valentine P. Snyder ; Vice-Presidents, J. Pierpont Morgan ; R. A. McCurdy, President of the Mutual Life Insurance Co. ; James H. Hyde, Vice-President of the Equitable Life Assurance Society ; Thomas F. Ryan, Vice-President Morton Trust Co., and Henry A. Smith ; Cashier, W. C. Duvall ; Assistant Cashiers, C. L. Robinson, Neilson Olcott, J. S. Alexander, Oliver I. Pilat, H. B. Fonda, E. A. Montell, Jr., and Clarence Foote.

Directors : James W. Alexander, George F. Baker, Charles T. Barney, E. J. Berwind, C. Ledyard Blair, John Claflin, Frederic Cromwell, H. C. Deming, Chauncey M. Depew, John F. Dryden, James B. Duke, George J. Gould, Daniel Guggenheim, G. G. Haven, Jos. C. Hendrix, Thos. H. Hubbard, James H. Hyde, Adrian Iselin, Jr., Brayton Ives, James N. Jarvie, A. D. Juilliard, Otto H. Kahn, John S. Kennedy, Luther Kountze, Daniel S. Lamont, Woodbury Langdon, Charles Lanier, Richard A. McCurdy, William H. McIntyre, A. W. Mellon, David H. Moffat, J. Pierpont Morgan, Levi P. Morton, Walter G. Oakman, F. P. Olcott, Alexander E. Orr, James H. Parker, Chas. A. Peabody, Elihu Root, Charles H. Russell, Thomas F. Ryan, Jacob H. Schiff, Valentine P. Snyder, Frederick Sturges, H. McK. Twombly, H. H. Vreeland, William C. Whitney, George W. Young.

VALENTINE P. SNYDER,
PRESIDENT NATIONAL BANK OF COMMERCE IN NEW YORK.

BANKING AND FINANCIAL NEWS.

This department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—The Bankers' Trust Company, which has been located at 143 Liberty street, has removed into commodious and handsomely-appointed offices at No. 7 Wall street, in the heart of the financial district of the city.

—Messrs. George D. Cook & Co. recently announced that the coupons of the United States of Mexico five per cent. silver bonds were paid October 1 at the New York Security and Trust Company at the exchange rate of $223\frac{1}{4}$ or about $44\frac{1}{2}$ for Mexican dollars. This is the highest rate the coupons have received since they have been payable in New York city.

—A branch of the Mechanics and Traders' Bank, to be known as the Long Acre Square Branch, has been opened at Thirty-sixth street and Broadway, with Richard A. Purdy as Manager.

—A compilation of the banking laws of the State of New York relating to Savings banks has just been issued by the Bowery Savings Bank, the work having been done by Henry A. Schenck, Comptroller of the bank. The pamphlet contains the Savings Bank Law of 1892 and the amendments enacted since that date.

—Geo. M. Cumming, formerly first vice-president of the Erie Railroad, was elected Vice-President of the United States Mortgage and Trust Co. October 1.

—At a meeting of the board of directors of the International Banking Corporation, October 2, James S. Fearon, agent of the corporation at Shanghai since the establishment of that branch, in 1901, was unanimously elected a director and Vice-President. Mr. Fearon lived in China nearly thirty-four years as the senior partner of the old-established house of Fearon, Daniel & Co. He was the delegate of the United States on the Commission of Bankers appointed under the Peking protocol and having to do with the method of payment of the periodical installments of the Chinese indemnity.

—The merger of the Western National Bank of the United States with the National Bank of Commerce became effective October 5. Valentine P. Snyder, formerly President of the Western National Bank of the United States, succeeds Joseph C. Hendrix as President of the National Bank of Commerce. The Vice-Presidents of the bank are: President R. A. McCurdy of the Mutual Life Insurance Co., Vice-President James H. Hyde, of the Equitable Life Assurance Society, J. Pierpont Morgan, Thomas F. Ryan and Henry A. Smith.

—The Corn Exchange Bank, which has heretofore maintained its Harlem Branch at 153 West 125th street, has leased the property at 101 West 125th street for a term of five years.

NEW ENGLAND STATES.

Boston.—It was announced on September 29 that the Second National Bank had absorbed the business of the National Suffolk Bank. The capital of the enlarged institution will be \$2,100,000. Thomas P. Beal will continue to be President of the Second National Bank, and Wm. C. Williams, Cashier of the National Suffolk Bank, will be Cashier. Six directors from the Suffolk have been added to the board of the Second National.

—At the annual election of the Boston Stock Exchange September 28 the following officers were elected; President, Charles C. Jackson; Vice-President, Henry L. Higginson; Treasurer, Sidney Chase; Governing Committee for two years, Hazen Clement, Henry W. Dodds, Manning Emery, William A. Paine, John Parkinson, and Charles W. Tewksbury.

MIDDLE STATES.

Philadelphia.—On September 19 the Philadelphia National Bank celebrated its one-hundredth anniversary. The bank was chartered by the Pennsylvania Legislature in March, 1804, and opened for business September 19, 1803. George Clymer, one of the signers of the Declaration of Independence, was the first President. The other Presidents have been David Lenox, John Read, Samuel F. Smith, Thomas Robins, Benjamin B. Comegys and N. Parker Shortridge.

Probably the official best known in connection with the Philadelphia National Bank was Mr. Comegys, who was generally recognized as one of the leading bankers of the United

States, and his long and successful career is indissolubly connected with that of the bank. Mr. Comegys began his service in the bank as a clerk in May, 1848, being rapidly promoted until he was appointed Cashier in 1851, and afterward Vice-President, and then President, which latter office he held until his death in March, 1900.

During the one hundred years of its existence the Philadelphia Bank has paid its stockholders dividends amounting to 936 per cent., aggregating \$14,104,372 in cash.

A unique feature of the bank is its "Clerks' Pension Fund," which is for the benefit of its superannuated employees. It was the first corporation to institute this admirable feature, having begun it in 1854 with a capital investment of \$30,000, the principal fund now being \$120,000, which is held in trust, and kept entirely separate from the assets of the institution.

The bank's business has grown to large proportions, the deposits amounting on September 9 last to \$25,826,798.

The officers of the bank are: N. Parker Shortridge, President; Lincoln Godfrey, First Vice-President; Levi L. Rue, Second Vice-President and Cashier, and Harry J. Keese, Assistant Cashier.

Pittsburg.—The Equitable Trust Company of this city has sold a controlling interest to the Knickerbocker Trust Company of New York at \$190 a share.

SOUTHERN STATES.

Atlanta, Ga.—At the annual meeting of the Atlanta Clearing-House Association September 8, the following officers were chosen: President, Thomas J. Peeples, Cashier of the Maddox-Rucker Banking Co.; Vice-President, W. F. Manry, Cashier Neal Loan and Banking Co.; Treasurer, Thomas C. Erwin, Assistant Cashier Third National Bank; Secretary and General Manager, Darwin G. Jones.

—Frank Orme was recently elected Assistant Cashier of the Maddox-Rucker Bank. He has been in the employ of the bank for thirteen years, and has won promotion by careful attention to the duties of the various positions he has filled. The business of the bank has greatly increased in the past few years, making the appointment of an Assistant Cashier a necessity.

Norfolk, Va.—The merger of the City National Bank with the National Bank of Commerce, which was officially announced on August 29, will add a considerable volume of desirable accounts to the business of the National Bank of Commerce. The merger will not cause any change in the officers or management of the National Bank of Commerce.

WESTERN STATES.

Cleveland, Ohio.—The Reserve Trust Co. has absorbed the Genesee Savings and Banking Co., which had a capital of \$50,000.

Green Bay, Wis.—The capital of the McCartney National Bank was recently increased from \$50,000 to \$100,000 and the surplus to \$50,000.

St. Louis, Mo.—The Mississippi Valley Trust Co. in its official statement of September 9 reported \$27,868,440.01 total resources.

—The problem of clearing country checks is being studied by the St. Louis Credit Men's Association.

Excelsior Springs, Mo.—This popular health resort is to have a National bank. A. M. Moore and others of Holton, Kansas, and Ponca, Oklahoma, are the organizers. Mr. Moore is a son of a prominent banker at Holton, has had considerable experience as a banker, and has very strong connections. Excelsior Springs is regarded as a first-class location for a National bank, and Mr. Moore's success is considered as certain.

Failures, Suspensions and Liquidations.

Arkansas.—The Bank of El Dorado, with \$50,000 capital, closed August 24.

Indiana.—R. Ellison, doing a banking business at La Grange, suspended September 16. He was also owner of the Ellison Bank, of Topeka, Ind., which closed on the same day. It is estimated that the deposits of the two banks are about \$300,000.

Ohio.—The Bank of Willoughby was closed September 10, owing to the failure of a manufacturing company, of whose paper the bank was a large holder.

Massachusetts.—The Packard National Bank, of Greenfield, suspended September 30. It was one of the best-known banks in Western Massachusetts. Large withdrawals of deposits and inability to realize on loans fast enough to meet demands caused the failure.

Pennsylvania.—The Bolivar National Bank, of Bolivar, Pa., organized in 1901 with \$30,000 capital, suspended October 1, with deposit liabilities amounting to \$92,878.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW YORK BANKERS' BANQUET.—A full report of the proceedings of the Convention of the New York State Bankers' Association, held at Saratoga Springs, October 10 and 11, appears elsewhere in this issue of the *MAGAZINE*.

The principal social feature of the convention was a banquet, at which President Stephen M. Griswold presided. Pleasing vocal selections were rendered by the Empire Quartette, of Troy, and a number of speeches were made and many good stories told. Those who spoke were: Adelbert P. Knapp, President of the Village of Saratoga Springs; Herbert L. Bridgeman, editor of the "Brooklyn Standard Union"; R. A. Purdy, of the Mechanics and Traders' Bank, New York; James R. Branch, Secretary American Bankers' Association; Joseph Chapman, Jr., Cashier Northwestern National Bank, Minneapolis; Henry F. Sammis, Vice-President of the Bank of Huntington, and Rev. Dr. Joseph Carey, of Saratoga Springs.

NATIONAL BANK RETURNS—RESERVE CITIES.

By the courtesy of the Comptroller of the Currency at Washington, the **BANKERS' MAGAZINE** has been favored with the complete returns of the National banks in all the reserve cities, at the date of the call on September 9, 1903. These are published below in conjunction with the two preceding statements of April 9, 1903, and June 9, 1903. In this form the figures become much more valuable by reason of the comparison. The complete returns of National banks in the reserve cities are published in the **BANKERS' MAGAZINE** exclusively.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, October 3, 1903.

LOW RECORDS FOR BRITISH CONSOLS AND UNITED STATES STEEL SECURITIES were the financial sensations of the month just closed. In both instances interest was excited both at home and abroad. Consols have been declining for some time past and on September 29 fell to 86½, the lowest prices recorded since 1866. Last year, when \$160,000,000 of new consols were issued, they were placed at 93¼. The low rate of interest these securities yield, 2½ per cent., may have had some influence on the price, for it will be remembered that these securities paid three per cent. prior to 1888 when the rate was reduced to 2¾ per cent. In April last the rate was further reduced to 2½ per cent. Other causes, however, undoubtedly influenced the decline.

While British consols bearing 2½ per cent. were selling at about 87 United States two per cents. were quoted at 109, and the fact naturally attracted comment. The advantage which the latter possess rests upon another foundation than the superior credit of the Government. Out of \$528,000,000 of two per cents. now outstanding, the National banks hold \$488,000,000, or all but about eight per cent., as security for circulation and public deposits. About sixty per cent. of all the bonds issued by our Government is owned by the National banks. With so sure a market it is not surprising that our Government issues should command a high price.

Both in England and here it has been apparent that similar influences have been at work to depress values of securities. There have been tremendous issues of securities in recent years and it has been impossible to maintain a buying movement sufficient to absorb the new securities offered. As the reaction set in there came the necessity of selling marketable securities in order to protect the unmarketable. This operation has been proceeding for some time; whether it is to continue longer, is a question the future must answer.

Month after month during the current year prices of securities have found a new low level. Last month a number of stocks sold at the lowest prices recorded since 1901, although the great majority of stocks are much higher than they were in 1896 and in the main justly so on their merits.

The securities of the United States Steel Corporation were the leaders in the decline during the month. Nearly 900,000 shares of the common stock, 500,000 shares of the preferred stock, and \$16,000,000 of the second mortgage bonds were dealt in at the New York Stock Exchange. The common stock fell to 14¾ on September 29 and the preferred to 58¾ while the bonds touched 67¾ on the day previous. The common stock once sold at fifty-five, in April 1901, and the preferred at 101¾. The bonds sold at 87¾, last June. The bonds pay five per cent. interest, the common stock four per cent. and the preferred stock seven per cent. dividends, and that these securities should sell at so low a price is one of the unsolved mysteries of the present financial situation.

The course of these securities has excited inquiry as to the history of the United States Steel Corporation. Its career has not been a very long one, but at the time it was organized there was such a multiplicity of enormous financial operations that no gigantic feat of consolidation or capitalization seemed to attract any very serious consideration. The corporation was organized in February, 1901, and through the

efforts of a syndicate secured a number of iron and steel plants, absorbing the companies which operated them and issuing a large amount of securities in exchange for their capital stock. The first annual report issued in February, 1902, contained a statement of the stocks and bonds issued in acquiring the properties. From it we have made an abstract showing first the stock and bond capital of the respective properties, and next the securities issued by the United States Steel Corporation. The following table shows the capitalization at the time the plants were purchased :

	<i>Common stock.</i>	<i>Preferred stock.</i>	<i>Bonds.</i>	<i>Total.</i>
Carnegie Company	\$160,000,000	\$159,450,000	\$319,450,000
Federal Steel Co.	46,483,700	\$53,260,200	457,014,500
National Steel Co.	31,970,000	26,996,000	
National Tube Co.	40,000,000	40,000,000	
Am. Steel and Wire Co.	49,981,400	39,999,000	
Am. Tin Plate Co.	28,000,000	18,325,000	
Am. Steel Hoop Co.	19,000,000	14,000,000	91,708,305
Am. Sheet Steel Co.	24,499,600	24,499,600	
Lake Superior Con. Iron Mines..	29,413,905	
Am. Bridge Co.	30,946,400	31,348,000	
Shelby Steel Tube Co.	8,018,200	4,776,100	
Total	\$468,313,205	\$253,203,900	\$159,450,000	\$880,967,105
Syndicate cash, \$25,000,000; expenses, etc., \$3,000,000.....				28,000,000
Total				\$908,967,105

The syndicate which managed the transfer of the properties paid \$25,000,000 to the United States Steel Corporation and expended \$3,000,000 additional in its operations. In return a large amount of securities was turned over to the syndicate. The following table shows the securities issued by the corporation in exchange for the securities above set forth, and to the syndicate for its services and the \$28,000,000 it paid to the corporation and expended :

	<i>Securities received by company.</i>	<i>Securities issued in exchange by company.</i>			
		<i>Common stock.</i>	<i>Preferred stock.</i>	<i>1st mortgage bonds.</i>	<i>Total.</i>
Carnegie Company	\$319,450,000	\$90,279,000	\$98,277,100	\$308,450,000	*\$498,206,100
Seven companies	457,014,500	268,490,000	261,665,700	531,185,700
Lake Superior Con. Iron Mines & Am. Bridge Co.	91,708,305	72,202,500	74,191,500	146,394,000
Shelby Steel Tube Co.	12,794,300	2,004,500	1,791,000	3,795,500
Syndicate	28,000,000	64,968,800	64,968,700	129,937,500
Total.....	\$908,967,105	\$498,974,800	\$500,954,000	\$308,450,000	\$1,304,578,800

* Includes \$1,200,000 cash paid Carnegie Company.

Besides the securities above issued, \$9,250,000 of common stock and \$9,250,000 of preferred stock were issued in purchase of a one-sixth interest in the Oliver Iron Mining Company and in the Pittsburg Steamship Company, the capitalization of which was not stated in the report.

So vast a combination of capital and issue of new securities would probably not be possible at the present time, but two years ago excited little comment. There has been a very remarkable change in two years.

In connection with the United States Steel Corporation there were two important events during the month. The corporation announced that it would protect its employees who had invested in the preferred stock, should they keep their stock until January 1, 1908. Messrs. J. P. Morgan & Co. gave notice to the members of the syndicate which underwrote the new bond issue that the first installment of their cash subscriptions, 25 per cent., would be payable October 1, also that it was proposed to extend the syndicate agreement from October 1, 1903, to July 1, 1904.

In the iron and steel trade the situation has not been wholly favorable. There has been a decrease in the demand and prices have been falling. Labor strikes have checked building operations involving the use of iron and steel, while the railroads have not been able to borrow money to carry on contemplated improvements and extensions.

The Secretary of the Treasury has been employing such means as are at his command to prevent any stringency in money as the result of the usual increased demand to move the crops. The demand has been somewhat delayed this year, and, consequently, September has passed without any disturbance in the money market.

To forestall a not improbable contingency, the Secretary has been increasing the Government deposits in National banks, an increase of about \$9,000,000 having been made last month. On September 23 he gave notice that he would receive \$20,000,000 more of the 3 per cent. bonds of 1908 and the 4 per cent. bonds of 1907 in exchange for the 2 per cents of 1930. About \$1,600,000 were exchanged up to the end of the month. The Secretary also offered to redeem the 5 per cent. bonds due February 1, 1904, of which there were then \$19,385,050 outstanding, and to allow interest to date of maturity. Holders of these bonds have surrendered \$2,000,000 of them for redemption. With these bonds retired, the highest rate of interest which any of the Government bonds will carry will be 4 per cent.

The money market has been in striking contrast to that of a year ago, when the Secretary of the Treasury found it necessary to take radical measures for increasing the money supply. This year call money did not rise above 3 per cent., while in September last year it was almost continuously above 5 per cent., and advanced to 20 per cent. on September 12, to 25 per cent. on the 24th, and to 35 per cent. on the 29th.

The money situation was less favorable abroad, and on September 3 the Bank of England advanced its rate of discount from 3 to 4 per cent. All during the month there was a possibility of a further advance, but the expectation was not realized.

Exceptional anxiety was felt regarding the crops, owing to the lateness of corn. Early in the month the weather conditions were unfavorable, and danger from frost seemed imminent; but there came warmer weather, and at the close of the month a good crop was practically assured.

The wonderful activity in the business of the country and the exceptional prosperity are still manifested in the volume of railroad traffic and in the increase in gross earnings. The compilation by the "Financial Chronicle" of the gross earnings of railroads representing nearly 174,000 miles, or nearly ninety per cent of the total, for the first six months of 1903 shows a total of \$847,000,000, compared with \$745,000,000 in 1902. This is an increase of \$102,000,000, or 13.68 per cent. This follows continuous increases for ten years past. It is estimated that the earnings in the first half of 1902 of all the railroads in the country were \$435,000,000 larger than for the same period in 1897. Since June 30 the improvement in earnings has continued, those in August having increased about ten per cent.

Whatever satisfaction is to be found in this exhibit of railroad prosperity must be moderated to some extent by the less favorable showing which net earnings are making. The annual reports of the railroads for the fiscal year ended June 30 are now coming forward, and most of them so far received make it plain that the increase in expenses is preventing an increase in net earnings in proportion to the increase in gross earnings.

We have tabled the earnings of a number of railroads for the year 1902 and 1903 for the purpose of comparing the gross and net. The railroads represent nearly all sections of the country and all classes of traffic. The results of their operations in the two years are shown as follows:

	Gross earnings.		Net earnings.	
	1902.	1903.	1902.	1903.
Chicago Great Western	\$7,549,689	\$7,823,190	\$2,060,280	\$2,184,664

Reading Railway.....	26,515,534	32,429,791	10,745,536	11,636,528
Illinois Central.....	40,821,030	45,186,077	12,806,680	13,468,121
Great Northern.....	36,032,255	40,765,647	17,006,397	19,234,682

Twenty-six railroads are enumerated above whose gross earnings last year aggregated about \$685,000,000, an increase over the previous year of \$60,000,000. Their net earnings were about \$230,000,000, an increase of only about \$11,000,000. That is, while the gross earnings increased about ten per cent. the net earnings show a gain of only about five per cent.

In our foreign trade returns also there is evidence of a change in the situation which deserves attention. The exports of merchandise in August were less than \$90,000,000 in value. August is not a month usually of large exports, but this total is the smallest for any August since 1898. On the other hand, imports have largely increased, exceeding \$92,000,000 in August and showing an increase over August, 1898, of \$32,000,000. The excess of exports over imports was only \$7,549,190, the smallest reported in any month in over six years. How the trade balances have fallen off not only in August, but for several months past, may be seen in the following comparison for the last four years.

NET EXPORTS OF MERCHANDISE.

	1900.	1901.	1902.	1903.
January.....	\$41,700,046	\$37,018,521	\$50,006,988	\$48,817,483
February.....	50,598,041	48,455,315	33,219,236	42,963,778
March.....	47,684,769	48,596,899	22,522,519	35,861,507
April.....	43,262,318	44,066,059	33,847,605	22,145,109
May.....	41,774,324	45,325,208	26,632,444	21,894,454
June.....	47,650,590	34,369,606	16,125,429	13,196,980
July.....	36,793,115	36,370,075	9,642,753	9,648,811
August.....	41,755,477	34,896,962	16,019,029	7,549,190
Eight months.....	\$351,163,683	\$359,678,585	\$207,515,908	\$202,119,188

During the four months ended August 31 the net exports were only \$52,000,000, as compared with \$68,000,000 in 1902, \$151,000,000 in 1901 and \$168,000,000 in 1900. August exports were reduced this year by the smaller movement in breadstuffs and cotton. The value of breadstuffs exported was \$13,000,000, as compared with

\$19,000,000 in 1902 and \$29,000,000 in 1901, and of cotton \$2,000,000, as compared with \$6,000,000 in 1902 and \$7,000,000 in 1901.

One of the events of the month was a successful corner in cotton, which carried the price of September cotton to 18.20 cents on September 29. The late movement of the crop contributed to the success of the corner. The secretary of the New Orleans Cotton Exchange, Col. Henry G. Hester, estimates the 1903 crop at 10,727,559 bales, valued at \$480,770,282. This compares with 10,680,680 bales valued at \$438,014,687 in 1902, and with 10,883,422 bales valued at \$494,567,549 in 1901. The consumption of cotton by Southern mills has increased at a remarkable rate. During the year, ended August 31 it aggregated 2,000,729 bales. In 1897 it was only 1,042,671. In six years the Southern mills have nearly doubled their takings.

Commercial failures, as reported by R. G. Dun & Co., numbered 8,176 during the first nine months of 1903, as compared with 8,676 in the corresponding period in 1902, a decrease of 500. The liabilities, however, show an increase aggregating \$101,655,855 against \$85,407,490 in 1902. There were sixty-six failures among banks and other fiduciary institutions, with \$8,721,611 liabilities, compared with forty-seven in 1902, with liabilities of \$28,027,198.

THE MONEY MARKET.—Rates for money have ruled at moderate figures throughout the month, the usual demand for money from interior points having been delayed. Call money did not get above three per cent., but time money was firm at $5\frac{1}{2}$ @ 6 per cent. At the close of the month call money ruled at $2\frac{1}{4}$ @ 3 per cent., the average rate being $2\frac{3}{4}$ per cent. Banks and trust companies loaned at $2\frac{1}{2}$ per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at $5\frac{1}{2}$ per cent. for 60 to 90 days, and 6 per cent. for 3 to 6 months on good mixed collateral. For commercial paper the rates are 6 per cent. for 60 to 90 days' endorsed bills receivable, 6 @ $6\frac{1}{2}$ per cent. for first class 4 to 6 months' single names, and $6\frac{1}{2}$ @ 7 per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—The clearing-house banks of New York suffered a continuous decline in deposits during the month, resulting in a decrease of nearly \$23,000,000 since the last of August. They are, however, \$21,000,000 larger than they were a year ago, while the decrease in September last year was in excess of \$40,000,000. Loans, after increasing \$23,000,000 early in September, have been reduced \$13,000,000 in the last three weeks, but they are \$40,000,000 more than at this time in 1902. The reserves are much stronger than they were a year ago, the surplus now being nearly \$14,000,000 as compared with less than \$2,000,000 in 1902. The banks hold \$16,000,000 more specie and \$3,000,000 more legal tenders than at this time last year. There was an increase of nearly \$2,000,000 in circulation during the month, making an increase of \$10,000,000 since October 1, 1902.

MONEY RATES ABROAD.—Rates for money were generally higher at European centers. The Bank of England advanced its rate of discount from 3 to 4 per cent. on September 3, and a further advance was expected later in the month, but the 4 per cent. rate was maintained. Discounts of 60 to 90 day bills in London at the close of the month were 4 per cent. against 2½ @ 3½ per cent. a month ago. The open market rate at Paris was 2¾ per cent. against 2½ @ 2½ per cent. a month ago, and at Berlin and Frankfurt 8½ per cent. against 3½ a month ago.

NATIONAL BANK CIRCULATION.—There was an increase in the amount of National bank notes outstanding last month of \$1,838,560 but the circulation based on Government bonds was reduced \$500,000, while that based on deposits of lawful money increased \$2,400,000. The Government bonds deposited to secure circulation were reduced \$3,000. There was a reduction in the 4's of 1907 and the 2 per cents. of 1900 and an increase in other issues. The bonds deposited to secure public deposits increased \$11,600,000, nearly \$5,000,000 being in 2 per cents., \$2,000,000 in State and city bonds, and \$3,000,000 in Philippine certificates.

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, \$4,873,900; 5 per cents. of 1894, \$4,347,450; 4 per cents. of 1895, \$11,422,550; 3 per cents. of 1898, \$3,032,530; 2 per cents. of 1900, \$109,720,400; District of Columbia 3.65's, 1924, \$1,694,000; State and city bonds, \$18,374,052; Philippine Island certificates, \$5,800,000, a total of \$164,214,872.

GOVERNMENT REVENUES AND DISBURSEMENTS.—The receipts of the Government in September were in excess of the disbursements by more than \$6,500,000, which makes a surplus for the first quarter of the fiscal year of nearly \$5,600,000. In September last year there was a surplus of \$11,000,000 and in the first quarter of \$9,000,000. The month's receipts were \$3,600,000 less than a year ago of which decrease \$2,600,000 was in customs and only \$600,000 in internal revenues. Expenditures show an increase compared with last year of about \$900,000, although interest payments were nearly \$3,000,000 smaller. The principal increase in disbursements was for war and pensions.

UNITED STATES PUBLIC DEBT.—The public debt statement for September shows that \$1,600,000 of the 3 per cents. of 1898 and 4 per cents. of 1907 have been exchanged for 2 per cents., and \$2,000,000 of the 5 per cents. of 1904 have been redeemed under the offer of the Secretary of the Treasury in his circular of September 23. The bonded debt is thus reduced \$2,000,000 and is now only about \$912,500,000. The National bank redemption fund was increased \$1,800,000 and gold and silver certificates \$6,000,000, making the aggregate debt show an increase of about \$5,700,000. The net cash in the Treasury increased about \$6,000,000 and the net debt, less cash in the Treasury, was reduced more than \$6,000,000. Since January 1 the net debt has been reduced more than \$29,000,000.

UNITED STATES FOREIGN TRADE.—Only three times in the last five years have the exports of merchandise been as small in any one month as they were in August this year. The total value was \$39,585,440. In June, 1902, they were \$39,240,488; in July, 1902, \$38,790,627, and in August, 1898, \$34,565,561. With these exceptions, the record this year is the lowest in five years. August is not usually a month of large exports, but in August last year they were \$5,000,000 more than this year, and in 1901 \$18,000,000 more. Imports of merchandise make a very different showing. They were valued at \$32,036,250, the largest reported for that month in any year. They were \$3,000,000 more than in 1902, and \$32,000,000 more than in August, 1898. The net exports of merchandise during the month were only \$7,549,190 as against over \$16,000,000 in 1902, nearly \$35,000,000 in 1901, and \$42,000,000 in

1900. As we imported, net, \$7,724,031 gold and \$299,421 silver, there is a balance of net imports of merchandise and specie of nearly \$500,000. It is a long time since such a balance has been shown in any month.

MONEY IN CIRCULATION IN THE UNITED STATES.—There was an increase of nearly \$16,000,000 in the amount of money in circulation last month, \$2,000,000 in gold coin, \$3,000,000 in silver dollars, \$2,000,000 in subsidiary silver, \$2,600,000 in silver certificates, \$1,000,000 in United States notes, and \$5,500,000 in National bank notes. The per capita circulation is now \$29.75, as compared with \$29.43 on January 1.

BANKERS' OBITUARY RECORD.

Boreing.—Hon. Vincent Boreing, President of the First National Bank, London, Ky., died September 16, aged sixty-four years. He was a native of Tennessee, but moved to Kentucky when a boy. He served in the Civil War and was commissioned a first lieutenant on account of meritorious conduct. He was elected a county judge in 1886, and was serving his third term as a member of Congress when he died. He also served as department commander of the G. A. R. of Kentucky.

Carlisle.—David Carlisle, President of the Passaic (N. J.) National Bank, died September 10, aged fifty-nine years. From 1861 to 1869 he was engaged in a bank at Belfast, coming to America in the latter year. In 1873 he located at Passaic.

Clark.—D. L. Clark, a private banker doing business at Newton, Iowa, died September 21, aged eighty-one years.

Dye.—Mason M. Dye, Cashier of the banking firm of Dye Bros., of which he was also a member, died September 18.

Eldred.—Nelson Eldred, President of the City Bank, Battle Creek, Mich., died September 9.

Ferris.—A. F. Ferris, President of the First National Bank, Brainerd, Minn., died September 7. He had several times served as a member of the lower house of the Minnesota Legislature, and was a member of the State Senate at the time of his death.

Gillespie.—Arthur D. Gillespie, Cashier of the People's Savings Bank, Spencer, Iowa, died September 19, aged thirty years. He was associated with the Clay County Bank, at Spencer, until its consolidation with the First National Bank, at which time he became Cashier of the People's Bank, and continued to hold that position until his death.

Grist.—John R. Grist, Vice-President of the Second National Bank, Youngstown, Ohio, died September 16. He was born in Fayette county, Ohio, in 1824. In 1849 he went to California, but returned to Ohio and successfully engaged in stone-quarrying and manufacturing.

Hodgson.—Edward J. Hodgson, President of the Security Trust Co., St. Paul, Minn., died September 21. He was born on the Isle of Man, sixty-two years ago, removing in his youth to Illinois. Subsequently he located in Minnesota.

Jenkins.—Wm. L. Jenkins, who was President of the Bank of America, New York city, until 1888, died September 26, aged ninety-seven years. Mr. Jenkins was born in New York in 1806, and was descended from an old Quaker family. At the age of twenty-two he entered the commission house of Thomas W. Jenkins & Co., remaining in their employ for eleven years. In 1839 he formed the firm of Merrill & Jenkins, dry goods jobbers. This partnership was dissolved in 1845, and the following year Mr. Jenkins entered the Bank of America as a clerk. In 1858 he was made Cashier. In 1870 he was elected President of the bank. In 1886 he resigned the presidency, but he was a Vice-President for two years more.

Kirk.—Jesse A. Kirk, Vice-President of the National Bank of Rising Sun, Md., died September 20, in his eighty-second year. In 1848 he was appointed postmaster at Rising Sun, and in 1864 was elected to the Legislature. In 1866 and also in 1867 he was appointed school commissioner.

Mitchell.—Austin R. Mitchell, President of the West Newton (Mass.) Savings Bank from its establishment until 1902, and Vice-President of the First National Bank from its incorporation, died September 25. He was born at Cummington, Mass., in 1828.

Parmlee.—Col. James G. Parmlee, Vice-President of the Citizens' National Bank, Warren, Pa., died September 8. He was a veteran of the Civil War and had held a number of important local offices.

Radder.—E. W. Radder, Secretary and Treasurer of the Central Trust Co., Cleveland, Ohio, died August 25.

Reynolds.—Horatio N. Reynolds, who was for forty-five years President of the Wickford (R. I.) Savings Bank, died recently.

Stoddard.—Col. E. B. Stoddard, former mayor of Worcester, Mass., and President of the Quinsigamond National Bank and the Worcester Five Cents Savings Bank, died September 25 at Alfred, Me. In addition to his prominent connection with banking, he held numerous other important business and official positions. He had been a director of the Quinsigamond National Bank for more than half a century, and President of the bank for a number of years.

THE BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SEVENTH YEAR.

NOVEMBER, 1903.

VOLUME LXVII, No. 5.

THE PRESENT MEETING OF CONGRESS, is likely to prove of greater importance than now appears. Forecasts of what Congress will do as to this or that question are notoriously unreliable, but the questions likely to be discussed are vital to the welfare of the country, and the debates may take a course from which great popular excitement may be evolved.

The approach of the Presidential year will cause a desire to bend every issue for the political advantage of the two opposing parties. The tariff question, in which the relations of trade between this country and Cuba are involved, is the chief point at issue. Cuba in the leading-strings of the United States is dependent on the action of Congress for the direction of her future course. In her present situation she has found it impossible to raise the money to settle the bills of her soldiers who struggled for her independence. A settlement of the relations between the United States and Cuba seems almost impossible without annexation, and before any settlement is accomplished it is highly probable that the relations of the Government with all its outlying territory will have to be thoroughly discussed.

The labor and trust questions will also no doubt occupy some of the time of Congress, although the times do not yet seem to be ripe for any satisfactory settlement. The Panama canal treaty, of minor importance in reality, is yet one that may consume more time than it is worth.

The finances of the Government are in good condition. The Treasury was never before so strong. The revenues are in excess of the expenditures, and the debt is decreasing.

There is really nothing that seems likely to impress Congress with the necessity of any financial measure, except perhaps some modification of the laws relating to the use of National banks as public depositories. It is not believed that there will be any action looking to

any radical change in the present method of issuing currency by the banks. In fact, it would be unwise to take such action at present even if the discussions likely to arise in regard to Cuba and the Philippines and other matters mentioned did not occupy all the time there is to spare.

It is doubtless the desire of the Administration that Congress shall avoid branching out into discussions that will furnish political capital to its opponents. It may, however, be impossible to avoid some investigation of scandals which have arisen in some branches of the Administration.

THE MOVEMENT OF GOLD to and from this country is always a subject of interest to financiers. When the currency of the country was continually increasing from the coinage of silver dollars and the issue of silver certificates and also from the issue of Treasury notes for silver purchases, gold exportations were rightly looked upon as manifestations of the workings of the Gresham law. The paper money based on depreciated silver displaced gold, as the volume became greater than the requirements of business. Since further additions to the stock of silver coined and uncoined have been stopped by law, the aggregate volume of paper currency in any way based on credit has been fixed, except as to National bank notes. The bank notes are subject to some fluctuation with the movement of bond premiums up and down, but this fluctuation is not great and is further controlled by the provision of law limiting retirement of bank notes in any one month to \$3,000,000. National bank notes tend to contraction. Periodically, when new issues of bonds have been made by the Government, or when Congress increases the limit of issue in proportion to the bonds, considerable increases in National bank notes have taken place. But when these artificial impulses have exerted their force a gradual contraction is sure to begin and continue until the bonds are withdrawn down to the minimum that the banks are forced to keep to retain their organization.

The amount of money required to do business in so large a territory as the United States is subject to great fluctuations, and the only money that can surely be depended on to meet these fluctuations is gold. It is plain since the volume of Government notes and bank notes has become fixed, that the stock of gold has increased. The country loses little by exportation. All through the last summer money rates in the eastern money markets have been well sustained; there has been no piling up of reserves.

This condition of things has been ascribed with some truth to the unusual prosperity of the country, and also to the great demand for

speculative purpose. These are not the only causes, however. The country has grown, and while there has been an increasing demand for currency, the source of supply depended on in former years, viz., silver certificates, has been cut off. The banks which formerly at those seasons when business was inactive sent their surplus cash to swell the reserves of the eastern banks, have had no surplus to send. It has been noticed that the interior banks have held larger reserves and the claim has been made that these larger reserves were carried so as to render the banks more independent of the aid of the money centers, as if there had been some change of policy, and the money centers were beginning to lose their grip. But this does not seem to be the exact truth. The western banks, if they had more cash than they needed, would do with it as they have always done, send it to the East. If the volume of paper currency had been increasing as it was while the silver purchases were progressing, there would have been no lack of surplus cash to send to the money centers.

After the repeal of the silver-purchase law, there was until the last year or two a redundancy of currency. This redundance was the result of the great accumulation of silver from 1878 to 1893. The business of the country increased from 1896 to 1900 so as to virtually absorb the supply. Another addition was made in 1900 by the law permitting National banks to receive notes equal to 100 per cent. of bonds deposited. The great prosperity and business enterprise did not find this any too much. The present year, while prosperity still continued, the National bank note supply began to retrograde. The result has been apparently that for the first time in many years the supply of money has not exceeded the continuous wants of business. The higher range of prices has also, doubtless, made a larger demand for cash resources.

It is remarkable that there has not been a demand for larger issues of some kind, as was often the case with larger proportionate supplies of cash, unequally distributed. The confidence in the present currency of the country, based on the adoption of the gold standard, is an aid to its wider and more equable distribution. When silver certificates and Treasury notes were increasing from week to week, the interior banks sought to lessen the risk by exchanging them with the banks in the money centers for accounts which stood a better chance of being paid in gold. Since the risk has been reduced the interior banks hold larger reserves than they would otherwise with the same amount of business.

The only form of money with which defective reserves are now likely to be reinforced is gold. This gold comes either from the mines or it must be imported from abroad. The natural basis of gold importations is the trade balance of the country. If this is favorable, as is now be-

lieved, gold will be imported; but even if it is unfavorable, gold will be imported even if it has to be borrowed. But whether it comes in payment for products and manufactures or is borrowed on the strength of future products and manufactures, makes a vast difference to those who seek to ascertain the real business outlook.

The fact that gold can be borrowed on private security shows an advance in condition over the time when gold to replenish reserves could only be obtained on Government bonds. The year 1903, now drawing to a close, will not from present developments and indications be as fortunate as the early expectations indicated. But the year would probably have witnessed still less fortunate conditions if the currency of the country had been as inflated and discredited as it was ten years since. The speculative failures in midsummer would have spread disaster throughout the whole business community had there not been a feeling of unshakable confidence in the currency. Whatever might be the matter with undigested securities, there was no loss or danger to be anticipated from the money in which the titles to property of every form were to be paid.

There may be signs that the quantity of paper currency outstanding is now all in active demand, and that new supplies could be absorbed, but it is better to obtain these new supplies when absolutely needed in gold going into circulation in the form of gold certificates. The gold certificates are in fact now the only form of money that shows any important increase from month to month. Gold in this form becomes an important index of the relation between the totality of business demand and the stock of money in circulation. When these certificates begin to diminish in volume it will be time to say that the business demand is decreasing.

THE BANK MONEY ORDER in competition with the express and postal money orders was the subject of an interesting address by JOSEPH CHAPMAN, Cashier of the Northwestern National Bank, of Minneapolis, Minn., at the last annual convention of the New York State Bankers' Association. Here is a field which the banks might enter with great profit to themselves. In fact, they perform already a portion of the service to the general public which causes the postal and express money orders to be so desirable a means of remitting money. The banks are constantly called upon to cash these orders, and they do so generally for their customers without making any charge, thus adding to the efficiency of their competitors, the express companies and the Government.

The source of profit to both the Government and the express company is not only the charge made for the orders, but some gain is ef-

fects by the failure to present many orders for payment, and in the case of the express company at least from the large sums which are left for more or less time in its hands and on which interest may be obtained when deposited with banks. Everything seems to point to the conclusion that the banks, if they could get this business, could afford to do it more cheaply than the express companies and perhaps than the post office, although the Government would probably continue to compete even at a loss to itself. If the banks, however, could put in operation (and this seems to be in their power) a cheaper and above all a more convenient way of remitting the people's money in small sums, there is no doubt that they would after a time absorb the bulk of the business.

For those who have bank accounts the banks now afford the easiest and most convenient method of making remittance, viz., by personal check. No one who has a bank account would for the purpose of paying bills ever go to the trouble of obtaining an express or post office money order. The use of these personal checks for this purpose has assumed great proportions. But the number of those who keep bank accounts is small compared with those who do not, and it is from the latter that the post office and the express companies draw their business.

The difficulty that confronts the banks in competing is the fact that each bank is an independent unit, not necessarily connected with any other, and that there would have to be a general understanding among the banks as to willingness to pay the orders drawn by each other and a common place of final payment. In respect to its money orders the express company is like a bank with branches, and it is much the same with the post office.

As suggested by Mr. CHAPMAN, it seems probable that the greatest difficulty is that of making the general public acquainted with the fact, and it is a fact, that they can be more cheaply and conveniently accommodated by a bank than by either the express companies or the post office. The fact that banks are willing to undertake this business needs to be advertised, however, and impressed on the minds of the people and also that they will do it more cheaply than their present competitors. Such advertising would pay, not only in securing this remittance business, but it would have a secondary effect in inducing many of those who come to the banks to make remittances to open bank accounts, and to realize the further convenience they would enjoy in dealing with banks.

The value of small accounts seems to have been too little appreciated by the banks generally, although our banks afford greater facilities for such accounts than those of most other countries.

This subject is one well worth studying by bankers generally. As Mr. CHAPMAN says, and as has been heretofore remarked in this MAGAZINE, there seems to be little to be gained by trying to secure laws to tax the express companies out of business. It is evident that at present their success lies in the fact that they furnish facilities which the banks could furnish at cheaper rates, but which the banks so far have neglected to furnish. Banking has been generally so prosperous that bankers, like the law, have not cared for small things. As competition increases and they look around more, they find some sources of profit which they have heretofore despised gathered up by others. But it is not too late to remedy this neglect, although it will cost more than if the matter had been taken up sooner.

IF NATIONAL BANK NOTES WERE AVAILABLE FOR RESERVE, would the banks hold any larger reserves than they do now, or would their capacity for accommodating the business public be increased? The machinery of a modern bank affords to the general public a method of transferring and exchanging almost all kinds of property with the use of a minimum of that form of money, which may be styled currency, viz., coin and certificates for coin, bank and Government notes. This currency may pass current until it is worn out. The banks effect the bulk of the transfers by means of their loans and deposit accounts. The holder of any form of property which the banks will take as security obtains a loan upon it, the proceeds of which come to him in the form of a deposit account. Armed with this account the depositor is able to issue temporary currency in the form of checks and drafts, which by means of other banking machinery are paid and liquidated.

The banks are limited in the increase of their loans and deposit accounts by the requirement of holding a cash reserve. It is an old conservative banking notion that even if not used every day a reserve of cash should be always kept on hand. Even conservative bankers would differ as to the amount of such reserve, measured as a percentage of deposits that should be kept; but to prevent the inconveniences of this disagreement, the National Banking Law fixes this percentage for the different classes of banks. The banks of the central reserve cities are required to keep twenty-five per cent. of deposits all in cash (coin and certificates or legal tenders) on hand. Banks of reserve cities (class 2) must keep $12\frac{1}{2}$ per cent. of deposits in legal-tender cash on hand and may keep $12\frac{1}{2}$ per cent. in cash with a reserve agent. Other National banks are required to keep on hand six per cent of deposits, nine per cent. with a reserve agent. It is not necessary to specify further as to these reserves of National banks, as their

amount and the conditions under which they are held are well understood.

When a bank's deposits subject to reserve are over four times the reserve held in case of banks in reserve cities, these banks must stop granting loans until the reserves are again up to the required limit. In case of other banks outside of reserve cities, loans must stop when their total reserve, in bank or out, becomes less than fifteen per cent. of deposits.

The amount of the reserve, in the case of National banks at least, determines the activity or rest of the banking machinery. This reserve cash must be either legal tender, that is coin or legal-tender notes, or gold and silver certificates; National bank notes are not available for this purpose.

Sound reasons may be advanced why National bank notes could not be used with as much safety as part or the whole of a reserve fund as the forms of money now available for this purpose, and furthermore it is not believed that the power to use National bank notes as reserves in addition to the present legal tender and other money would have any tendency to increase the reserves held or prevent these reserves from falling less frequently below the legal limit.

The banks, from the cash coming into their hands, sort out reserve from other cash, and use the latter first to meet payments. The only effect in most cases of putting National bank notes on the same footing as legal-tender notes and coin and certificates would be to relieve the banks of the necessity of sorting their cash and render them more indifferent as to the money first paid out. The amount held as reserve would be no greater than it is now.

About the only incentive that now exists for the redemption of National bank notes is that legal-tender notes may be obtained to strengthen the reserves. The banks in the eastern money centers hold very few National bank notes in proportion to other cash when reserves run low, because they send them for redemption in legals as soon as they can do so. Those they have on hand would cut no figure in maintaining the reserve on any given day.

The reserve limit, at whatever figure it is fixed, acts as a brake on the banking machinery. If Congress, when the National Bank Act was drawn, had fixed the New York city reserves at thirty per cent. instead of twenty-five, the alarm that is now excited when the twenty-five per cent. limit is passed would be felt just the same at thirty per cent. It is a matter of training the public mind to look out for something dangerous so that it may be on its guard. The \$100,000,000 gold reserve is a case in point. The public were prepared to be panic-stricken when the gold reserve got below \$100,000,000, although there was no precedent or logical proof that danger would arise when

this limit of reserve was reached any more than at ninety-five millions or one hundred and five. Now that the limit has increased to \$150,000,000, it may be expected that apprehensions just as poignant will arise in the public mind when the surplus above \$150,000,000 disappears, as those suffered when the surplus over \$100,000,000 disappeared.

The fact is that it is necessary in these matters to set up certain arbitrary measures by which the mind may steady itself. Just as the arbitrary selection of standard weights and measures is dictated by convenience, so certain points are selected as possible danger points in banking and finance beyond which it is decreed by a sort of general consent we must not pass. On this side safety, on that danger. The public become educated to this and the moral effect is wholesome. Confidence may be regained when the right side of the danger point is reached.

There is not, therefore, much advantage in changing in any way the reserve limits to which during forty or more years the financial public in this country have become accustomed. Complaints are heard from western bankers that the conditions of the New York money market have more influence upon the nerves of the financial public throughout the entire country than is warranted by actual conditions. The strength of banks is dependent on the changes in public confidence. The New York money market has so long been the switchboard from which the currents of confidence have been directed, that any change must of necessity be accomplished if at all very slowly. The giving of the legal-tender quality to National bank notes so that they may be counted as reserves would not, it is believed, produce any appreciable effect upon the amount of reserve held, and it would undoubtedly remove the greatest motive which now exists for the redemption of these notes, producing the only elasticity now existing in this kind of currency.

THE EMBARRASSMENT OF RICH MEN has been the feature of the stock panic of the year. This has been due for one thing to the lack of proper combination among them. When a man becomes so rich that he can count up his stocks and bonds and other properties in the millions, he naturally becomes independent in his own estimation, and this independence is the highest enjoyment he can obtain from his superior wealth.

The ambition of the promoter of great combinations is to obtain the support of the men of great fortunes. He could expect to do this only by offering unusual profits. The success of the great consolidations in steel, in ships, and in railroads depended on securing the co-operation of a syndicate of wealthy underwriters. To secure such a

syndicate each member had to be convinced that he would receive an unusual bonus. There was apparently no real community of interest among the members of these syndicates, in the same sense that there is among the stockholders of an ordinary corporation. They had no way of joining together and agreeing as to the management of the properties represented by the securities they were becoming sponsors for. All this was in the hands of the promoters and financiers who were engineering the combination. The underwriters depended on the sagacity and financial skill of the men who solicited and undertook to reward their support. Many of the rich men who became underwriters seem to have had an overweening trust in their own strength, a childlike confidence in those who sought their assistance. This confidence can only be explained on the ground that their judgment was impaired by the magnitude of the benefits promised. Confidence in their own strength was natural to each rich man. Possessing millions in securities of various classes, he had always been able to convert them into cash when he required it, either by sale or by using them as security for loans. He had no experience of a situation when all the rich men at once entered the money market in search of accommodation, nor was it easily to be foreseen that such a condition would arise. The steps which led up to it were gradual.

The first syndicates were successful; the awards held out materialized according to promise. The advantages of becoming underwriters grew upon wealthy men. It was only a matter of lending their names and receiving a bonus in securities which could at once be turned over to the investing public for cash.

It has been remarked that the whole process by which the millionaires were entrapped bears a remarkable similarity to that employed by FERDINAND WARD with a smaller type of victim. Elephants can be trapped as well as rats, and except the different magnitude of the construction required, the principle involved is the same. Just as some of the sufferers by the WARD failure had their eyes open to the nature of the business but hoped to get in and out before the crash came, doubtless among these rich men there have been some who engaged in these underwriting schemes who were caught simply because they thought the catastrophe would not come about so soon.

It has been remarked above that there was little community of interest among the underwriters. Each one stood on his own basis, and looked for profits not to his fellow underwriters but to the financiers and promoters who had drawn them together. Each appears to have had full confidence in his ability to take care of the stock which he underwrote regardless of anything his fellow underwriters might be expected to do. In fact, it might appear to a millionaire underwriter that independence of all the others, retaining the right to deal with

the stock allotted to him in his own way, was a valuable asset. His confidence in himself and his previous triumphant progress in monetary dealings would naturally lead him to so regard it. But just here was the weak point. If these millionaire underwriters had appointed a committee to handle all their expected holdings, had combined among themselves in fact, it is doubtful whether the panic would have occurred when it did if at all. But each was either confident of his own strength, or fearful that a confession of doubt to his associate underwriters would be regarded as a confession of individual weakness. That there were some among these underwriters who had their doubts became evident by the sequel. When these rich men began to scatter for the summer months to their country places or travelling tours and on their yachts, it might be expected that there would be a period of comparative quiet in the money market. Panics during the summer months are unusual. They either occur in the spring when financiers are settling up their affairs for the summer rest, or in the fall when they return reinvigorated for the fray. But it did not happen so this year. Some of these rich men were in doubt as to the value of their holdings, or they found themselves in too many syndicates, or they had better offers. Apparently some of them without consulting their brother underwriters, each perhaps thinking he had the advantage of being the only seller, tried the value of the securities he had received by the test of the market. The result, as is known, was disastrous, and really suicidal for those who started these sales, and even more disastrous for their associate underwriters who had not yet attempted sales. As the securities underwritten began to fall, all the underwriters came in to sustain them. So many rich men borrowing at once required sums which strained the market. To obtain money under such circumstances the best securities had to be offered, and as a consequence the prices of all securities fell. All of these rich men were bidding against each other. Such combinations as were effected for mutual support had to be made under every disadvantage.

It is not difficult to see now if the men who did the underwriting had in advance agreed to direct their sales on a common basis, had made provision to watch the markets and gradually feed out their combined holdings at such times and in such amounts as the market would bear, and if they had kept in touch with each other as to new underwritings, and exercised the same vigilance as to the general situation as they usually do in other matters, that this panic need never have occurred.

The properties involved have all been weakened by the dropping in their securities, and as a consequence their dividend-paying power has been lessened. Money that was needed for thousands of lesser

enterprises throughout the country has been diverted and confidence has been impaired. The usual flow of cash has been very much lessened. Great wealth of investment implies a lessening of the power to convert into cash as the proportion of invested wealth to cash increases. The greater the number of millionaires whose wealth is chiefly in securities, the greater the chance that they will compete with each other for ready money.

The way out is not through any speculative manipulation. The public will in time undoubtedly absorb all securities that can be depended upon to return reasonable incomes. When time sufficient has elapsed to make it clear what dividends and interest the depressed securities will pay with certainty, then investors will begin to calculate what price can be afforded for them. The way out of this trouble is to take care of the properties on which securities are based and to increase their income-paying power.

THE EFFECT OF SUBSTITUTING AN ASSET CURRENCY in the place of the present National bank currency secured by United States bonds, upon the market price of these obligations of the Government, has been but slightly studied. The advocates and supporters of an asset currency have concentrated their energies on the task of demonstrating, first, the safety of these credit notes, and, second, the superior adaptability of these notes to meet varying business conditions. They have not considered with the same careful scrutiny the effect of depriving the bonds of the Government of this important security function, which has kept up their market price, and has been of the utmost service to the Government in its refunding operations and in securing new loans at low rates of interest.

The credit of the Government underlies the monetary system of the United States to a greater extent than the credit of Great Britain supports the monetary system of that country. In fact, in no country in the world does the money in circulation depend to such a degree on the national indebtedness and its healthful credit in the open market. It is unnecessary to consider whether this is an advantage or otherwise from a business standpoint. It is certain that it has been one of the factors that has placed the national credit of this country in the very foremost rank. To abolish this connection between the Government and the banking interests will most certainly cause a falling off in the market prices of all Government securities.

It is customary to speak of two per cent. consols of 1930 as the bonds which would show this effect most conspicuously. The possibility of issuing these bonds for refunding purposes was dependent upon the demand for them as a basis of circulation. But while the

twos would no doubt show the most conspicuous decline in market value, were they no longer used as a basis of bank circulation, all other United States securities would be proportionately affected in the same way.

It is therefore easy to see that if United States bonds were deprived of their function of security for bank note circulation, both the banks and the Government would be losers. The banks would lose by the amount of the depreciation of the market value of the bonds held by them and the Government would lose by the reduction of its borrowing power. If it becomes necessary to place the bonds for the Panama canal on the market, does any one hope that they could be sold at par unless the rate of interest be raised ?

As to the vested rights of the National banks being of such a character that the courts would protect them, and grant damages, in case Congress should substitute an asset currency, and thus withdraw an element of value from the bonds, it is difficult to see that there is any thing in this view. There has been very slight pressure brought to bear on the banks to oblige them to issue bank notes on bonds. As a matter of fact, the only bonds the National banks are required to purchase and hold was the minimum amount of fifty thousand dollars, or less in the case of banks with a capital of less than \$200,000. It was the profit on the circulation and the chance of a growing premium on the bonds that induced banks to hold more than the minimum amount. The banks had the same opportunity to judge of the value of the United States bonds as investments under impending and existing conditions as any investor has in regard to any security.

But while there may be no obligation on the part of Congress to protect the interest of the banks, or to hesitate on this account to substitute an asset currency, yet it is palpable that the National banks will use their influence to prevent action that will lessen the values of their various bond holdings. Whether the desires of the banks will influence the action of Congress may be a question, but it is so obvious that a departure from the policy of the last forty years would have so serious an influence on the borrowing power of the Government, that Congress will hesitate before a step of such importance is taken.

There is, of course, one point of view from which it might be argued that the Government would be the gainer if steps were taken to reduce the market value of the bonds. If the bonds were no longer used as security for circulation, and if an asset currency were substituted for the present secured bank note, the Government could more easily purchase its bonds for the sinking fund and reduce the public debt more rapidly. Whether this advantage would outweigh the disadvantage of being compelled to pay higher rates of interest upon future loans, is a question for the consideration of Congress.

If it were certain that there would never again arise those contingencies which make new loans necessary, then it might be advisable to shape legislation so that the existing debt might be paid off as rapidly and cheaply as possible. The breaking out of the Spanish war and its vast consequences in bringing the United States into more direct contact with foreign powers—of which half the possibilities are not yet disclosed even to the most speculative—forbids the hope that this nation may not be called upon to borrow in the future as it has in the past.

It has been previously pointed out in the *MAGAZINE* that both the banks and the Government would be subjected to losses and disadvantages through the lessening of the employment of United States bonds as security by the substitution of an asset currency. This aspect of the subject is beginning now to attract the attention of the public, and the more it is reflected upon the more clearly the difficulty of effecting any change will be perceived.

The discussion of the merits of an asset currency, which has been progressing for a number of years in financial and political circles, has brought out many points. Is such a currency, even if it should be as safe and elastic as is claimed by its most pronounced advocates, really so indispensable as has been represented? The great accumulation of gold in the United States and its use in the convenient form of gold certificates has given the country up to the present date a sufficient expansion to meet all demands, and there is no reason to believe that this increase of gold will not continue, if the natural demand for more currency is not otherwise supplied. The present system of bank currency, secured by bonds, is a check on the danger of a possibly inflated paper currency, that would sooner or later put a stop to the inflow of gold. It not only stands thus as a bar to possible inflation, but the use of Government bonds as security sustains and increases the borrowing power of the Government both directly and indirectly. Indirectly it tends to enhance the value of other securities, especially State and municipal. A change of the bank currency system from one based on specific security to one in which the security is more vague and indefinite may produce serious effects not only on National credit, but upon the general business credit of the country.

THE NATIONAL BANK NOTES held in the Treasury cash show a tendency to increase in amount, the average being about fifteen millions at all times during the year. This does not seem to be a very large amount to be in the Treasury out of a grand total of such notes of over 420 millions. The Treasury is, however, the only redemption

agency of the National banks and such redemption as there is of these notes goes on under its auspices.

The parties that send in these notes for redemption are moved to do so either by the mutilated or worn condition of the notes or because they desire to procure gold or legal tenders in the place of them. These motives are sufficiently strong to bring about a redemption of about one-quarter of the whole volume of National bank currency annually. The notes when presented at the Treasury are paid by the Government, and are then sorted so that the proper amount may be charged to the five per cent. redemption account each bank is required by law to keep with the Treasurer. The aggregate of the five per cent. redemption fund is as a rule more than sufficient to meet all current redemptions. In fact, on the \$379,515,824 outstanding National bank circulation on September 30, the five per cent. would be over \$18,000,000. This fund as well as the legal-tenders (gold and notes), which banks retiring circulation have deposited, does not appear as a special fund on the Treasury accounts but forms a part of the general cash balance. The Treasury appears to use its own funds to redeem these notes, but in the case of bank notes based on bonded security it uses a fund that is supplied and replenished by the banks. A bank, theoretically, is supposed to keep its five per cent. fund intact at all times. When its notes to the amount of five hundred dollars have been redeemed by the Treasurer, the bank is called upon to make good that amount, by depositing five hundred dollars in its five per cent. fund. Sometimes, as a matter of fact, the bank may get behind with these remittances, and the Treasury may still be protected. Thus the five per cent. fund of a bank with \$100,000 circulation outstanding is \$5,000. A redemption of \$500 of its bills will reduce the fund to \$4,500. Strictly speaking, the Treasurer should retain the five hundred in bank bills he has redeemed, and not permit them to be returned to the bank either in the form of old or new notes until the bank sends on \$500 in gold or other legal tender to make good the five per cent. fund.

Sometimes the notes are sent back before the five per cent. fund is made good, and in this way the fund may occasionally be greatly reduced or perhaps wiped out before the bank re-establishes it. If in former years the banks had been permitted to become careless in remitting the installments necessary to keep the five per cent. fund intact, and the Treasurer should suddenly become more severe, the first effect would be an accumulation of bank notes in the hands of the Treasurer that he refuses to remit until the banks send in legal tenders to fill up the five per cent. fund. It is, of course, a convenience to a bank to get its notes back for reissue before it has to remit, as it thus suffers no reduction of its available cash. By being indulgent a

Secretary of the Treasury may thus keep from fifteen to twenty millions in circulation that might otherwise be locked up, nor would he run any risk as long as the five per cent. fund of any given bank was not really exhausted. But this is not exact enforcement of the letter of the law. It may be conceived that a Secretary of the Treasury, who, having been a banker, looked at transactions of this kind from a banker's standpoint, would be more lenient to the banks, so long as as the security was intact, than a Secretary who looked merely at the letter of the law.

The reason why so much larger amounts of National bank notes are retained in the Treasury under Secretary SHAW than under Mr. GAGE, his predecessor, appears therefore to be that Mr. SHAW is more strict in enforcing remittances before notes are returned to the banks. Yet a strict interpretation of this law, in regard to the five per cent. redemption fund, seems to bring out an absurdity. The law provides that each bank shall keep at all times in the Treasury a fund equal to five per cent. of its outstanding circulation. What is this fund for? Naturally, as it is called a redemption fund, it must be for the redemption of the bank's notes. Yet further provision of law strictly interpreted makes it impossible to use this fund for the intended purpose. When five hundred dollars of the bank's notes are redeemed out of the fund, the bank cannot have these notes redeemed with its own money, until it has sent on five hundred dollars to make the five per cent. fund good. This fund, therefore, serves no purpose under such an interpretation. The reasonable view of the whole law is that the fund is to be used as redemptions are made, and that the drafts on the fund are to be supplied by remittances from the bank; as long as the fund lasts, the notes redeemed should be restored to the bank for reissue. When the bank fails to remit to resupply the fund, then the notes redeemed after the fund is exhausted should be held as security. It is somewhat amusing to see Secretary SHAW criticized for a condition which results from a strict interpretation of law.

But though the real state of the case may be misunderstood, it is natural to deplore a tendency to a blockade more or less complete of the narrow limits of expansion and contraction of National bank notes in response to certain business demands. So much is said about currency elasticity that it is sad that the only exhibition of it that we are favored with under our monetary system should be rudely circumscribed. It is probable, however, that a stricter interpretation of the law was induced by the conduct of a few banks that have been remiss or dilatory in making remittances when required to do so. But the proper way to deal with these is to enforce the proper legal penalty against them. All the banks should not be made to suffer from the remissness of a few.

A FALL IN THE PRICES OF MATERIALS such as seems imminent will not be an unmitigated evil. The alarm that has been caused by the misfortunes of the stock market very naturally has brought about a pause in many enterprises and a desire for retrenchment. Every corporation and business concern will no doubt prepare itself for possible trouble. But while such a pause is wise, the result of a careful examination will, it is fully believed, be reassuring rather than otherwise, and confidence will because of it be restored more rapidly from the effects of the shock it has received. Retrenchment, however, will at first result in a falling off of orders and the accumulation of material must result in lower prices. But this reduction of the prices of material will shortly give a new start to enterprises that have been delayed by the high prices. A period of prosperity does not pass away all at once. It requires more than one shock like that of last summer to overturn so luxuriant a growth of business as has been enjoyed during the last five years. Nor is it necessary that the experience of last summer should be repeated. Bad as the effect of the disclosure of reckless and unwise financial transactions has been, the effect was only an indirect one on the general business. Perhaps it will teach a lesson that will be worth all it has cost. The prosperity period beginning in 1880 survived the panics of 1882 and the shock of the Baring failure in 1890. It survived the constant drag of the silver purchase legislation and only finally closed in 1893 on account of the distrust inspired by the condition of the currency. The great difference between that period and the present one, which commenced after 1896, is that the currency of the country is now on a much sounder basis and can hardly cause additional distrust when credit in certain directions seems overstrained.

THE CONVENTION OF THE AMERICAN BANKERS' ASSOCIATION, held at San Francisco last month, seems to have been successful in every respect. All the delegates were highly pleased with California in general and with San Francisco in particular. Nothing was left undone by the bankers of San Francisco, and of several other cities in the State, to make the visit of their guests a memorable one.

Only good can result from these yearly meetings of the bankers in different parts of the country. Aside from the benefits derived from the papers and addresses, the mingling of these representative business men from all sections of the United States is productive of great good to all concerned. The beneficial influences of the conventions are growing year by year.

We present a full report of the convention in this number, but must defer comment on the proceedings until next month.

GOLD CERTIFICATES AND OTHER FORMS OF PAPER CURRENCY.

The gold certificates in circulation, according to the Treasury statement of October 1, amounted to \$394,097,659, but the whole amount issued, including those held by the Treasury, as shown by the debt statement of the same date, was \$420,487,869. The gold certificates, therefore, exceed the legal-tender notes, including in the latter the Treasury notes of 1890, by \$56,308,853; they exceed the National bank notes outstanding by \$61,334; they are less than the silver certificates by \$44,227,131. The paper currency now available for use is \$1,669,808,420, divided as follows:

Silver certificates.....	\$484,715,000
Gold certificates.....	420,487,869
National bank notes.....	420,428,535
Legal tenders including Treasury notes.....	364,179,016
Total.....	\$1,669,808,420

Some forty millions of National bank notes are in process of retirement, but the lawful money deposited to secure these notes not being kept as a special fund, but being included in the general cash in the Treasury, cannot be taken as diminishing the total given above.

The paper currency of the country may be roughly described as consisting of four classes, with one-quarter of the total amount in each class. The silver certificates are protected by an equal amount in silver dollars; the gold certificates represent an amount of gold equal to their face; the legal tenders are protected by a gold reserve of over forty per cent. of their aggregate amount; the National bank notes are protected by United States bonds, by the general reserves of the banks, and finally, in addition, are a first lien on all the assets of the banks.

Estimating the silver dollars at their present bullion value in gold and adding this to the gold actually in the Treasury on October 1, the total gold reserve in the Treasury, supposing the Treasury to be liable for all this paper currency, is over fifty per cent. Compared with the holdings of gold by European banks, which in their own countries hold the public reserves in a manner somewhat analogous to that in which the United States Treasury holds the public reserves in the United States, the gold holdings of the Treasury exceed those of the bank or banks of any one country, and are equal to more than one-third of the holdings of all these banks together. The silver held by the United States Treasury is very nearly equal to the silver held by all the European banks.

It is plain, therefore, that this country has at least its fair share of the metallic money held as reserves. Considering the European banks as a whole it is also evident that they are using legal-tender silver as a reserve to an extent that encourages the view that the legal-tender silver money of the United States ought not to be looked upon with any present apprehension, either at home or abroad.

Gold certificates as a financial device have proved themselves a very happy one; in fact, the happiest that has yet been devised to strengthen the financial system of the country without too much interfering with existing conditions. The present strong condition of the Treasury is largely due to them. Although the recognition of the gold standard by the act of 1900 paved the way for their extensive use, yet the gold certificate has been the mechanism by which the principle recognized by that act has been practically enforced.

Financial experts are recognizing more and more that conditions brought about by bad expedients and laws cannot safely be swept away at once. The old and faulty system cannot be cleared away and a brand-new and more perfect system substituted for it, as an old house might be torn down from cellar to roof tree and a new one built in its place. Finance is in all its parts a continuing function of modern life. The day of the individual genius with his unexceptionable plan for radical reform of the currency has gone by. The monetary laws of the United States, and of the separate States, had gradually built up a monetary and banking system which prior to the act of 1900 has been with some justice described as a thing of shreds and patches. Good and bad principles were inextricably mixed in the system. To remove any part was to run the risk of destroying the whole.

The mint act of 1873, more popularly known as the crime of 1873, by its early recognition of the gold standard, as the necessary standard of account, was the chief bulwark that stood between the monetary system and utter confusion while the contest was raging which resulted in the confirming law of 1900.

Gold certificates were early authorized, but their use when the issue of silver dollars was progressing threatening gold redemption of the legal notes was a menace to the gold reserve. The act of 1882 provided that the issue of gold certificates should cease when the gold reserve fell below \$100,000,000. While the maintenance of the gold standard was in doubt, and the apprehension that gold might rise to a premium had a just basis, the temptation to redeem legal tenders and take out gold certificates was strong. The certificates added facility to the absorption by the public of the gold reserve. When in 1900 ample provision was made for the maintenance of the gold reserve on legal tenders, this action, together with the abandonment of silver purchases, removed the danger from the issue of gold certificates, and since 1900 they have been the means of accumulating and retaining gold in the country.

The gathering of a great gold reserve, both by the Treasury and the banks, has added strength to every part of the heterogeneous currency system. The gold not only protects the notes it is specifically supposed to represent, but the mass of it also tends to protect indirectly all the rest of the paper currency whether based on silver or on the securities deposited by the banks. This indirect protection gives a uniformity of value to all the currency, and cures to a great extent the fault of lack of uniformity in the principles on which these different kinds of currency are issued. The same result is indirectly obtained that could only be directly reached by abolishing the present monetary laws and substituting a new and uniform system. This indirect method has the advantage of not shocking prejudice or creating that alarm which is invariably aroused by sweeping changes in monetary laws. The arguments founded on the diversity and contradictory principles on which the present classes of paper money were issued lose some of their force, as the public begins more

and more to realize that the gold standard and the accumulating gold reserve necessarily throw their protection to an almost equal degree over all. There is not, under present circumstances, the same motive or necessity for the retirement of legal-tender notes that existed when they were the first and only means of withdrawing gold. The silver certificates and silver dollars are less and less a menace as the mass of gold certificates increases, for every one recognizes that when gold is wanted the gold certificates and legal-tender notes must first be exhausted before any one will seek to test the gold value of the silver dollar or silver certificate.

While, therefore, there is no present danger to be apprehended either from the silver or from the legal tenders, considering the past costly experiences with these two forms of money, and especially in view of the strong position of the Treasury, the matter of their proper adjustment should not be postponed to some future time, when under the stress of financial crisis they may again seriously threaten the stability of our monetary system.

A WALL STREET TRIBUTE TO CHICAGO.—The banks and trust companies of Chicago are entitled to credit for one thing which has not received the attention it deserves in this community.

These institutions have absolutely held aloof from "syndicate" operations, and have in the main confined themselves to legitimate banking on the soundest possible lines upon which banking can be conducted. They have continued to fulfill their office to the commercial community at large by lending money on grain, provisions, etc.—the best collateral on earth—and on stock exchange collateral as it could be done to advantage from time to time, without contracting facilities to merchants and manufacturers.

The result is that the Chicago banking situation to-day is sound to the core at a time when the sins of promotion and "syndicate underwriting" are coming to light at other centers.

The Chicago banks and trust companies possibly did not make as much money for their stockholders in the "boom" times as did banks elsewhere, but they are not now loaded up with a mass of undigested and indigestible securities which cannot be sold, and which are destined sooner or later to make a deep hole in profit and loss balances.—*Wall Street Journal*.

New Counterfeit \$10 United States Note.—Series of 1901; check letter C; plate number 86; J. W. Lyons, Register of the Treasury; Ellis H. Roberts, Treasurer of the United States; portraits of Lewis and Clark. This counterfeit is a well-executed lithograph production printed on good quality bond paper, but no attempt has been made to imitate the silk fiber of the genuine. The face design of the counterfeit appears flat, due to the failure to reproduce the light-and-shade effects of the genuine. This is particularly noticeable in the medalion portraits of Lewis and Clark and the picture of the buffalo. The color of the seal, numbering and large X with superimposed TEN, face of note, is pink instead of carmine. The lathe work on back of note is poor.

New Counterfeit \$20 National Bank Note.—On the First National Bank, of Mayfield, Ky.; check letter A; series of 1882; J. Fount Tillman, Register of the Treasury; D. N. Morgan, Treasurer of the United States; charter number, 2245; bank number, 5211; Treasury number, A961226A. This counterfeit is a plain, uncolored photograph, apparently the work of an amateur photographer. It is printed on paper of poor quality, no attempt having been made to imitate the silk fiber of the genuine.

THE RELATIONS OF LABOR AND CAPITAL.

[In the opinion of many bankers and others the present relations between labor and capital are a menace to the continued prosperity of the country. Believing that a full discussion of the subject will tend to a right settlement of existing difficulties, **THE BANKERS' MAGAZINE** has secured a number of special articles from the representatives of both sides of the controversy. The first article is contributed by David M. Parry, President of the National Association of Manufacturers; also President of the Citizens' Industrial Association of America, recently organized. Subsequent papers will present the views of labor leaders and others.]

IS ORGANIZED LABOR RIGHT? THE ONLY QUESTION.

*BY DAVID M. PARRY, PRESIDENT NATIONAL ASSOCIATION OF
MANUFACTURERS; PRESIDENT CITIZENS' INDUSTRIAL
ASSOCIATION OF AMERICA.*

Recent events instead of assuaging have only served to accentuate the alarm in business circles over the encroachments of organized labor on natural rights. It has been but a few weeks since the committee of labor leaders called upon President Roosevelt and subsequently issued a statement in which the President was credited with expressing himself to the effect that while the law compelled him to enforce the "open-shop" principle in the Government bureaus, he did not think the principle should pertain to private corporations. Another statement represented him as saying he was in favor of eight-hour legislation. The President refrained from dignifying this labor manifesto by giving it a formal reply, but he allowed the authorized statement to be made in the press that he had been misrepresented in a wholly unwarrantable manner. The labor leaders endeavored to have the country believe that they had been honored by a special conference with the President, and it appears that this also was a misrepresentation. The labor men called upon the chief executive and were received in the regular course of business the same as any other delegation would be received. Following upon the heels of this piece of insolence in taking liberties with the President of the country, comes the meeting of the Civic Federation in Chicago, at which the man who is reputed to be the most conservative and safest of the labor leaders makes a speech on the "open shop" in which he brazenly declares that unions have the right to prevent non-union men from being employed, and when persuasion fails to use force. He also declared that non-union men have no right to employment in unionized industries. It was with such seditious utterances as these that the address of the head of the miners' organization comes with a special startling significance.

Organized labor has in these several instances served notice on the country in an official and formal manner that no man shall be allowed to work in the industries it dominates unless he be a member of the union; that no employer shall have the right to hire any man except he be able to show a union card. Its leaders declare that they will stand upon the "closed-shop" principle and fight it out on that line. Here is an avowed assumption of sovereign rights, of extra-legal authority, that finds no legitimate place in our government system.

DAVID MACLEAN PARRY

**President National Association of Manufacturers
President Citizens' Industrial Association of America**

Individual freedom and the right of private ownership in property, the principal cornerstones of our system of government, are brushed aside and declared to be nil when organized labor is concerned. If an organization can abridge primordial rights to any degree, it can abrogate them entirely. The union man to-day transfers his birthright to his organization, and the latter becomes his taskmaster as well as his guardian. It may be argued that the organization can exist only by the consent of its members and may at any time become disrupted. This is true theoretically, but in practice the organization will dominate and the member must do its bidding willy-nilly; he learns that to complain is to suffer, and fear holds him steadfast. It is a despotism that unionism would become, and has become in certain trades, a despotism that would throttle the life of all industry. Organized labor stands as an avowed revolutionary force, and its usurpations of authority become serious when it is recalled that it claims a membership of over two millions of men.

The effects of the "closed shop" have been signally illustrated recently by the appointing of a receiver for the great shipbuilding and dry dock company in Brooklyn. Mr. Morse declared that his failure was due to organized labor. Men loafed about the works and some even went to sleep while supposed to be working. When remonstrated with they declared that they did not have to work; "that their organization took care of them." What was true in this instance is true to some extent in every unionized shop in the country. When men work for the union and not for the employer they learn "to soldier," and excuse their conduct on the ground that the less they do the more there is for some other man to do.

Wages are properly regulated by the laws of supply and demand, and so are prices, and so also are the returns on capital. Labor claims it produces all and gets about one-fifth of what it produces, while the other four-fifths go to capital. I have heard this statement or statements even more extravagant in character uttered many times. Yet the truth is that a six per cent. profit is considered good by many capitalists, and it is doubtful if the average profits would come up to that percentage. What capital does not get labor does get, and although it ought to be perfectly clear to every man that labor gets the great bulk of production, yet the labor agitators and the unions are continually declaring that the workmen are being despoiled and must organize to force the payment to them of the "all" that they produce. "Industrial democracy," they declare, will do this. Industrial democracy—a euphonious term for socialism, or in other words industrial despotism. Your industrial democracy means industrial confiscation; a seizing upon the four to six per cent. of production that goes to capital. It means the stoppage of that accumulation of capital which is so necessary for further progress, for it is only by increasing capital that man's capacity to produce can be increased. The danger to the country's future welfare in the constant teaching of ideas of the industrial democracy kind ought to be patent to all men that care to give a moment's thought to the subject. Yet there is an organization of an alleged two millions of men that stands on that platform.

When a union passes a resolution declaring that wages shall be raised ten per cent., is this a divinely-inspired action? In order that it may be perfectly valid it must have sprung from an intelligence hardly human, for what man or set of men can be found who can judge of the relative values of men's labor and of the things produced? It is sheer nonsense to say that the wage ad-

vances demanded by unions have any other basis than the notion of the men that they ought to receive better pay. It is difficult to find men who do not think that they are underpaid, and to attempt to regulate wages upon such an unstable basis as is afforded by the imaginations of men as to what they ought to get, is certainly an absurd undertaking. Yet we find apparently well-intentioned men who pretend to find some virtue in the artificial regulative scheme for industry. We are asked to arbitrate, which means to accept a compromise scale; but this scale has no more valid basis than the scale as originally demanded by the union. Artificial regulation spells disaster, not only to the employers but also to the workmen, for it means injustice in the division of production as between classes of labor, and it also means less and higher-priced production, consequently less consumption and a diminished employment for labor.

Then there is the eight-hour question. Organized labor has served notice that it intends to get its eight-hour bill through Congress at this session. I fear that the employers of the country are becoming wearied by the agitation on this question, but that it is important is pointedly illustrated by Australia where the eight-hour law having been in force for some time, the agitation is now on for a six-hour day. The average hours of labor have declined from about fifteen to about ten in the last century, and it has not been legislation or unionism either that has brought this about. Industrial progress determines the hours of labor necessary for men to work, and if it takes ten hours to produce the required product to satisfy the nation's needs, then ten hours it must be. The eight-hour day will only come when the capacity to produce is so multiplied as to make it possible. To attempt to bring it sooner must result in suffering to the many as well as loss to the few.

It is beside the question to argue that employers desire to oppress their workmen. The question of the hour is this: "Is organized labor right?" In its demands for the "closed shop," for the restricted apprenticeship system, for the eight-hour day, for the artificial regulation of wages, for industrial democracy; in its lawless attacks on the rights of non-members of its organization and the rights of employers; in its inflammatory appeals to passion and class hatred; in its abridgment of the right of employment, and in its denunciations of courts and its boycott on the militia, in all these things and much more: "Is it right?"

I deny that the great majority of employers desire to invent methods for the grinding down of wages. They stand ready and glad to pay the current rate of wages so long as they can figure any profit in so doing. They would pay a workman \$100 a day if there were a slight margin of profit in hiring him. It is not the employer's fault that the services of some men are of but little value to the world. In fact, the employer cannot regulate wages any more than the employee. Under competitive conditions the growing demand for labor tends to increase wages, and they rise until the margin of profit to the employer diminishes to the point where it is only sufficient to induce him to continue in business. Under artificial regulation there is no longer any certainty as to labor cost from year to year; and while in some industries it is possible to charge up the wage advances to the consumer, still this process has a very damaging effect on all other industries. An equitable division of wealth or of the products of labor can only be obtained by allowing the law

of supply and demand an unrestricted sway. Not only must labor compete against labor, but capital against capital.

I hold that it is impossible to devise any method to prevent the competition of capital with capital. Even supposing that a corporation has a monopoly, it cannot be done. It stands to reason that the profits from such a corporation will be reinvested in that corporation's business so long as it offers higher profits than any other investment, and as the increasing of its capital must increase its products, the prices of the latter must be lowered to broaden the market, and finally the percentage of profits of even this monopoly will approach the normal level of profits. But at the same time I do not believe in allowing any corporation to build itself up at the expense of other industries. In order that we may have symmetrical development, competitive conditions should be maintained throughout the entire industrial field.

I hold that there is but one way of preventing competition of labor against labor, and that is by destroying freedom and instituting tyranny maintained by force. That organized labor stands for some such tyranny is acknowledged in the frequent utterances of its leaders. They do not call their panacea for poverty a form of tyranny, but it is such just the same. Because they claim they are "for the uplifting of humanity" is no proof that they are right. A little unbiased and honest consideration of economic questions ought to convince any one that organized labor despotism would ruin civilization. The dismantled mills in England are to-day monuments to the folly of unionism. Shall the people of this country allow industry to decay and labor to become idle upon the streets of our cities just because a set of ignorant and designing schemers at the head of the labor movement declare that they are working for the emancipation of labor? I ask that the pretensions of these men to dominate the industrial world be challenged; that their theories be questioned, and that they be compelled to present facts to prove their contentions. Any cause that must deny the fundamental axioms of liberty in order to make excuse for its existence is, *prima facie*, a false and dangerous cause, and I assert that a little study of its theories and its effects must condemn it as being a retrogressive force, bringing ruin in its trail to the workmen as well as to the employers.

That the employers generally are realizing the menace that organized labor is to the best interests of the entire people is evident by the general organization movement among them during the last year in order to protect themselves and also the country from the danger that threatens. There is an old proverb, that there is no use of locking the stable door after the horse has been stolen. There is no use of waiting until organized labor has established the closed shop throughout the country, passed eight-hour laws, and otherwise fastened a semi-socialism upon us, before beginning to take steps to checkmate its power. Australia is an example of a country where organized labor has the upper hand, and where as a consequence great public debts, bankruptcy, industrial depression and other evidences of a deplorable condition of affairs exist, and this despite the fact that the country is a new and undeveloped land. The time to save this nation from similar disastrous experiences is now while yet there is time. I do not mean that the employers should resort to any drastic or retributive measures, but I do mean that they should become thoroughly organized, so that they can wield that legitimate influence over affairs which is their natural right. The mere existence of a local

employers' association in a town has a very salutary effect upon the conduct of public officials when it comes to enforcing the rights of citizenship. Newspapers and public men become loath to adopt demagogic methods when they know that such will meet with the opposition of the association. Legislatures will give a heedful ear to what the organized business element has to say when labor agitators demand legislation that infringes upon general rights. Such a local association has its weight in forming public sentiment, because it has the machinery for the dissemination of its ideas. My opinion is that every employers' association should carefully refrain from harsh measures, and should stand squarely on the platform that the constitution and the laws be enforced, and not attempt to meet force with force. By methods of peace is the victory to be won. We do not want to be at war with our employees, and we do not wish to see them led astray by blatant anarchists and socialists. We must appeal to the common sense of the workmen, and also to the fair-mindedness of the general public. The employers' organization should be a protest against lawlessness and false economic ideas. It should not be a machine for retributive vengeance. Any attempt to make it the latter will result in its disruption. The employer should attempt nothing except that which is fair, and if wisdom prevails in the councils of the association, the public will not be long in discovering that such is the case.

There is a class of employers in this country, and happily this class is growing less in influence, that finds in organized labor a valuable ally for their own schemes for setting at naught the law of competition. The joint agreement is in the major number of cases a means of stifling competition, and as the wage advances are also charged up to the consumer, the employer is quite ready to grant them. Then again there is the business man who is politically ambitious, and who grasps with avidity any opportunity to parade himself as a friend of the labor vote. The political employer is often an influential personage, being frequently trained to public speaking, and he manages in some cases to do as much harm to the country as the worst agitators in labor circles. But with the advent of the employers' association it will not appear so advantageous to the politician, whether he be a business man or not, to give himself over to labor demagoguery. With the business world properly organized, it is my opinion that this country need not fear the pernicious programme of the organized labor movement.

NEW COUNTERFEIT \$5 NATIONAL BANK NOTE.—On the First National Bank of Lynn, Mass.; check letter A; series of 1882; B. K. Bruce, Register; A. U. Wyman, Treasurer; portrait of Garfield; charter number 638; bank number 12084; Treasury number B850144. Another photograph, identical in workmanship with the \$10 note on the Millers River National Bank of Athol, Mass., previously described.

A QUEER RUN ON A BANK.—A recent despatch from a Pennsylvania town said: Foreign coal miners saw posters announcing the play "A Run on the Bank," and suspected that the First National Bank was the bank meant. They started a run in earnest, which the bank was able to meet with the assistance of the local coal operators. Many of the foreigners took their money to the firm, to have it taken care of. The cash was replaced in the bank and paid out several times.

EFFECTS OF THE DEPRESSION IN STOCKS.

The effect of the fall of stock values in consequence of overspeculation has undoubtedly been somewhat depressing on business throughout the whole country. It has caused all those who have money to invest or loan to lose some of the confidence which makes it easy to secure money for legitimate enterprise. But the effect has not been wholly bad. The setback which the great speculations displayed for the temptation of the investing public, by men of high reputation in finance, will make that public more wary and induce them to confine their capital to enterprises which are more directly under their own possible supervision.

There is no doubt that local business enterprises are generally prosperous. During the height of the speculative boom it is probable that it was the surplus money only, money that could not be used locally, that was drawn to the great undertakings of the syndicates. Very likely, since these opportunities displayed in the central money markets are no longer considered desirable, such sums as the disappointed investors are able to recover will slowly come back to the local markets and seek investment there.

There can be no dispute that the building and equipping of electric lines, for instance, and other enterprises of the same calibre, have had some check since the discrediting of the great combinations. The public is not so keen to take the stock of new enterprises of any kind, no matter how well they promise. The belief in the magic of financial transmutations has been greatly dampened. It is believed, however, that the accumulations of the last two or three prosperous years have been so great and so well distributed that such losses as have been experienced have not greatly reduced available capital, and that after sufficient time has elapsed to reassure those that hold this capital that there are still plenty of paying investments, honestly conducted, this capital will again be offered.

The charges of recklessness and allegations of dishonesty which have been made regarding the conduct of large enterprises on the part of men and institutions of high reputation, lead many to think that all promoters, little and big, may be affected in the same way. It is true that the force of the example of some who have risen to the highest monetary power is likely to have affected some of those influential in lower financial circles. The struggle for the control of great properties has no doubt been going on where lesser interests were at stake. The outside investing public, who in the end must be the source of the capital by which enterprises are initiated and sustained, has naturally got tired of being the mere pawn of would-be Napoleons of finance.

Any observer travelling through the country can glean from the conversation of the average man that he regards the stocks which these men seek to manipulate to their own advantage as dangerous. If the men who are in control of the railroads of the country, little or great, would devote their en-

ergies to improving these roads as earners of money and spend less time in the struggle for supremacy, the public would soon come to their support.

These contests to determine whether one clique or another shall own and manage a railroad demoralize the entire working force of the road. The men dependent on it for employment find that they are no longer valued so much for their honesty and ability in seeking to do good work, but for services they can render to one or the other crowd of financiers who are seeking supremacy. It results that many roads are badly managed, the public is poorly served, the earnings decrease, and the whole property is deteriorated. Necessary betterments are delayed or neglected until the contest is settled.

It is thus that demoralization spreads in all corporations when two or more cliques or coteries of stockholders are fighting each other. The working force feels that its tenure is uncertain. If the men who now direct the road are ousted by their rivals, the new heads may make changes clear through. Under these influences the old superiority of private business methods is falling to the level of political methods. While Government business is under civil service rules improving in character, private business is acquiring all the faults of which Government business was formerly accused. The raids for control of corporations great and small throughout the country have tended to demoralize their business to the remotest details and to drive out the small investor.

TO INSURE BANK DEPOSITORS.—The following information was published recently in the form of a despatch from Indianapolis, Ind., dated October, 27:

An effort is to be made to organize the banks of the country into a national bankers' mutual fidelity association, the purpose of which is to guarantee all creditors against loss. It is intended to constitute a guaranty fund out of a small percentage of the deposits of all the banks, which is to be paid to the central association. It is thought that a contribution of one per cent. of the deposits of all the banks will be ample protection to the creditors of any banks that may fail.

Samuel B. Archer, of Saratoga, N. Y., who is promoting the plan, thinks that its adoption would greatly lessen the number of bank failures. There is to be a close supervision of the banks by the association. Mr. Archer holds that with such protection to the creditors it would be safe to allow the banks to issue asset currency, over and above their present bond secured circulation, up to fifty per cent. of their capital.

One effect of the scheme if it were adopted, Mr. Archer says, would be to take the Government practically from the banking business. The associated banks would protect their own asset-note holders and depositors and would themselves hold the funds necessary to accomplish that end. If enough banks agree to come into the organization an association will be formed and Congress will be asked to give it favorable legislation.

TO DEMONETIZE MEXICAN DOLLARS.—The Board of Philippine Commissioners has just issued a proclamation announcing the demonetization of the Mexican dollar on and after January 1, 1904. Until that date the coin will be accepted at all the Government offices at the usual rate, which is equivalent to fifty cents American money.

THE PROBLEM OF WEALTH AND THE TRUST COMPANY AS TRUSTEE.

[Address of Hon. Lyman J. Gage, ex-Secretary of the Treasury and President of the United States Trust Company, New York city; delivered before the annual meeting of the Trust Company Section of the American Bankers' Association, held at San Francisco, Cal., October 20.]

We are accustomed to think of the serious problems which beset the poor, and we sympathize, or ought to sympathize, with them. The ever-present question of to-morrow, the possible failure of employment, the cost of living, the drawback of sickness, the calamity of death—these may be briefly summarized as the leading problems of the very poor. These problems do press a painful burden upon the larger mass of society. To secure immunity from them, to find honorable avenues for escape, to secure financial independence, in short, to accumulate wealth, is and forever must be, a natural and laudable ambition. But no sooner does one pass over from the army of the poor to the relatively smaller company denominated the rich or well-to-do, than he finds that the problems of life, if changed in their nature, are yet vexatious and troublesome. Having become possessed of a competence, he no longer fears the approach of his landlord for rent unprovided, nor is he anxious concerning to-morrow's bread or as to the wherewithal to clothe his family. Frequently, however, he learns that wealth is a burden and often a heavy one. He discovers an innate tendency in accumulated treasure to take unto itself wings. He finds that money flies as well as "talks." He is apt to learn how easy it is to lose in an hour the careful savings of months and years, and, in a sense wholly different from the Latin poet, he learns that the descent to the Avernus of financial disaster is easy and swift, and that it is difficult to recover his lost footing and escape to the upper air of financial freedom. He soon learns that when he loans money he is apt to borrow trouble.

In this country we have not well learned the lesson of content with reference to an acquired competence. The American business man seldom retires. He prefers to struggle on in the harness and to carry his financial problems to the inevitable end, not as a general rule from considerations of avarice (for in no country are the rich more generous or less avaricious) but from the sheer joy of achievement and the fascination which the conflict of business life has for him. In England they have learned better than we to be content with a competence, to relieve one's self of the burden of wealth and to devote one's energies to other purposes than the mere increase of the burden. In other words, there is in England a pronounced leisure class, men who have not merely withdrawn themselves from business but who will not even be burdened with the care of their own possessions and who leave it either to family solicitors or to fiduciary corporations. Thus freed from the burden, they find time to devote themselves to the politics of their country, the pursuits of literature, the cultivation of art, the enjoyment of their landed es-

tates and to the legitimate pleasures which a large cosmopolitan capital like London affords.

In America an ever-increasing number are learning this lesson. Their greatest problem is to find a suitable custodian for their wealth, to whom its cares and responsibilities may be safely delegated.

If, however, the American man of wealth does not wish to retire from business but, with his characteristic and inexhaustible energy, prefers, for the mere pleasure of achievement, to continue to add to his accumulated means, he is yet confronted by the possibility of disability through disease or infirmity of age and the certainty of death. Unless he is strangely indifferent, he cannot be unmindful of the question as to the ultimate disposition of his inherited or acquired possessions. If blessed by the ties of blood with a family, either lineal or collateral, he finds that he has become a kind of human providence to a dependent group, for the members of which, in varying degrees of duty, it is his pleasure to extend a protecting and helping hand. He must recognize that his children, who have been educated in the schools, cultivated by travel and refined in taste through social customs and manners, have in a sense claims upon him, and that there are few greater hardships in life than those sudden reversals of fortune where a child, reared in luxury, is suddenly called upon to face unaccustomed poverty.

Sooner or later the obligation must be discharged to make a wise disposition of his fortune, and as nothing is more certain than that he cannot himself continue to administer it, he is inevitably met by the question, "Whom shall I constitute my executor or trustee? Shall it be my eldest son? Frequently he is of all the family the least qualified. Shall it be one of the juniors? Such preference is apt to excite jealousy and bitterness and lead to unhappy dissensions. A trusted and experienced friend? He may not survive, and in any event his availability may alter through changed conditions and circumstances when it is too late to recall the trust. A legal counsellor? His ability and character may both be great, but the uncertainties of life surround him as they do other men, be he ever so competent and faithful. If provision is to be made for children and grandchildren, a long tenure of office in the trustee is of great importance; and if any or all of the fund to be transmitted is to be devoted to public charities, a permanent trustee then becomes inevitable. Moreover, there always exists the possibility of malfeasance and betrayal, the sins of omission and commission, whereby fortunes are too often dissipated and lost.

This problem, which to thoughtful and conscientious men is a grave one, the trust company, in its legal capacity as administrator, executor or guardian or trustee, is established to solve. Enjoying perpetuity, it is not subject to the vicissitudes of death. Controlled by the limitations and provisions of its charter, it is kept by the strong hand of the law within the limits of conservative operations. Presumably managed by a competent board of directors, the beneficiaries of the trust have the advantage of the collective wisdom of the experienced man, and in financial matters, "in a multitude of experienced counsellors there is safety." Inspected by independent officers of the State, any wrong doing by the officers of a trust company cannot long remain undiscovered. Possessed of ample capital, the beneficiary is guaranteed against loss through errors or willful dishonesty. Moreover, the trust company, in managing many estates, can do so with an economy not possible to individual

trustees. Undoubtedly there are often advantages in having as trustee an attorney who has advised the donor in the lifetime, and whose peculiar knowledge of the estate is valuable; but, as has been stated, such management in the nature of things cannot be long-enduring, but its advantages can be secured by uniting the family counsellor with the trust company, as co-trustees. In this manner both the special benefits of corporate management and those of an individual trustee can be secured.

I submit, therefore, that the burdens of the rich would be sensibly relieved if due regard were had to the advantages offered by the trust company.

This brings me to a closer consideration of what the trust company should be in its character, capital and methods of business, to enable it to discharge with zeal and fidelity the high duties imposed upon it in its fiduciary capacity as trustee. Its capital should be adequate to its responsibilities. Its officers and directors should be men of experience and with a single mind devoted to the institution they serve. Its corporate work, whether exclusively relating to its trust business or not, should be of a dignified character and free from hazard. Around the trust company should further be thrown the safeguards of wise legislation. In some of the older States, adequate provision in this respect has been made, and these beneficent laws could profitably be adopted by the States less fortunate.

The Legislature may well give careful consideration to this important function of financial corporations. It is true the trust company is comparatively a newcomer. The first of such institutions began business in the United States but little more than fifty years ago. The record of that half century is, however, upon the whole, an honorable one, and the extent of its services in the management of property is but imperfectly understood by those most requiring its special facilities. In the period in question few, if any, losses have occurred to any trust property by the delinquency of any trust company acting in a fiduciary capacity. There have unquestionably been, in such institutions, occasional acts of misfeasance by employees, but in no case that I can recall has the trust company failed to make good to the beneficiary the temporary loss thereby sustained.

I am firmly of opinion, therefore, that the growing value of such companies in the special work to which I have alluded should be made known to that class which we may justly hope is becoming numerically greater, to whom the problem of the proper management and ultimate disposition of their property presents itself as the peculiar problem of the rich.

Regulation of Corporations.—In a recent address by Judge Grosseup, of Chicago, the following remedy was proposed for the reckless abuses of incorporation and promotion: "The American instinct for the acquirement of property asks no impossible guarantees. But it asks, and it is entitled to have, knowledge of the facts. It can see with its own eyes the real estate or other individual property under barter; it cannot see as things now are through the tangled meshes of indiscriminate corporate organization. Put the organization of all corporations on a basis that is fixed, and, above all other considerations, simple and knowable; compel them to start on assets reasonably equal to their capital; keep them subject to inspection, as banks and trust companies are now organized and inspected, and uncertainty—not uncertainty of judgment, but uncertainty respecting the facts upon which judgment acts—will disappear. In this way, and in this way alone, in my judgment, can this increasing class of the property of the country be brought back into the people's ownership."

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

DELIVERY OF CHECK TO IMPOSTOR—EFFECT OF HIS INDORSEMENT.

Supreme Court of Nebraska, July 10, 1901, and June 18, 1902.*

HOFFMAN vs. AMERICAN EXCHANGE NATIONAL BANK.

Where the holder of a check indorses it to the order of a particular person, and delivers the same to one who falsely claims to be that person, the holder believing him to be such, a subsequent holder in due course acquires a good title to the instrument when indorsed by such impostor in his assumed name.

HASTINGS, C.: The plaintiff was acting as disbursing agent for the executor of an estate, from which one Peter W. Brubaker was entitled to receive \$264.15. The plaintiff had made considerable exertions to find Brubaker for the purpose of making this payment, but had failed to do so. Plaintiff had made to Brubaker two previous payments from the estate—one paid by a draft sent to Illinois and receipted for by him, and one payment made to him in person at Elizabethtown, Pa., where plaintiff resided. With reference to this third and final payment plaintiff had written to Omaha and to Illinois, and received no response. He finally received a letter dated July 2, 1895, saying: "Lincoln, Neb., July 2, 1895. Mr. C. S. Hoffman: I got a letter from my brother sate you wanted my address it is Peter W. Brubaker, Lincoln, Nebr."

To this plaintiff replied as follows: "Elizabethtown, July 5, 1895. Mr. Peter W. Brubaker: This afternoon I received your letter. I have been writing around to the different places where you were before, but the letters came back. You will take the release before a notary public, sign and acknowledge and have some person to sign as witness, and then return it to me, and I will send you draft for your share, less expenses. Yours truly, C. S. Hoffman."

The release was executed evidently to plaintiff's satisfaction, for on July 12 he sent the following letter: "Elizabethtown, July 12, 1895. Mr. Peter W. Brubaker, Lincoln, Neb. Your release to Jacob Risser, executor of the will of Peter Oberholtzer, dec'd, came back all right. Inclosed you find draft No. 5774 for \$264.15 which with \$1.75 for the expense of release and draft is in full of your share in the final distribution of the estate. Please let me hear from you when you get this so that I know that all is right. Yours truly, C. S. Hoffman."

The draft was cashed by the defendant bank, the recipient being identi-

* Withheld from earlier publication by order of the Court.

fled as Peter W. Brubaker by the notary, Walter A. Leese, of Lincoln, before whom the release had been executed, and in whose care the final letter and draft were sent by the plaintiff. The evidence, however, shows conclusively that the Peter W. Brubaker who was entitled to this money was not in Lincoln at that time, but in Indiana, and he received no money.

The trial court found, first, that the plaintiff intended the draft to be paid to the individual who received the money from defendant, and that defendant was not guilty of any negligence in paying it; second, that the defendant was led and induced to pay the draft by acts of plaintiff, and plaintiff's negligence prompted its payment; and, third, that the plaintiff was not the real party in interest, and could not maintain the action, it appearing that he was simply the agent of Risser, the executor of the estate from which the money came.

The liability of the defendant is asserted on the grounds set forth in section forty-two of the Negotiable Instruments Act of New York, which has been enacted in effect in fourteen other States, and is claimed to be declaratory of the common law. Said section forty-two reads as follows: "Where a signature is forged or made without authority of the person whose signature it purports to be, it is wholly inoperative, and no right to retain the instrument, or to give a discharge therefor, or to enforce payment thereof against any party thereto, can be acquired through or under such signature, unless the party against whom it is sought to enforce such right is precluded from setting up the forgery or want of authority."

It is claimed that this signature is a forgery, and the defendant therefore liable. As above stated, there seems to be no doubt that the real Peter W. Brubaker who was among the heirs of this estate never indorsed this draft. But it also seems clear that the plaintiff is not entitled to set up this claim.

A recent case in Rhode Island (*Tollman vs. American National Bank*, 48 Atl. 480, 52 L. R. A. 877) seems to sustain plaintiff's contention. Its syllabus has the following: "A check drawn payable to the order of A was procured by representations that the person to whom it was given was A, and the indorsement of the latter was forged thereto, and it was paid by the bank. *Held*, that the bank was liable to the drawer for such sum, both at the common law and under the statute." Rhode Island has adopted the statute above cited. The weight of authority, however, seems to be decidedly in favor of the doctrine that where a check or draft is drawn or indorsed and delivered to a party, to be cashed by him under the name in which it is made out or indorsed, that his signature by way of indorsement in that name is valid as between an innocent holder and the party delivering it to him. This is commonly put on the ground that the payer of the draft or the purchaser of it is simply carrying out innocently the intention of the maker or indorser. (*Emporia National Bank vs. Shotwell*, 35 Kan. 360; *Meridian Nat. Bank vs. First Nat. Bank*, 7 Ind. App. 322; *Robertson vs. Coleman*, 141 Mass. 235; *Levy vs. Bank of America*, 24 La. Ann. 220; *Land, etc., Co. vs. N. W. Bank*, 196 Pa. 230.) It is also placed sometimes, as was done in a measure in this instance, by the trial court, on the ground of negligence on the part of the maker. It is sometimes held that the payee is a fictitious person, and the check or draft therefore payable to bearer.

It is suggested in defendant's brief that the exemption from liability is more properly placed on the ground of estoppel, or, as it is stated in the Ne-

gotiable Instruments Act, that the party is "precluded from setting up the forgery or want of authority." It certainly would seem that in this case when Mr. Hoffman was satisfied with the release he got, and mailed the draft to the maker of that release, he asserted as definitely as a man could his desire that this money should be paid where it was paid. After that desire has been acted upon, and the false Brubaker has received the money, it would seem too late for the plaintiff to discover his mistake, and collect the money back from one who had paid it out to the individual he requested, though not the one he thought he was requesting to have it paid to.

It is recommended that the judgment of the district court be affirmed.

Day and Kirkpatrick, *CC.*, concur. Affirmed.

The plaintiff insists that the sole question in this case is whether the indorsement of the draft by the impostor was a forgery. We do not believe a determination of that question will dispose of this case. That the indorsement was a forgery may be conceded; but it does not necessarily follow that the plaintiff is entitled to recover in this action. We think the majority of cases, certainly the best-considered cases, hold that, under the circumstances shown in evidence in this case, an innocent purchaser is protected by such indorsement. (*Meridian Nat. Bank vs. First Nat. Bank* [Ind.] 34 N. E. 608, 52 Am. St. Rep. 450; *Emporia Nat. Bank vs. Shotwell*, 35 Kan. 360, 11 Pac. 141, 57 Am. Rep. 171; *Kohn vs. Watkins*, 26 Kan. 691, 40 Am. Rep. 336; *Land Title and Trust Co. vs. N. W. Nat. Bank*, 196 Pa. 230, 46 Atl. 420, 50 L. R. A. 75, 79 Am. St. Rep. 717; *Robertson vs. Coleman*, 141 Mass. 235, 4 N. E. 619, 55 Am. Rep. 471; *United States vs. Nat. Exchange Bank* [C. C.] 45 Fed. 163; *Crippen Lawrence & Co. vs. Am. Nat. Bank of Kansas City*, 51 Mo. App. 508; *Forbes vs. Espy*, 21 Ohio St. 474.) It has been suggested that the cases just cited may be classed under four heads, the basis of such classification being the ground upon which the courts place their respective decisions, which are as follows: First, that such indorsement effectuates the intention of the drawer; second, that the drawer has been guilty of negligence; third, that the drawer is to be treated as a fictitious person; fourth, estoppel. But such classification is unscientific, and is based on the language of the opinions, rather than upon any principle underlying them. A careful analysis of the cases will show, we think, that the controlling principle in each case is estoppel, which to our minds, is peculiarly applicable to cases of this character.

The plaintiff had money which belonged to Peter W. Brubaker. An impostor assumed the name of Peter W. Brubaker, and claimed the money. His identity was a question for the plaintiff. Satisfied that he was dealing with the real Peter W. Brubaker, the plaintiff indorsed and delivered the draft to the impostor. Of the contractual obligation thus created, the delivery of the draft was an essential element, and stamped the impostor as the person to whose order the plaintiff intended payment to be made. In other words, by the delivery of the draft to the impostor the plaintiff held him out to the world as his indorsee, and as the person to whose order he had, by his indorsement, directed payment to be made. He cannot now be heard to complain that the defendant acted on the indicia of identity with which he himself had clothed the impostor.

It is recommended that the conclusion reached in the former opinion be adhered to, and that the judgment of the district court be affirmed.

Ames and Duffie, CC., concur.

PER CURIAM: The conclusion reached by the Commissioners is approved, and, it appearing that the adoption of the recommendation made will result in a right decision of the cause, it is ordered that the conclusion reached in the former opinion be adhered to, and the judgment of the district court affirmed. Affirmed.

INDORSEMENT OF PROMISSORY NOTE BY CORPORATION WHICH HAS NOT COMPLIED WITH STATE STATUTE—LIABILITY OF MAKER.

Supreme Court of Colorado, May 5, 1903.

MCMANN vs. WALKER.

The holder in due course of a negotiable promissory note, who takes the same from a foreign corporation doing business in Colorado, may recover thereon against the maker, though such corporation had not, at the time of the execution of such note or afterwards, complied with the statutes of that State requiring foreign corporations to pay certain fees before engaging in business in the State.

The maker, by giving a note, conclusively admits, as to third parties purchasing before maturity, and in good faith, the legal existence of the payee, and its authority to take such note, and to negotiate and transfer it by indorsement.*

This was an action upon a promissory note executed and delivered in the city of Denver, and payable to the Sprague Collection Agency.

The payee was a foreign corporation, and at the time of this transaction had not, nor has it since, complied with the law requiring such corporations to pay certain fees before engaging in business in such State. (Sess. Laws 1897, p. 157, c. 51.) Before maturity, the plaintiffs, for value, and without notice that the payee had not complied with the law relative to foreign corporations, purchased the note from the payee in the city of Denver. In an action by the purchasers against the maker to enforce its collection, the trial court held that the note was void, and rendered judgment for the defendant.

GABBERT, J.: The only question necessary to determine is whether or not a negotiable promissory note in the hands of parties obtaining it for value, in good faith, before maturity, from a foreign corporation in this State, to which it was given in this State, is invalid as against the maker, because such corporation, at the time of the execution and delivery of such note or subsequently, had not complied with the laws relative to the conditions which would authorize it to engage in business within the State.

The question is one which has been discussed by the courts of several States, with the result that the decisions on the subject are not altogether harmonious.

Whether or not the note in question be invalid as between the maker and payee is a question upon which we express no opinion, because that proposition is not involved, and does not in any manner affect the rights of the parties to this action. The statute which the maker invokes does not provide that a note given a foreign corporation in the circumstances narrated shall be invalid in the hands of third parties, and it should not be given a construc-

* Negotiable Instruments Law (New York act) section 110. The law further provides: The indorsement or assignment of the instrument by a corporation or by an infant passes the property therein, notwithstanding that from want of capacity the corporation or infant may incur no liability thereon. (Section 41.)

tion, unless unavoidable, which would result in visiting upon innocent third parties a penalty for its violation by another.

In this State the general rule of law prevails that negotiable commercial paper, although invalid as between the immediate parties, is valid as to third persons obtaining it for value before maturity, and without notice of its infirmities, unless so declared by statute. (*Boughner vs. Meyer*, 5 Colo. 71, 40 Am. Rep. 139. See, also, *Sondheim vs. Gilbert*, 117 Ind. 71, 18 N. E. 687, 5 L. R. A. 432, 10 Am. St. Rep. 23, where the subject is fully discussed and many authorities cited.)

The defendant, by giving a note which is not the subject of statutory enactment, thereby conclusively admitted as to third parties purchasing before maturity, and in good faith, the legal existence of the payee, and its authority to take such note, and to negotiate and transfer it by indorsement. (Section 60, Negotiable Instruments Act [Sess. Laws 1897, p. 223, c. 64]; 4 Enc. Law [2d Ed.] 474, 475; *Wolke vs. Kuhne*, 109 Ind. 313, 10 N. E. 116; 1 Edwards' Bills and Notes [3d Ed.] § 363; *Bigelow on Estoppel* [4th Ed.] 512.)

The plaintiffs were in no manner connected with the original transaction, and they violated no law in purchasing the note from the payee. They purchased it in good faith, before maturity; it was negotiable in form; and the maker cannot be heard to say, as against them, in these circumstances, in the absence of a statute to the contrary, that the payee committed an illegal act in taking, or had no authority to dispose of, it, in the usual course of business, because by its execution and delivery he is precluded from raising any of these questions as against the purchasers, who obtained it for value, before maturity, without notice of the fact upon which he relies to defeat it. The courts cannot undertake to render the statute relied upon by defendant effective by imposing penalties which it has not provided, or placing them where they do not belong. If defective because no sufficient provision is made for its enforcement, that is a matter for the Legislature to remedy. According to the undisputed facts, the plaintiffs were entitled to a recovery on the note. The judgment of the court is therefore reversed, and the cause remanded, with directions to render judgment in favor of the plaintiffs.

Judgment reversed.

KNOWLEDGE OF BANK OFFICER—WHEN BANK NOT AFFECTED BY.

Supreme Court of California, June 9, 1903.

MCDONALD (EEL RIVER & E. R. CO., INTERVENER) vs. RANDALL.

Where the President of a bank procures the note of a third person to be discounted by the bank for his own benefit, the bank is not chargeable with his knowledge that the instrument was given without consideration.

This action was brought to obtain a decree cancelling a mortgage on the ground of want of consideration. The note, to which the mortgage was an incident, was a negotiable instrument. It was regularly indorsed by the payee, Randall, and delivered to the Randall Banking Company before its maturity. At that time Randall was indebted to the banking company in an amount much larger than the amount of the note, and the banking company received the note and the mortgage as part payment of Randall's indebtedness to it, and credited the full amount of the note on such indebtedness. The court found "that the said Randall Banking Company purchased said

note and mortgage in good faith, in the ordinary course of business, and for value, before its maturity, and in ignorance of the fact that, as to Margaret H. McDonald, one of the makers, it was given without consideration, or for a debt which was barred by the statute of limitations."

McFARLAND, J.: It is contended that this finding must be held to be unwarranted, because it appears, and the court found, that Randall was the President of the bank and knew of the consideration of the note. But, when he procured the bank to take the note as part payment of his indebtedness, he was acting individually and at arm's length to the bank, and his knowledge was not the knowledge of the bank. The same may be said of the former secretary, Murray, who was absent when the bank acted in the matter of accepting the note and the mortgage, and who obtained his knowledge while acting for Randall individually, and also of Roberts, who was elected Secretary on the day the bank acted, and who presented the note and mortgage to the bank for and as agent of Randall. The note and mortgage were accepted at a meeting of the board of directors of the bank at which were present Hill, the Vice-President, and four of the other directors, Randall not being present. Neither Hill nor any of the other directors knew that the consideration of the note was an outlawed indebtedness.

The fact that some of them knew, or should be held to have known, that shortly before the making of the note and mortgage the property covered by the mortgage had been conveyed to the plaintiff by her husband—it formerly having been community property—and that the conveyance had been recorded, is of no significance. The validity of the transaction here involved was in no way dependent upon the time at which she acquired title to the mortgaged premises.

That a corporation is not chargeable with the knowledge of one of its officers or agents, who is acting on his own behalf, and not for the corporation, is beyond question the law. Sufficient authorities are cited to the point in *Bank vs. Burgwyn*, 110 N. C. 267, 14 S. E. 623. It is there said, among other things: "In such transactions the attitude of the agent is one of hostility to the principal. He is dealing at arm's length, and it would be absurd to suppose that he would communicate to the principal any facts within his private knowledge affecting the subject of his dealing, unless it would be his duty to do so, if he were wholly unconnected with the principal."

As was said by the court in *Wickersham vs. Chicago Zinc Co.*, 18 Kan. 481, 26 Am. Rep. 784: "Neither the acts nor knowledge of an officer of a corporation will bind it in a matter in which the officer acts for himself and deals with the corporation as if he had no official relations with it." Or, as was said in *Barnes vs. Trenton Gaslight Co.*, 27 N. J. Eq. 33: "His interest is opposed to that of the corporation, and the presumption is, not that he will communicate his knowledge of any secret infirmity of the title to the corporation, but that he will conceal it."

We are of the opinion that the finding above discussed cannot here be disturbed, and therefore it is unnecessary to consider any other point argued by respondents.

The judgment appealed from is affirmed.

SUIT AGAINST DIRECTORS OF NATIONAL BANK—WHO MAY MAINTAIN SAME.

United States Circuit Court, Northern District Illinois, July 1, 1903.

BOYD, *et al.* vs. SCHNEIDER, *et al.*

The creditors of an insolvent National bank cannot bring a suit against the directors to recover from them funds alleged to have been lost their negligence.

Such an action can be maintained only by the Receiver.

This suit was originally brought in the Superior Court of Cook County, Illinois, but was removed into the United States Circuit Court. The bill was filed by certain creditors of the National Bank of Illinois, an insolvent corporation, to recover from the defendants funds alleged to have been lost through negligence on the part of the directors of the National Bank of Illinois in the management of said bank; asking that the amount of money so lost "may become an asset of said bank, and of the receivership thereof, and be distributed by said Receiver according to law." The bill charged that, after exhausting the assets of the bank and the liability of the stockholders, there still would remain a large sum due to the various creditors, including complainants. To meet this deficiency, complainants prayed that an account be taken of what has been lost of the assets of the bank through the negligence, carelessness, and misconduct of the directors, and each of them; that it might be ascertained for what amount each of them should be held responsible in the premises; and that, when ascertained, each of said directors be decreed to pay the amount so found to be due from him to E. A. Potter, Receiver of said bank, to be by him distributed in accordance with law. The bill further charged that complainants had applied to the Receiver to institute the suit, and that he has refused. To this bill the defendants demurred.

KOHLSAAT, *District Judge*: There are two points made by the demurrers which seem to me to call for consideration, as preliminary to all others raised, since they go to the rights of the complainants to maintain a suit against the defendant directors. The one is as to whether, under the banking act, a suit can be brought by any person other than the Receiver, acting under the Comptroller of the Currency. The other is, conceding the right to bring suit without the direction of the Comptroller, whether creditors can maintain a suit like the one at bar against the directors to recover a corporate asset. Section 5239 of the banking act of the United States, tit. 62 (U. S. Comp. St. 1901, p. 3515), provides that:

"If the directors of any National banking association shall knowingly violate or knowingly permit any of the officers, agents or servants of the association to violate any of the provisions of this title, all the rights, privileges and franchises of the association shall be thereby forfeited. Such violation shall, however, be determined and adjudged by a proper circuit, district or Territorial court of the United States in a suit brought for that purpose by the Comptroller of the Currency in his own name before the association shall be declared dissolved. And in cases of such violation, every director who participated in or assented to the same shall be held liable in his personal and individual capacity for all damages which the association, its shareholders or any other person shall have sustained in consequence of such violation."

Considerable difference of opinion has arisen in the courts concerning the construction to be placed upon this section. Judge Shiras, of the Northern

District of Iowa, has held in *Welles vs. Graves* (C. C.) 41 Fed. 459, and *Gerner vs. Thompson, et al.* (C. C.) 74 Fed. 125, that, before suit can be brought by a Receiver against directors to enforce their liability under this act, it must appear that a forfeiture of the charter of the bank has been adjudged in accordance with section 5239. To the same effect is *Bank vs. Peters* (C. C.) 44 Fed. 13. While the case of *Hayden vs. Thompson, et al.* 71 Fed. 60, 17 C. C. A. 592, and *Stephens vs. Overstotz* (C. C.) 43 Fed. 771, hold the contrary. Thompson, in his *Commentary on Corporations* (volume 3, § 4303), speaks of the former construction as unsound. I am inclined to the opinion that such a proceeding by the Comptroller to declare a forfeiture is not a prerequisite to the bringing of a suit under section 5239. In the case of *Gerner vs. Thompson*, just cited, Judge Shiras also holds that directors would be liable, independently of the statute, in an action of deceit. The case of *Hayden vs. Thompson* states that the right to recover dividends wrongly paid out existed long before the act of Congress was passed. This doctrine is further sustained by the following authorities: *Richmond vs. Irons*, 120 U. S. 27; *Brinckerhoff vs. Bostwick*, 88 N. Y. 52.

There can be no doubt, from a reading of the bill, that it is based upon the statute. It is a proceeding brought to recover losses of the Illinois National Bank growing out of the wrongful acts of defendants, as directors, under section 5239 aforesaid. Can the liability and obligation imposed by the statute, being assets of the bank, be enforced by any one other than the Receiver, except as in the act provided?

National banks are the creatures of the national legislature. So far as the act attempts to regulate them, it is supreme. It is not intended that they shall be created only to be launched as independent corporate entities, and thereafter be permitted to engage in general competitive commercial enterprises, subject only to certain general rules and limitations; but, owing to their relations to the moneyed and other interests which are reserved in and controlled by the Government, they are kept under the strict regulation and watchful care of the Government, and constitute a class of corporations entirely distinct from all others. It would seem that the powers given by the statute to the Comptroller are in their nature judicial. He can determine when a bank is insolvent. He alone is charged with the duty of enforcing compliance with the provisions of the law, subject only to the regulation of the Secretary of the Treasury. He must, through the Receiver, take possession of all the bank's assets, collect and compromise debts, and sell the real estate. He alone can determine the need of and appoint a Receiver. The Receiver must pay the moneys collected by him to the Treasurer of the United States, subject to the order of the Comptroller. The Comptroller, through his Receiver, is required to give notice to creditors to present claims, and make dividends from time to time. He is authorized to determine when it is necessary to institute proceedings against stockholders to enforce their stock liability. All these questions are referred to his judgment and his discretion. The Receiver is the proper party to institute all suits. (*National Ex. Bank vs. Peters* [C. C.] 44 Fed. 13; *Bailey vs. Mosher*, 63 Fed. 488, 11 C. C. A. 304; *Stephens vs. Overstotz* [C. C.] 43 Fed. 771; *Jackson vs. U. S.* 20 Ct. Cl. 305; *Bowles on Nat. Bk. Act*, § 425; *Kennedy vs. Gibson*, 8 Wall. 498; *Zinn vs. Baxter*, 65 Ohio St. 341; *Casey vs. Galli*, 94 U. S. 673; *U. S. vs. Knox*, 102 U. S. 422; *Bushnell vs. Leland*, 164 U. S. 684; *Glenny vs. Langdon*, 98 U. S. 20.)

In re Manufacturers' National Bank, 5 Biss. 499, Fed. Cas. No. 9051, was a proceeding instituted to throw the bank into bankruptcy. Judge Blodgett denied the petition upon the ground that the banking act was complete in itself. He held that the act furnished, "through the functions of an important public officer, the Comptroller of the Currency, a very complete and detailed scheme or plan for administering the affairs of an insolvent bank," and intimated that the sense of responsibility of the Comptroller would be sufficient to insure his action in all proper cases. Again he says, as to National banks, they constitute a class of corporations which have, as it seems, a bankrupt law of their own, ingrained into their own constitution, and a part of their organic law, by the same authority which enacted the bankrupt law.

In *Bank of Bethel vs. Pahquioque Bank*, 14 Wall. 383, the court say:

"All alike must wait the action of the Comptroller of the Currency, and be content with a just and legal distribution of the proceeds of the assets collected by the Receiver and liquidated by the Comptroller according to the act of Congress in such case made and provided."

Defendants claim that the status of such a Receiver is analogous to that of an assignee or trustee in bankruptcy, a statutory assignee, or an administrator. In *Glenny vs. Langdon*, 98 U. S. 20, the court, referring to a suit brought by a creditor on refusal of the assignee in bankruptcy to sue, say the assignee is the only party designated by the bankrupt act as the proper claimant of the bankrupt's property and estate. It is further there held that, in framing the act, Congress intended to provide instrumentalities for its complete execution. The right of the creditor in such case to bring suit was denied. In *Plow Co. vs. Bank*, 59 Kan. 38, the court denied the petition of a creditor to be allowed to bring suit upon the refusal of the assignee to sue. Indeed, it is almost axiomatic, and scarcely requires citation of authorities to support the proposition, that in case of bankruptcy, statutory assignments, administrators, executors, and similar officers, no one can sue except the party occupying the official position. (*Brown vs. Folsom*, 62 N. H. 527 [an assignee]; *Mechanics and Farmers' Bank*, 31 Conn. 63 [an assignee]; *Jefferis' Appeal*, 33 Pa. 39 [an assignee]; *Glenny vs. Langdon*, 98 U. S. 20.)

In *Platt, Receiver, vs. Beach*, 2 Ben. 303, Fed. Cas. No. 11,215, the court holds a National bank Receiver to be an officer of the Government which appoints him.

In *Price, Receiver, vs. Abbott* (C. C.) 17 Fed. 506, Justice Gray said:

"By the statutes of the United States, the Secretary of the Treasury is the head of the Department of the Treasury, and the Comptroller is the chief officer of a bureau in that department. * * * Being appointed pursuant to an act of Congress, to execute the duties prescribed by that act, he is, in the execution of those duties, an agent and officer of the United States."

In *Jackson vs. U. S.* 20 Ct. Cl. 305, Justice Davis says the intent of the statute is to throw the entire control of insolvent National banks into the hands of the Comptroller, to centralize power and responsibility, for the purpose of facilitating winding up the affairs of the association. Such, also, is the holding in *Bailey vs. Mosher*, 63 Fed. 488, 11 C. C. A. 304.

It is urged that the Receiver, being appointed by the Comptroller, and not by a court, does not come within the rule above stated, and that to hold otherwise would be to invest the Comptroller with judicial powers. But

does it require any greater judicial power on the part of the Comptroller to exercise complete control over his Receiver than is involved in the appointment of a Receiver? Has not the act clothed the Comptroller with powers which have always been deemed judicial? The power to appoint a Receiver carries with it the power to remove him. (*Kennedy vs. Gibson*, 8 Wall. 498.) Would a court allow any person to bring a suit which should be brought by its Receiver? If the Receiver failed to protect the assets of the estate committed to his care, he would be personally liable. Suppose a court should, upon investigation, determine that no cause of action existed, and refuse to permit its Receiver to sue; could any person feeling aggrieved bring suit in his own name? If, on the other hand, a Receiver refused to sue, the court might remove him, or, in a proper case, allow the party interested to sue in his name on giving proper indemnity? Are not the Comptroller and his Receiver in a like position? The identical question here involved does not appear to have been adjudicated. It is true that Federal courts have seemingly entertained suits brought by stockholders against directors to recover for negligent management of a National bank's affairs, as in *Ex parte Chetwood*, 165 U. S. 443, and in many other cases, but in no case was the point raised that the suit should be brought by the Receiver. The case last cited was brought in the State court, and went up on writ of error. It was based upon the common law liability of the directors. Other cases turn upon facts different from those of the case at bar.

It would seem that the rights, duties, and powers of the Receiver of a National bank could hardly be arrived at by analogy to those of any other Receiver, but must be looked for in the act. If these creditors can maintain their suit, then others might institute proceedings to recover some other asset, and the liquidation proceedings might be unconscionably prolonged. Have the complainants not had the benefit of the statute, so far as the remedy here sought is concerned, when they have applied to the Comptroller, and he, on investigation, has decided that the suit should not be instituted? For these reasons, I should be inclined to hold that the complainants cannot maintain their action herein, in the manner in which it has been instituted, but do not deem it necessary to dispose of the matter on that ground alone.

These complainants seek to recover from the defendants the amounts lost through the defendants' wrongdoing—not simply the amount due the creditors, but the whole amount wrongfully dissipated. Damages sustained by the creditors alone would not belong to the Receiver. (*Thompson on Corporations*, § 4304.)

This proceeding must then be in the interest of the stockholders, as well as of depositors. This suit is by the creditors, as a class, to assert a right which, it is admitted, vested in the Receiver, who could not bring suit for the creditors alone. The stockholders are not joined. They constitute another class. Complainants have no interest in the fund sought to be thus recovered, above the amount of their own claims. No recovery could be had beyond the amounts due the class bringing the suit. Complainants thus place themselves in the attitude of attempting to sue for two classes. The position of a stockholder would be different. He would be interested in the whole fund.

Lord Cottenham said in *Mozley vs. Alston*, 1 Phil. 790-798 *et seq.*, that the relief which is prayed must be one in which the parties whom the plaintiff

proposes to represent all have an interest identical with his own. (1 Daniells, Ch., side pages 240 and 241, and other cases cited.) There are, however, many authorities which go to the extent of holding that, in cases similar to the case at bar, creditors cannot maintain an action against directors for the creation of a fund. (Landis vs. Sea Isle Co. 1 Am. and Eng. Corp. Cases, 208; s. c. on Appeal, 53 N. J. Eq. 654; Deaderick vs. Bank, 100 Tenn. 457; Bank vs. Hill, 148 Mo. 380; Bailey vs. Mosher, 63 Fed. 488, 11 C. C. A. 304; Kennedy vs. Gibson, 8 Wall. 498; Platt, etc., vs. Beach, 2 Ben. 203, Fed. Cas. No. 11,215; Gerner vs. Thompson [C. C.] 74 Fed. 125; Stanton vs. Wilkinson, 8 Ben. 357, Fed. Cas. No. 13,299; Bank of Bethel vs. Pahquique Bank, 14 Wall. 383; Bank vs. Peters [C. C.] 44 Fed. 13; Briggs vs. Spaulding, 141 U. S. 132; Landis vs. Sea Isle Co., above cited.)

Complainants lay much stress upon the claim that there exists between creditors and the trustees the relation of trustee and *cestui que trust*, citing among other cases that of Hornor vs. Henning, *et al.* 93 U. S. 228. That suit was brought against the trustees of the Washington Savings Bank, organized under section 4 of the act of Congress passed May 5, 1870, c. 80 (16 Stat. 102), which provides (bottom of page 105) that:

"If the indebtedness of any company organized under this act shall at any time exceed the amount of its capital stock, the trustees of such company assenting thereto shall be personally and individually liable for such excess to the creditors of the company."

The only point before the court was that the liability created by a violation of this clause of the statute constituted a claim inuring to the benefit of all creditors, and that an action at law could not be maintained thereon by one creditor among many, but that the remedy was in equity. This case might be in point were the case at bar based upon a liability to the creditors alone, but it has no bearing upon the issues here presented. There are cases which on casual examination seem to hold that the directors occupy some sort of a trust relation toward general creditors, but the language is loosely used, and evidently not intended to lay down the principle contended for by complainants. It may be fairly gathered from these decisions that all they intend to hold is that the relationship is similar to that of trustee and *cestui que trust*. If, however, the relation between the creditors and the directors is that of a trustee and *cestui que trust*, the right of action would not vest in the Receiver, but in the creditors. It is not a bank asset, nor is it a general asset. The Receiver, standing in the shoes of the bank, could not assert such a claim. It would be personal to the creditors. If, then, this suit is brought to recover an asset of the bank—and I am of the opinion that it is so brought—and the liability sought to be enforced grows out of a trust relation between the parties hereto, complainants have mistaken their remedy. I do not deem it necessary to pass upon the other ground of demurrer presented, at this time.

The demurrer is sustained.

POWER OF BANK TO PURCHASE ITS OWN STOCK—EFFECT OF TRANSACTION.

Supreme Court of Alabama, July 10, 1903.

DRAPER vs. BLACKWELL & KEITH, *et al.*

In the absence of statutory restriction, a solvent banking corporation, not contemplating insolvency or dissolution, may purchase its own stock in payment of a previously existing debt due from its stockholder.*

Such a purchase does not necessarily operate to withdraw the purchased shares from the capital stock of the corporation or as a fraud on creditors; but the stock when so taken and transferred, becomes the property of the bank, and may be resold or held for the benefit of the creditors and the remaining stockholders, together with any dividends that may be earned on it.

SHARPE, J.: In the absence of statutory restriction, a solvent banking corporation, not contemplating insolvency or dissolution, may purchase its own stock in payment of a previously existing debt due from its stockholder. (Morse on Banking, § 716; Zane on Banking, § 119; Boone on Banking, § 218.)

Such a purchase does not necessarily operate to withdraw the purchased shares from the capital stock of the corporation, or as a fraud on creditors. The shares, when so taken and transferred, become the property of the bank, and may be resold or held for the benefit of creditors and the remaining stockholders, together with any dividends that may be earned on it. (Boone on Banking, § 218; Taylor vs. Miami Ex. Co. 6 Ohio, 176.)

In this case complainants seek to hold the defendant liable for debts due them, as depositors, from a bank incorporated pursuant to the laws of this State as the Bank of Anniston, and which made a general assignment for creditors September 28, 1898. By the bill it is alleged, in substance, that on January 27, 1894, the bank, by its board of directors, "undertook to withdraw from its capital stock 287 shares, of the par value of \$100 each, and thereby reduced the assets of said bank and its capital stock in an amount equal to the value of said shares at \$92 per share"; that this was done, without notice to the public or its customers or creditors, "under the following resolution, adopted by the board on January 27, 1894, to wit: 'Now be it resolved, first, that any stockholder who is indebted to the bank is hereby authorized to pay not exceeding 75 per cent. of his debt by transferring and assigning enough of his stock at ninety-two (92) dollars per share to pay said amount, and the Cashier is authorized to credit the same upon such debt or debts.'"

It is further alleged that at that time defendant was a stockholder and director in the bank, and participated in the passage of the resolution; that a firm of which he was a member then owed the bank about \$4,150, by three notes, dated November 4, 1893, due in 60 or 90 days, and indorsed by defendant; that under the resolution defendant "turned into said bank 42 shares of his stock at \$92 per share, and, among other things, obtained therefor said three notes, and thereby withdrew from the capital stock of said bank that amount."

Further, it is alleged that about November, 1897, the bank published a

* National banks are permitted to purchase their own stock when "necessary to prevent loss upon a debt previously contracted in good faith, but the stock so purchased must be sold or disposed of at public or private sale within six months from the time of purchase." (Rev. Stat. U. S. Sec. 5201.)

statement showing its capital stock to be \$78,950, which sum included 287 shares which had been surrendered to the bank in January, 1894, under the resolution referred to, without which surrendered shares the capital stock was only about \$50,000; that the withdrawal of the 287 shares under the resolution was a fraud on the existing creditors of the bank, and those who became creditors subsequently without knowledge of the fact; and that complainants had no knowledge of any reduction of the capital stock until after the bank assigned.

It is nowhere alleged or shown by the bill that at the time of the transactions complained of the bank was insolvent, or that the directors, in passing and acting under the resolution of January, 1894, had in contemplation the occurrence of the bank's insolvency, or of the assignment which occurred more than four years later.

Applying the principles stated in the authorities above referred to, it will be seen that the facts alleged as effecting a reduction of the capital stock of the bank do not show there was in fact a reduction of the stock, or that the acceptance of shares held by defendant and others in payment of debts due the bank involved any illegality, or operated in any way to defraud or even injure complainants.

The bill is without equity. The decree appealed from will be reversed, and a decree will be here rendered dismissing the bill. Reversed and rendered.

RIGHT TO APPLY DEPOSIT TO PAYMENT OF NOTE—DIRECTION TO PAY DEPOSIT OVER TO RECEIVER.

United States Circuit Court of Appeals, Second Circuit, July 1, 1903.

WHEATON vs. DAILY TELEGRAPH COMPANY.

Where a bank to which an insolvent corporation was indebted was not a party to an action by a stockholder for the administration of the corporation's assets, it was error for the court to direct the bank to pay over to the Receiver of the corporation the amount of the corporation's deposits with the bank pending a determination of the bank's rights to set off such deposit against the corporation's debt.

Where at the time of the appointment of a Receiver for a corporation it was indebted to a bank in a sum largely exceeding the amount of the corporation's deposit, the bank was entitled to set off such deposit against the corporation's indebtedness to it.

Appeal from the Circuit Court of the United States for the Southern District of New York.

Before Wallace, Townsend, and Coxe, Circuit Judges.

WALLACE, C.J.: This is an appeal by the New Amsterdam National Bank from an order made in the above-entitled cause requiring it to pay over to the Receiver of the defendant, the Daily Telegraph Company, a sum of money alleged to be the balance of a deposit account. The Receiver was appointed in an equity suit brought by a stockholder of the Daily Telegraph Company in behalf of all the stockholders and creditors of the company in behalf of all the stockholders and creditors of the company to administer its assets. The company had kept a bank account with the New Amsterdam National Bank, and at the time when the suit was commenced the account showed a balance in its favor of about \$2,000 arising from the moneys it had deposited over those it had drawn out. The bank alleged that at the time it held and owned a note of the company for \$6,500, which was then due and

payable. It refused to pay the balance of the deposit account to the Receiver, upon the contention that it was entitled to apply that balance towards the payment of the note. It resisted the application for the order, as well in respect to the nature of the remedy invoked as upon the merits of the Receiver's claim. The order requiring it to pay over to the Receiver seems to have proceeded upon the theory that primarily the Receiver was entitled to the custody of the fund, and if it should ultimately appear that the bank was entitled to retain the amount, either as a payment or as a set-off against its note, the court would make restitution.

We think this an erroneous disposition of the matter. In an action like the present, to marshal and administer the assets of an insolvent corporation, it is optional with the plaintiff to join as parties defendant such persons as claim an adverse interest in assets in their possession alleged to belong to the corporation; and when this has been done, and a Receiver has been appointed, the court upon hearing the parties will determine whether the custody of such assets shall, pending final decree, remain unchanged, or whether it shall be transferred to the Receiver.

Such a determination does not adjudicate or affect the ultimate rights of the parties; it extends only to the conservation of the assets until these rights are finally ascertained. Whether their custody shall be changed rests in the sound discretion of the court. If it should appear that the adverse claimants have a clear title to the assets, it would be an abuse of discretion to direct the custody to be surrendered to the Receiver, and especially when because of the paucity of other assets they might become subjected to a lien for the expenses of administration. If, when the Receiver is appointed, it is found that property alleged to belong to the corporation is in the possession of third persons who claim adverse title, and who have not been made parties to the action, the Receiver cannot interfere with their possession. They are entitled to their day in court, and the Receiver must proceed by suit in the ordinary way to try his right to the property, or the plaintiff must bring them in as parties to the action, and apply to have a receivership extended to the property in their hands.

The power of a court to proceed summarily against a person who has disturbed the custody of its Receiver, and which is usually exercised by an order for restitution upon the application of the Receiver or of the plaintiff in the action, and by punishment for contempt upon refusal to comply with the order, is undoubted; but this exercise of the authority of the court to protect its own possession is not to be confounded with the exercise of jurisdiction over persons claiming adverse rights in property which has never been in the custody of the court.

As the New Amsterdam National Bank has never had its day in court, the order of the court below was unauthorized, and could not support a proceeding for contempt. (*Parker vs. Browning*, 8 Paige, 388; *Albany City Bank vs. Schermerhorn*, 9 Paige, 372; *Searles vs. Railway Co.* 2 Woods, 621, Fed. Cas. No. 12,586; *Thompson vs. Smith*, 1 Dill. 458, Fed. Cas. No. 13,977; *Terrell vs. Allison*, 21 Wall. 289, 292; *Howard vs. Railway Co.* 101 U. S. 837, 848.)

Even if the bank had been a party to the suit, we think it would have been an erroneous exercise of judicial discretion to require it to pay over the money to the Receiver. The facts alleged by the bank in opposition to the

application of the Receiver were practically undisputed. If they are true it had a right to retain the money, and the probability of a final decree to the contrary was too remote to justify wresting the fund from the bank pending a final decree, and possibly subjecting it to a lien for expenses.

The order is reversed, with costs.

INSOLVENT BANK—AMOUNT OF DIVIDENDS—WHERE BANK HOLDS COLLATERAL.

Supreme Court of Rhode Island, July 1, 1903.

In re BURKE.

Under the statute of Rhode Island, applicable to insolvent banks, a secured creditor is entitled to dividends on the full amount of his claim.

But the creditor is entitled to dividends on the principal indebtedness only, and cannot claim a dividend on the liability of the insolvent bank as indorser of the paper held as collateral.

STINESS, C. J.: As to the claim of the Bowling Green Trust Company of New York, the question is settled by *Allen vs. Danielson*, 15 R. I. 480, 8 Atl. 705, and *Greene vs. Jackson Bank*, 18 R. I. 779, which held that the settled rule in equity allows dividends to a secured creditor upon the full amount of his claim; the security being regarded as something collateral, which does not reduce the debt, but only secures the creditor *pro tanto* in case the debtor or his estate cannot pay the debt in full. (See, also, *People vs. Remington*, 121 N. Y. 328; *Third Nat. Bank vs. Haug* [Mich. 1890] 47 N. W. 33; *Assignment of Meyer* [Wis.] 48 N. W. 55; *Chemical Bank vs. Armstrong*, 59 Fed. 372, 8 C. C. A. 155.)

The Receiver argues that these decisions should not apply, because since then a more comprehensive insolvency law was enacted in this State (Gen. Laws 1896, c. 274), which, in section 29, provides that claims of secured creditors may be allowed to the extent of the debt due over and above the value of the securities. We think that this statute is not controlling in this case, for two reasons: (1) This proceeding is not under the insolvency law, but it is a special statutory proceeding under Gen. Laws 1896, c. 178, § 42 *et seq.* Under Gen. Laws 1896, c. 240, § 1, "statutory proceedings, so prescribed by statute, shall follow the course of equity so far as the same is applicable." Gen. Laws 1896, c. 178, § 45, provides, referring to the appellate division of the Supreme Court: "Said court shall have the same power and authority over the Receiver, his acts and accounts, as is exercised by courts of equity in like cases." It also provides for injunctions in the proceedings. These provisions are equivalent to prescribing that the proceedings shall follow the course of equity. If so, it is also equivalent to prescribing that the acts of the Receiver shall follow the equity, and not the insolvency, rule. The equity rule, as above stated, gives the creditor the right to a dividend on his debt. The chapter also directs the Receiver to pay the debts ratably, if there shall not be sufficient to pay the whole, and not, as in the insolvency law, to pay on the balance over securities. In *Cook County Bank vs. United States*, 107 U. S. 445, it was held that a bankrupt law had no application to the winding up of a National bank under a separate statute. (2) Since the insolvency law was passed, a National bankrupt act has been adopted by Congress, the effect of which, as stated in *Matter of Reynolds*, 8 R. I. 485, 5 Am. Rep. 615, suspends

the State legislation on the same subject. If the statute, as a whole, cannot be applied to a case within the purview of the bankrupt act, we see no reason why certain provisions should be picked out of it, and applied to a case under another statute. We are therefore of opinion that the insolvency law has no application to the case at bar, and that the rule in equity as to distribution should be followed. Under this rule the Bowling Green Company is entitled to dividends on its entire debt.

The same rule also applies to the claim of the Western National Bank. This bank holds the note of the insolvent bank, the Merchants' Bank of Newport, for \$9,500, and certain other notes transferred to it, as collateral, by the indorsement of the insolvent bank. It claims that the indorsement constitutes a debt, the notes not having been paid. The question is whether it is entitled to dividends on this liability as well as upon the original debt.

We are referred to no cases, and we know of none, which sustain the proposition that a creditor may have dividends on a collateral as well as an original debt; nor can we see, on principle, why it should be so. It is true that the insolvent bank is, in a sense, a debtor by reason of its indorsement; but the debt is the primary obligation, and the collateral is secondary. The bank does not owe two debts, but one. It is on this one debt that it is entitled to its dividend. One does not increase his debt by giving security, although the form of transferring the security may be such as to give a right of action on it. It is still a subsidiary and conditional liability. If an insolvent owed a debt for goods, and gave a note for the amount, that would not discharge the debt, without special agreement. (*Wheeler vs. Schroeder*, 4 R. I. 383; *Wilbur vs. Jernegan*, 11 R. I. 113; *Nightingale vs. Chafee*, 11 R. I. 609.) The creditor might sue upon either, yet no one would claim that he would be entitled to a dividend on both because he had a cause of action on each. To do so would be grossly inequitable to other creditors, by giving him a double dividend for one debt; yet it would not be different, in substance, from the claim here made for a dividend on the collateral notes. A creditor is entitled to a dividend only on his debt. If he holds collateral, he may also realize from it what he can, but that is not a debt, within the meaning of the rule in equity, nor one on which he should take dividends to the loss of other creditors. We find these views fully sustained by *Third Nat. Bank vs. Eastern R. R. Co.* 122 Mass. 240, and *First Nat. Bank vs. Williamson* (Tenn. Ch. App. 1895) 35 S. W. 573.

We are of opinion that the Western National Bank is entitled to a dividend only on its debt of \$9,500.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

BANKER—CHECK—CONVERSION—CROSSED CHECK PAID INTO CUSTOMER'S ACCOUNT—FORGED INDORSEMENT—CREDIT GIVEN TO CUSTOMER BEFORE CHECK CLEARED—DRAFT BY ONE BRANCH OF BANK ON ANOTHER—BILLS OF EXCHANGE ACT, 1890, SEC. 81.

CAPITAL AND COUNTIES BANK LIMITED AND GORDON vs. LONDON CITY AND MIDLAND BANK LIMITED, *et al.*

STATEMENT OF FACTS: The facts material to the first appeal are taken in substance from Lord Lindley's judgment:

Gordon, who traded as Gordon & Munro, was the holder for value of

crossed checks, drawn by various persons on various banks, and payable to Gordon & Munro or order. Gordon had a clerk named Jones, who forged indorsements in the name of Gordon & Munro on these checks, and then took or sent them to the Capital and Counties Bank, where he had an account. Jones also indorsed them in his own name, and the bank credited his account with the amounts, and he drew on his account whilst the amounts of the checks so paid in stood to his credit. The bank manager dealt in this matter with perfect *bona fides* and without negligence, having no suspicion that anything was wrong. He said he held the checks until he received payment for Jones and credited his account with the proceeds, and that he received the checks in the ordinary course of banking business, and that all the checks were collected for Jones.

The bank manager was not cross-examined on these answers; but there is some ambiguity about them. The documents and accounts, however, show exactly what was done, and it is plain that the bank did not wait until the checks paid in by Jones had been passed through the clearing-house before their amounts were placed to his credit. They were placed to his credit when he paid the checks in; and he was allowed to draw upon his account increased by them as above stated. None of the checks were ever returned to the bank; they were all duly honored, and the appellant bank received their amounts in due course from the banks on which they were respectively drawn. Afterwards Jones' frauds were discovered, and he was prosecuted and convicted. Gordon, who had been robbed of the checks and wrongfully deprived of the money represented by them, brought an action against the bank to recover that money which the bank had received under the circumstances above described.

The two actions were tried by Bucknill, J., with a jury. The jury found in each case that the banks had not been guilty of negligence in taking the checks. All other questions were left to the learned judge, it being admitted that the banks had acted in good faith. Bucknill, J., entered judgment for the defendants on the main question in both appeals, and for the plaintiff as to class 1 in the second appeal.

The Court of Appeal (Collins, M. R., Stirling and Mathew L. JJ.) entered judgment for the plaintiff in the first appeal for the amount claimed; and in the second appeal for the plaintiff as to classes 3, 6, and 8. Against these decisions so far as they were adverse to them, the banks respectively brought the two present appeals.

The following is a copy of sec. 81:

"Where a bank, in good faith and without negligence, receives for a customer payment of a check crossed generally or specially to itself, and the customer has no title, or a defective title thereto, the bank shall not incur any liability to the true owner of the check by reason only of having received such payment."

JUDGMENT (LORD MACNAGHTEN): My Lords, I am sure I need not trouble the House by recounting in detail the facts of these cases or describing the classes into which, for the sake of convenience, the drafts forming the subject of this litigation have been divided. It will be enough, I think, to remind your Lordships that all the drafts now in question were stolen from the respondent, Gordon, trading in Birmingham under the style of Gordon & Munro, by a man called Jones, who was Gordon's ledger clerk for about ten

years. Jones himself lived in Sparbrook. Unknown to his employer, he carried on a small business of his own as a coffin furniture maker in Birmingham. In the name of the firm under which he traded, he kept an account with the Birmingham branch of the Capital and Counties Bank, and also with the Sparbrook branch of the London City and Midland Bank. To one or the other of these accounts Jones paid all the drafts which he stole from Gordon, forging the necessary indorsement when the draft was payable to order on demand, as was generally the case. When the fraud was discovered and Jones had been prosecuted and convicted, Gordon brought an action against each of the two banks for conversion of such of the stolen drafts as could be traced to its hands, with a count in the alternative for money had and received to his use.

The actions came on to be tried before Bucknill, J., and a special jury. The only question left to the jury was the question of negligence. The result of the findings of the jury on this point was in favor of the banks.

All other questions were reserved for the judge. On the principal matter in controversy, Bucknill, J., gave judgment for the banks. This decision, however, was reversed by the Court of Appeal.

The main question raised in these two appeals, and the most important as regards amount, related to crossed checks payable to order on demand drawn on banks other than the bank which was being sued. It is not disputed now that as regards these checks there can be no defence, unless protection is afforded by sec. 81 of the Bills of Exchange Act, 1890, which declares that "where a banker in good faith and without negligence receives payment for a customer of a check crossed generally or specially to himself, and the customer has no title or a defective title thereto, the banker shall not incur any liability to the true owner by reason only of having received payment."

Now it is admitted that each of the two banks acted in good faith. The suggestion of negligence on their part has been negatived by the findings of the jury. It cannot be denied that Jones was a customer within the meaning of the section. The only question therefore, is: Did the banks receive payment of these checks for their customer? If they did, it is obvious that they are relieved from any liability which, perhaps, might otherwise attach to some preliminary action on their part taken in view and anticipation of receiving payment. The section would be nugatory—it would be worse than nugatory—it would be a mere trap, if the immunity conferred in respect of receipt of payment and in terms confined to such receipt, did not extend to cover every step taken in the ordinary course of business, and intended to lead up to that result.

The character in which a bank receives payment of a check is, as has been already said in this House, a question of fact. (1) To my mind, it would have been more satisfactory if the jury, under proper directions from the judge, had answered this question themselves. It was, however, withdrawn from their consideration.

The appeal was argued very fully and very ably by the learned counsel for the appellants, and especially by Mr. Cohen. And I must say that I was a good deal impressed by his argument in opening. At first sight there is not much difference between the case of a bank which at once credits a customer with the face value of a check paid in to his account and allows him to draw

against his credit balance thus increased, and the case of a bank, which without crediting the customer with the value of a check before collection, allows him to overdraw his account in view of the anticipated credit. In each case it was said the credit is only provisional, whether entered in the customer's account or not. In each case it was said payment received is received for the customer. And in a sense that is true. Then it was urged with some force that practically the only result of upholding the decision under appeal will be to compel some bankers to keep a double set of books where now only one set is required, and thus to impose upon bankers a good deal of extra and perhaps unnecessary trouble. But the protection conferred by sec. 81 concerned only a banker who receives payment for a customer—that is, who receives payment as a mere agent for collection. It follows, I think, that if bankers do more than act as such agents, they are not within the protection of the section. It is well settled that if a banker before collection credits a customer with the face value of a check paid into his account, the banker becomes holder for value of the check. It is impossible, I think, to say that a banker is merely receiving payment for his customer and a mere agent for collection when he receives payment of a check of which he is the holder for value.

So long as a bank has for its customers only persons of position with whose circumstances the manager is fully acquainted, as is not unfrequently the case in country districts, where one bank by arrangement with its competitors has a monopoly, it matters little whether the bank at once credits a customer with the face value of checks paid into his account or waits until collection. The bank only looks to its own customers. But Parliament may have thought that in the increase of banking business likely to arise in consequence of the legislation with respect to crossed checks, and the competition sure to follow, it would not be improbable that small accounts might be opened with banks by persons of little or no credit, and that it might be a dangerous thing to extend protection to bankers dealing with crossed checks in all cases, whether they acted simply as agents for collection or in a different character. Or possibly at the time bankers asked for no further protection than that which sec. 81 purports to confer. However that may be your Lordships have only to construe the language of sec. 81 in connection with the language of the other sections of the act bearing on the point.

It seems to me, my Lords, that the decision of the Court of Appeal on this question, which is the main question involved, is perfectly right. In the judgments of the learned judges of the Court of Appeal, and especially in the judgment of Collins, M. R., I find the subject dealt with so completely both as regards the history of the legislation and the principles and decisions applicable to the case that, speaking for myself, I think it would be a waste of time to do more than say that I accept their view. It appears to me that the Master of the Rolls has accurately summed up the whole case. "The protection afforded by sec. 81 must," he said (1), "be limited to that which is necessary for the performance of the duty which by the legislation as to crossed checks was imposed on bankers. If bankers deal with crossed checks in the ordinary way in which bankers dealt with checks before the legislation as to crossed checks and in which they deal with checks other than crossed checks at the present time, namely, by treating them as cash, and upon receipt of them at once crediting the customer with the amount of them in the

ordinary way instead of making themselves a mere conduit pipe for conveying the check to the bank on which it is drawn and receiving the money from that bank for their customer, I think they are collecting the money, not merely for their customer, but chiefly for themselves, and therefore are not protected by sec. 81."

On all other questions that have been raised I agree with the Court of Appeal except as regards the small drafts of which class 3 is composed. On this point I agree with my noble and learned friend Lord Lindley, whose opinion I have had the advantage of reading. It is a very small point and ought not, I think, to make any difference as regards the cost of the appeal.

Subject, therefore, to a slight variation as regards these drafts, amounting to £32, 15s. 8d., I move your Lordships that the decrees be affirmed and the appeals dismissed with costs.

CONTRACT—PERFORMANCE PREVENTED BY ACCIDENT—CHECK GIVEN IN PART PAYMENT BEFORE PERFORMANCE WAS RENDERED IMPOSSIBLE—PAYMENT OF CHECK STOPPED—RIGHT TO RECOVER ON CHECK.

ELLIOTT vs. CRUTCHLEY (1803, 2 King's Bench, p. 476).

STATEMENT OF FACTS: This was an action brought upon a check given by the defendants in June, 1902. The plaintiff is a caterer with whom the defendants had entered into an agreement to supply them with refreshments on a steamer chartered for the purpose of witnessing a naval review. The agreement provided for the payment to the plaintiff of \$1,500 on June 23, and on that date a check for this sum was given to the plaintiff. On June 24 it became known that the naval review would not be held, and the defendants stopped payment of their check. A letter from the defendants stipulated that in the event of the cancellation of the review before any expense was incurred by the contractor, there should be no liability on the part of the defendants. On the evidence the trial judge found that no expense had been incurred by the contractor within the meaning of the contract.

JUDGMENT (RIDLEY): The principle of law applicable has been laid in several cases, and appears to be that where performance becomes impossible from some cause for which neither party is responsible, and the party sued has not contracted or warranted that the event, the non-occurrence of which has caused the contract to be impossible of performance, shall take place, then the parties are excused from further performance of the contract. In the present case, if the money had been paid in cash, it must have remained in the plaintiff's hands. But the check, which was sent to the plaintiff, having been stopped, what is the position of the parties? According to the cases, it is as though it had never been given. The debt remains in such a case as though there had been no check, and the party to whom it was sent is remitted to his original right on the consideration for the check. Adopting this here, if each party is to rest in the position in which he was found when the event occurred, the defendants are entitled to succeed. Their right to do so depends on the accident that the check was not presented by the plaintiff; but it is none the less their right, and it is in accordance with the merits of the cases, for the money was to be paid on account of the refreshments to be supplied, and the plaintiff has expended nothing on that account, and therefore has done nothing to earn it.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in banking law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

Editor Bankers' Magazine:

ST. CLOUD, Minn., October 25, 1908.

SIR: A Milling Company of Indiana draws a draft for \$500 with bill of lading attached, for flour sold parties in Washington, N. C., and deposits the draft in their home bank for collection. This bank sends the draft to Louisville, Ky. L sends it to Baltimore, Md. B sends it to Newbern, N. C. (a point seventy-five miles beyond destination of shipment). Newbern sends it to Washington bank who makes the collection from consignee. The Washington bank remits to Newbern. The Newbern bank fails before Baltimore received payment.

Who should stand the loss? Would it alter the case if drawer had deposited the draft in home bank and received credit therefor?

W. W. SMITH, *Cashier.*

Answer.—The Supreme Court of Minnesota, following the English and New York decisions, has held that a collecting bank is responsible for the neglect or default of the correspondent or other agent to which it transmits the paper. (*Streissguth vs. National American Bank*, 43 Minn. 50.) And the same rule prevails in the Federal courts. (*Exchange Nat. Bank vs. Third Nat. Bank*, 112 U. S. 276.) Under this rule the liability of the collecting bank extends to any failure of the correspondent to pay over the proceeds of the collection. The leading case upon the subject is the English case of *Mackersy vs. Ramsay* (9 Cl. and F. 818). There the collection had been made by the house in Calcutta, which was acting as the agent of Coutts & Co., the London correspondent of Ramsay & Co., but the money was lost by the subsequent failure of the Calcutta firm. It was held by the House of Lords that Ramsay & Co. were liable to their customer for the amount. In the course of his opinion in this case Lord Cottenham said: "I cannot distinguish this case from the ordinary transactions between parties having accounts between them. If I send to my bankers a bill or draft upon another banker in London, I do not expect that they will themselves go and receive the amount and pay me the proceeds, but they will send a clerk in the course of the day to the clearing-house and settle the balances in which my bill or draft will form one item. If such clerk, instead of returning to the bankers with the balance should abscond with it, can my bankers refuse to credit me with the amount? certainly not. If the bill had been drawn upon a person in York, the case would have been the same, although, instead of the bankers employing a clerk to receive the amount, they would probably employ their correspondent at York to do so; and if such correspondent received the amount, am I to be refused credit because he afterward became bankrupt while in debt to my bankers? If the balance were not in favor of my bankers, the question would not arise, so that my title to the credit would depend upon the state of the account between my bankers and their correspondent. The amount in money was received by the correspondent of my bankers at York; as between me and them, it was received by them, and nothing which might subsequently take place could deprive me of the right to have credit with them for the amount." (See, also, *Simpson vs. Walby*, 63 Mich. 451; *Power vs. First Nat. Bank*, 6 Mont. 276.)

Under this rule, the Baltimore bank would be liable to the Louisville bank, which in turn would be liable over to the Indiana bank, and the last-named

bank would be liable to its customer; the Milling Company must look directly to the Indiana bank, and has no remedy against any of the other banks. (*Hoover vs. Wise*, 91 U. S. 308; *Montgomery County Bank vs. Albany City Bank*, 7 N. Y. 459.)

In some other States a different rule prevails, and it is there held that where the employment of a correspondent or other agent is necessary or customary, the duty of the collecting bank is fully discharged if it exercises reasonable care in the selection of such correspondent or agent, and that when the paper has been duly transmitted with the necessary instructions to a suitable agent at the place of payment, the transmitting bank will not be liable for any neglect or default of such agent. (*Lawrence vs. Stonington Bank*, 6 Conn. 521; *East Haddam Bank vs. Scovil*, 12 Conn. 303; *Waterloo Milling Co. vs. Kuenster*, 158 Ill. 259, 58 Ill. App. 61; *Anderson vs. Alton Nat. Bank*, 59 Ill. App. 587; *Guelich vs. National State Bank*, 56 Iowa, 434; *Lindborg Bank vs. Ober*, 31 Kan. 599; *Jackson vs. Union Bank*, 6 Har. and J. [Md.] 146; *Citizens' Bank vs. Howell*, 8 Md. 530; *Fabens vs. Mercantile Bank*, 23 Pick. [Mass.] 330; *Dorchester, etc. Bank vs. New England Bank*, 1 Cush. [Mass.] 177; *Louisville Third Nat. Bank vs. Sprague*, 34 Neb. 318; *Planters, etc. Nat. Bank vs. Wilmington First Nat. Bank*, 75 N. C. 534; *Columbia Second Nat. Bank vs. Cummings*, 89 Tenn. 609; *Sahlien vs. Lonoke Bank*, 90 Tenn. 221; *Stacy vs. Dane County Bank*, 12 Wis. 629.) This is the rule adopted in Maryland. (*Citizens' Bank vs. Howell*, 8 Md. 530; *Jackson vs. Union Bank*, 6 Har. and J. 146.) The question does not appear to have been decided in either Indiana or Kentucky. The first-mentioned rule is also frequently modified by an express arrangement made between the bank and its depositors.

Editor Bankers' Magazine :

LINCOLN, Neb., Oct. 22, 1908.

SIR: Will you kindly answer through your MAGAZINE and advise whether in your opinion the clauses usually incorporated in promissory notes are binding, and if any part is not binding, which it is. We should like to have this answer as in reference particularly to the laws, practice and decisions of the courts of our own State as well as the decisions of courts in general.

"The makers, endorsers and guarantors of this note hereby severally waive presentment for payment, notice of non-payment, protest and notice of protest, and diligence in bringing suit against any party thereto, and sureties consent that the time of payment may be extended without notice thereof."

If the above clause is valid and binding, will it also hold any parties who have endorsed note on back, or will it simply hold those who have signed on face as sureties or endorsers?

It is also held by some parties that the "married woman's" clause as noted below, and as in common use here, is not binding, especially if it can be shown that the signature of the woman was simply for accommodation. Will you kindly answer as to that clause also?

"And I —, being a married woman, do execute this note with especial reference to, upon faith and credit of, and with the intention to charge my individual property for its payment."

NOTE CLAUSE.

Answer.—(1) It has been held in a number of cases that a waiver of this character embodied in the instrument is binding upon all persons who place their signature thereon, whether upon the front or back. (*Phillips vs. Diplo*, 93 Iowa, 35; *Smith vs. Pickham*, 8 Tex. Civ. App. 326; *Bryant vs. Merchants' Bank*, 8 Bush. 43; *Lowry vs. Steele*, 27 Ind. 168; *Farmers' Bank of Kentucky vs. Ewing*, 78 Ky. 264; *Bryant vs. Taylor*, 19 Minn. 396.) We do not find that this precise question has ever been decided in Nebraska.

(2) It seems to be well established in Nebraska that the notes of a married woman are binding upon her when made with reference to her separate property, or upon the faith or credit thereof. (*Godfrey vs. Megahan*, 38 Neb. 748; *Grand Island Banking Co. vs. Wright*, 53 Neb. 574.) And even though there be no clause in the note to this effect, her purpose to so charge her separate property may be shown by other evidence. (*Godfrey vs. Megahan*, 38 Neb. 748; *Grand Island Banking Co. vs. Wright*, 53 Neb. 574.) So it is well settled in that State that a married woman may contract as surety for her husband. (*Smith vs. Spaulding*, 40 Neb. 339.) And that where as such surety she signs a note containing a clause pledging her separate estate, the note is binding upon her. (*Briggs vs. First Nat. Bank*, 41 Neb. 17.) The loan to her husband is a sufficient consideration to bind her although she personally receives no consideration. (*Id.*) So an extension of the time of payment granted to her husband is a sufficient consideration to support her contract. (*Smith vs. Spaulding*, 40 Neb. 339.) We do not see, therefore, why the clause referred to in the question is not effectual, even though the signature of the married woman be for accommodation. But the note is not enforceable against the after-acquired property of a married woman; it can be enforced only against the property of which she was possessed at the date of the contract. (*Kocher vs. Carnell*, 59 Neb. 315.)

American Institute of Bank Clerks.

Editor Bankers' Magazine:

SIR: Assuming from what I have seen of your MAGAZINE that you desire to treat all subjects fairly, I wish to call your attention to an article in your October number bearing upon the convention of the American Institute of Bank Clerks. In this article you make the following statement: "There was, it is said, some manifestation of a desire to cut loose from the American Bankers' Association and run the Institute of Bank Clerks as an independent affair."

As an irresponsible newspaper did publish something of the kind, the phrase, "it is said," saves the statement from being an absolute untruth. It does not, however, prevent it from conveying a false impression which does great injustice to all concerned in the deliberations of the convention. I was chairman of the committee on organization and attended every meeting of that body. A resolution was introduced at the first meeting of this committee offering a plan of organization. This plan contemplated relieving the board of trustees representing the American Bankers' Association of some of the irksome detail work necessary to run the institute and put it upon chapter members. It also expressly stipulated that the men appointed for this purpose should be subject to the will of the board of trustees of the American Bankers' Association, and should keep them informed of their actions through the secretary of the board. No power was delegated to the chapter representatives which was not first to be submitted to the board of trustees for their approval. The members of the committee were unanimous in their desire to conform with the wishes of the American Bankers' Association in every detail, and rather than recommend the resolution to the convention, they voted to refer it to the president of the board of trustees of the American Bankers' Association before passing upon it themselves. This was done, and the recommendation of the president in regard to the matter was carried out.

In addition I desire to say that it is my firm conviction that every delegate to the Cleveland convention desired a closer affiliation with the American Bankers' Association if such a condition was possible. That is only a personal opinion, but the opportunities for forming that opinion were of the best.

Assuring you that the action of the American Bankers' Association in organizing the American Institute of Bank Clerks and their liberality in carrying it on are thoroughly appreciated by the members of the institute, I am, very truly yours,

FRED. I. KENT.

CHICAGO, Oct. 24.

Hon. LYMAN J. GAGE, Ex-Secretary of the Treasury
President United States Trust Company, New York.

UNITED STATES TRUST COMPANY, OF NEW YORK.

FIFTIETH ANNIVERSARY OF THE FOUNDING OF THE COMPANY.

The United States Trust Company, of New York, was the first company organized in the United States to transact exclusively the business of a trust company. Its charter was the basis of all special charters afterwards granted to trust companies in the State of New York, as well as of the general law for the incorporation of trust companies, adopted in 1887.

The degree of success the company has attained is witnessed by the fact that the deposits in trust on June 30, 1903, amounted to \$61,790,595.46, while the entire resources footed up \$76,917,653.58. No other company in the United States, doing a purely trust company business, can show figures equal to these. Its capital, surplus and undivided earnings aggregate over \$14,000,000. But the company has not only been a success from the shareholders' standpoint, in earning dividends and accumulating a surplus, but it has rendered efficient service to the public, having distributed over \$30,000,000 in the way of interest on the funds entrusted to its keeping.

The United States Trust Company was incorporated by special act of the Legislature, April 12, 1853. Its incorporators included Peter Cooper, John J. Phelps, Erastus Corning, Shepherd Knapp, Wilson G. Hunt, Royal Phelps, John J. Cisco, Charles E. Bill, Gerard Stuyvesant and Jacob Harsen. These men have all passed away, but the company remains as a monument to their foresight and wisdom.

On June 10, 1853, the board of trustees became duly organized. John A. Stewart was appointed Secretary. At a meeting of the board held June 14, 1853, Joseph Lawrence was elected President. Owing to failing health, Mr. Lawrence resigned in May, 1865, and John A. Stewart was elected President. The present year marks the fiftieth of Mr. Stewart's close connection with the affairs of the company. Resigning his office a few months since, he was appointed Chairman of the Board of Trustees, so that while relieved from arduous and confining service, the company retains the benefits of his knowledge and counsel.

On the resignation of Mr. Stewart he was succeeded as President by Hon. Lyman J. Gage, who was for many years Cashier, and later President, of the First National Bank, of Chicago, and ex-Secretary of the Treasury.

The other officers are: First Vice-President, D. Willis James; Second Vice-President, James S. Clark; Secretary, H. L. Thornell; Assistant Secretary, L. G. Hampton.

Board of Trustees: John A. Stewart, Chairman; Samuel Sloan, D. Willis James, John Harsen Rhoades, Anson Phelps Stokes, John Crosby Brown, Edward Cooper, W. Bayard Cutting, Charles S. Smith, William Rockefeller, Alexander E. Orr, William H. Macy, Jr., William D. Sloane, Gustav H. Schwab, Frank Lyman, George F. Viotor, James Stillman, John Claflin, John J. Phelps, John S. Kennedy, D. O. Mills, Lewis Cass Ledyard, Marshall Field, Lyman J. Gage.

The United States Trust Company rendered effective service to the Government in providing funds to aid in carrying on the war for the Union, its then Secretary, Mr. John A. Stewart, at the earnest request of President Lincoln, accepting appointment as Assistant Treasurer at New York from 1864 to 1865. In the several financial crises occurring from time to time the company has been foremost in the work of sustaining public credit.

The United States Trust Company is typical of the best of such corporations, and the great success it has achieved is a strong tribute to the wisdom of its founders and the continuous fidelity and capacity of its management.

THE LABOR PROBLEM.

[From the annual address of President I. E. Knisely, delivered before the annual convention of the Ohio Bankers' Association at Columbus, Ohio, September 23.]

There are other questions the banker should be interested in, and none more important than the labor problem. Little notice or interest has been taken by them in this matter, yet they can all see how labor troubles affect their business, interfere with the use of money and deplete deposits.

These conflicts between labor and capital are assuming larger proportions than ever. The forces on both sides are lining up with greater determination; there has been almost a craze for organizing labor unions in the last few years, and now the manufacturers are organizing to oppose them, and not only manufacturers but in other lines of business the same steps are being taken.

While we are at loggerheads about financial questions, we are neglecting our preparations for taking a hand in the settlement of these labor questions. The employer and the laborer are both customers of the bank, while the banks represent capital it is not true that they are on the side of capital in these controversies. They are not employers in the sense that manufacturers are; they have no differences with their help. The capital of the banks is owned by the stockholders, but the bulk of the capital they represent is deposits, and these come from both employers and laborers. The Savings banks particularly are the depositories of the working people. Then it is not true that the bankers are to be classed with employers in their conflicts with labor unions.

What part shall bankers take in this controversy? They have a right by reason of their own interest, and to protect the investments they make to promote the business in which these struggles arise, to have something to say, and beyond this their relation to both laborer and employer gives them great influence, and they ought to interfere. But let me ask how many bankers have formed definite opinion as to the just rights of the laborers in their dealings with their employers. We ought to have our minds made up, but to do this to the satisfaction of our consciences is a serious work.

When we think of our views twenty-five years ago, or even ten or five years ago, and what we now acknowledge, can we imagine what our opinions will be that many years hence, and when the laborers look back the same number of years, and take account of their condition then and now and find that both they and their employers are better off and that it has not made the employer poorer to help them more, can we find fault with their reasoning?

One of the most eminent and conservative labor leaders in our country, when asked the question, whether the bankers would not be good arbitrators in labor troubles, said "no," and he assigned as a reason that the banker could not put himself in the laborer's place so as to understand his side of the question.

Who and what is the American born laborer? He was taken as a child and put into our free schools, and given at least a fair education. In the same schools he associated with all classes. He was taught that he had the same birthrights—life, liberty and the pursuit of happiness—that could enure to the richest. As he grew up he saw laws made to ameliorate the condition of the working people—laws to protect American labor, made for him, not for the capitalists. That is what we have

done for him, what we have made him. When now he looks at the great buildings where the industries of our country are carried on and the brick and mortar, iron boilers and machinery, he feels that when they were projected the cost of the brick and mortar and machinery were all carefully calculated, and with these the cost of his brain and muscle was calculated in the same as these dead things, and he had no more hope than they in those enterprises, you can understand his feelings.

In some countries the laborer may be content to earn sufficient to give him food to sustain life and clothes to cover his body, but here he wants more, and our education of him is the cause of his wanting more. We have given him capacity to enjoy more, and he is justly entitled to it.

Before bankers can have much influence with labor organizations it will be necessary to come into closer relations. Bankers are not popular with them; they have been regarded as capitalists. The socialistic element has a special hatred for banks. No effort has been made to explain the true relation that ought to exist between them, and there ought to be no hostile feelings. If there is anything in the banking system or business which cannot stand the searchlight of public opinion it ought to be abolished. What ought to be our views? Do bankers approve of labor unions? Who of you, if making a public address, upon the subject, but would say, yes. Some sincerely and some with a mental reservation. But there ought to be no question about it. Labor has the right to organize. Men organize banks; great corporations are formed—these to make money. The labor organizations are for the bettering of the working classes, and have a higher and better object than the other. Do we approve of strikes? No; unhesitatingly, no. And it has become a serious question with the older labor unions, whether a strike ought to be resorted to. We believe workmen may quit their job, may quit in a body, but when they do so they must give their employer the right to fill their places, and they must yield the right to other men to take their places. They have a right to quit if they violate no contract in doing so; if they expect to hold the employer to a contract, they must submit to be bound likewise.

The public has been patient with the abuses of labor organizations, with the interruptions of business, the infractions of the law and the destruction of property, and the lives of citizens. Public opinion when it turns against them will soon make them a mockery.

There is a better method; let the unions be organized upon right principles; let law and public sympathy be their weapons, to be used if the employer is oppressive. These are things for the employer to understand too. His obligations to the employee to-day are not the same as they were twenty years ago. He expects less and exacts less. Not that absolute rights change, but the rights become better adjusted. And there is no difference between the rights of intelligent American born labor and ignorant foreign born labor which we have amongst us. We cannot have a code for the one and a different one for the other.

This question will be adjusted sooner or later. I remarked that labor unions ought to be organized upon sound principles. An association that can have no standing in a court; that cannot be reached by legal process; that has no responsibility in law, is not the kind of organization that commends itself to anybody. There are three parties in case of strikes—the employer, the unions and the public, and in the majority of cases the public determines the result. No general strike will ever win without public sympathy. The aim of labor unions is a noble one.

Labor and capital will never come together through hostile means. There can be no combination of employers that can force labor to come to their terms, and there can be no union strong enough that can force its own terms upon employers. The public won't stand for it. The only method must be an agreement in which both sides have a voice.

GEORGE W. YOUNG.

PRESIDENT UNITED STATES MORTGAGE AND TRUST COMPANY, NEW YORK.

The United States Mortgage and Trust Company has recently moved into its new and more capacious banking rooms in the Mutual Life Building at 55 Cedar street, New York.

Mr. George W. Young is President of the company, and under his able management its paid-in surplus of \$500,000 in 1893 has been augmented by profits, until the surplus and undivided profits now amount to \$3,609,000. This aggregate is exclusive of \$1,790,000, distributed in dividends on its \$2,000,000 paid-in capital.

Mr. Young was born of Scotch-Irish parentage in Jersey City, on July 1, 1864, and attended the public schools of that city, afterwards taking the evening scientific course at Cooper Union.

At the age of thirteen he entered the employ of the law firm of L. & A. Zabriskie as an office boy, and subsequently, for a time, studied law.

Shortly after, he secured a position in the Hudson County Bank, of Jersey City, and when only eighteen was promoted to the position of receiving teller. At this time he successfully passed a competitive examination for a cadetship at West Point, and received his commission from President Arthur; but the death of his father rendered necessary his retaining his position in the bank.

When barely past his majority, he became Secretary and Treasurer of the New Jersey Title Guarantee and Trust Company. At twenty-eight he was elected Second Vice-President and Treasurer of the United States Mortgage Company (now United States Mortgage and Trust Company), and at the age of twenty-nine was chosen its President; commanding recognition at once as not only one of the youngest but one of the most able New York leaders in the world of business and finance.

Mr. Young was instrumental in the formation and successful establishment of The Audit Company of New York, Commercial Trust Company of New Jersey, Jersey City Trust Company, Perth Amboy Trust Company and the Windsor Trust Company; and, in addition to being a director in these and in his own company, serves as a director in the following corporations:

National Bank of Commerce, Acker, Merrill & Condit Co., Anacostia & Potomac River Railroad Co., Atlantic Securities Co., Bayonne Bank, Brightwood Railway Co., Buffalo Hump Mining Co., Casualty Company of America, City & Suburban Homes Co., City & Suburban Railway Co., Clarksburg Fuel Co., Columbia Railway Co., Continental Investment Co., Eastern Steel Company, Empire State-Idaho Mining & Developing Co., Fairmont Coal Co., Federal Mining & Smelting Co., Georgetown & Tennallytown Railway Co., Interborough Rapid Transit Co., Lawyers' Surety Co. of N. Y., Mechanics' Trust Co. of Bayonne, Metropolitan Railway Co., Washington, D. C.; N. J. & Hudson River Railway & Ferry Co., N. Y. Dock Co., Northern N. J. Land Co., O'Rourke Engineering Construction Co., Potomac Electric Power Co., Rapid Transit Subway Construction Co., Registrar & Transfer Co., Somerset Coal Co., Third National Bank, Jersey City, N. J.; Trinity County Gold Mining Co., U. S. Fidelity & Guaranty Co., U. S. Safe Deposit Co., Washington Investment Co., Washington Railway & Electric Co., Washington & Rockville Railroad Co., Wolff National Chemical Co.

Mr. Young is a member of the Country Club of Lakewood, Deal Golf, Downton, Lawyers', Manhattan, Maryland, Metropolitan of Washington, Players', Racquet and Tennis, Riding, and Rockaway Hunting.

In November, 1889, Mr. Young married Miss Natalie Bray, of Jersey City, and their children are Dorothy and George Washington, Jr.

Besides their New York residence, they have a charming summer home, "Oakwood Farm," adjoining the Deal Golf Club at Deal Beach, of which club Mr. Young is president.

GEORGE W. YOUNG

President United States Mortgage and Trust Company, New York.

*THE PRACTICAL WORK OF A BANK.

EMBEZZLEMENTS AND DEFALCATIONS.

III.

In these days of great corporations and combinations of capital the highest types of administrative ability and the most complete systems of accounting are necessary.

The merit of any system lies in its completeness, combined with simplicity. It must cover every point involved; it must avoid any ambiguity or chance for misunderstanding, and it must provide ample means for verifying every item. One of the chief advantages of double-entry bookkeeping consists in its check for proving work by trial balance.

No infallible system of checking nor way of preventing errors has yet been discovered, so the next best thing is to locate the mistakes, eliminate them, and verify the work.

The first default of many a Cashier and bookkeeper came from an unlocated error. After worrying perhaps for half a night, trying to find the difference, a fictitious entry is finally slipped in to make the books balance (for you know they must balance to a cent), and the poor tired man seeks his couch with a whitewashed conscience. Of course this does not make matters right, even with the records, for the genuine accountant will dig up the facts and expose the fraud. But how often is it the case that a clean balance-sheet is scanned in a perfunctory manner and the true facts not developed as they would be by a thorough, conscientious audit. Therefore, for the sake of his future character, as well as present safety, this first step aside from the path of rectitude should not be taken. Like the drink habit, it grows easier. The drunken sot might have been a respected citizen if he had only kept this easy and safe rule, "Do not take the first drink."

Errors are usually made through simple inadvertence and they must be found and corrected, never taken advantage of, no matter how great the temptation.

VARIOUS SAFEGUARDS DESCRIBED.

In order to verify accounts it has been suggested that rotation in office is a good plan. One man might be satisfied with his bookkeeping, when another would detect serious faults in his neighbor's or even in his own on comparison. What one approves another will condemn. In such cases silence is not the remedy, but let the issues be joined till right prevails. This is not so easy as acquiescence, but what is wanted is improvement, the best thing.

Bookkeeping is, presumably, an exact science. Professing perfection, to know it is correct we must have indisputable evidence on every point; a checked bill for every credit; a proper acknowledgment for every debit; a clear statement for every receipt and a signed voucher for every payment.

The man in charge of a business should not only be familiar with its details and require every one kept up, but should also master all the combinations and relations of parts. A staircase may be very elaborate and ornate, but if it does not fit

*A series of articles to be published in competition for prizes aggregating \$1,050, offered by THE BANKERS' MAGAZINE. Publication of these articles was begun in the July, 1901 number, page 18.

into the walls and connect the floors as intended it is no less a failure. So system in business must be complete in whole as well as in detail.

The bank teller's statement must exactly coincide with the exchange, collection, discount and individual books. The Cashier must know that all these accounts have been verified by thorough systematic checking; that the accounts as they appear on the ledgers agree with the customers' books; that the bills discounted account exactly agrees with the total of bills on hand; that cash, stocks, bonds, etc., are carefully counted from time to time and tally with cash account and other assets claimed on statement. Make this not so much as an occasional investigation but as a rule to be conscientiously carried out so that carelessness, which too often becomes criminal, will be avoided.

As to how this revision of business can be best accomplished perhaps no two will agree, but the main points are:

First. It must be honest.

Second. It must be thorough.

Third. It must be ample.

A statement may check up apparently O. K. and pass inspection without criticism and still be false as the prince of darkness himself. It is easy to hide our faults from the eyes of men, therefore honesty in business is the first virtue. To keep honest, we should pray as directed by our Master, "Lead us not into temptation." It should be made easy to do right and difficult to do wrong, hence the importance of a thorough yet simple system. The thread must not be broken, for if you cannot follow it you are lost in the labyrinth, "and the goblins will get you if you don't watch out."

Taking up the balance-sheet, every item must be verified beyond question. Take no unsupported statement on any point, from capital stock on through to cash on hand. Every correspondent bank's account must agree or be reconciled and all differences plainly shown and agreed upon. Deposits and overdraft accounts must coincide with total individual ledger balances, and these be verified by frequent balancing of pass books with acknowledgment of correctness by depositors. If they neglect to bring in books, balance the account anyway and send statement with special request for examination, saying if not heard from promptly account will be presumed to be correct and claims barred.

Collection items are sometimes troublesome to round up, but no investigation is complete that does not cover every point involved, and they must all be accounted for. Official court records must be examined and show status of all judgments and items in litigation.

VALUE OF ANALYTICAL STATEMENTS.

No system is up to date that does not keep up a line of comparative statements, showing relative volumes, profits and losses in the various lines and accounts, so that needed changes can be made, the profitable accounts nursed and the unprofitable doctored or killed off. Attention being specially drawn to any variation from the normal standard, consequent investigation may uncover an ulcer on the body politic.

CHARACTER THE BEST SAFEGUARD.

All this attention to system and detail will not avail against the man who is weak and dishonest and runs off with the bag. Strong moral character is the main element in the trusted employee, agent, clerk or banker. This is often hard to determine. It is not reputation though near akin to it, the latter being the public estimate of the former, so for practical purposes they are almost synonymous. Reputations, like bank statements, are subject to scrutiny and revision in order to verify

characters and conditions. Prove all things; hold fast that which is good; cast out that which is evil.

In testing character it is often unnecessary to go far to condemn the subject and close the incident. If a man lives beyond his own resources or incurs liabilities exceeding his ability to meet, it is evidence sufficient to prove his dishonesty. If he frequents the saloon, race course, gameroom or other places of vice and temptation, it is not reasonable to suppose that he will be scrupulous in business, doing his duty with a clear, pure mind. The whole man, moral, mental and physical, must be kept in true equipoise in order to do good work. Abnormal strains do not strengthen, but weaken. In these days of improved methods and the highest economies, no man or woman should be overworked; all labor should receive its just reward and each one who does his part should have a competence for his needs and a fair surplus for enjoyment. A great temptation to dishonesty is unrequited labor. It excuses theft with the specious plea, "I take only what justly belongs to me." Another temptation is necessity, which knows no law. The parent who hears his child cry for bread would be unnatural not to use any means necessary to save it from starvation. The husband who sees his wife dying for lack of something he is not financially able to provide is sorely tempted to desperate means in order to save her life. Such conditions, however, are abnormal and should be unnecessary. The fact is they are sometimes only imaginary, but should they actually arise, a strong, Christian character will always be able to meet and handle them.

In addition to paying what is due in the fullest sense, a little commendation, if deserved, costs nothing and is generally very pleasant to the recipient. Though the salary has been paid, if done grudgingly or with no manifestation of appreciation, there will naturally be a loss of interest and a slackening of endeavor. Treat a man right, and as a rule, he will treat you right.

As to forms and working details, no set forms or rules will fit every individual case, but keeping the above general principles in mind, the active head of any concern can easily make up his own system on these lines and find profit in so doing.

A. MANHATTAN.

NOTICES OF NEW BOOKS.

RECENT LITERATURE ON INTEREST—A SUPPLEMENT TO "CAPITAL AND INTEREST."—By EUGENE V. BOHM-BAWERK, Austrian Minister of Finance and Honorary Professor of Political Economy in the University of Vienna. Translated by Wm. A. Scott, Ph. D. New York: The Macmillan Co.

This volume deals with theories in regard to interest and labor as an element in the cost of production. Prof. Böhm-Bawerk is a high authority on these subjects. The discussions are extremely technical in character, but are doubtless of interest and value to students of political economy.

MONEY, BANKING AND FINANCE. By ALBERT S. BOLLES, Ph. D., LL.D., Lecturer in the University of Pennsylvania and Haverford College. Cloth, 12mo. 336 pages. Price, \$1.25. New York: American Book Company.

This volume, while designed especially as a text-book for commercial high schools and the commercial courses of colleges, is also suited for the general reader. It is a brief, practical treatise on the theory of money, the usages of banking, and the principles of finance. The author describes the best banking practice of the day, and adds those legal principles which refer to the topics taken up. This book fills a place between treatises on methods of bank bookkeeping and works on the theory and history of money and banking. Dr. Bolles is an authority on the subject, and presents the essential principles in a clear and concise manner.

BANK SAFES AND VAULTS.

Of all the improvements made in bank equipment in late years none are more marked than the advance in the methods of vault and safe construction and the perfection of the materials used in this work. For many years it was a pretty even race between the safe-manufacturer and the burglar, but modern skill in safe-building has practically distanced the ingenuity of the bank depredator. It may be said that any safe may be opened, with enough time and the proper materials at hand, but this does not impair the truth of the assertion that absolute safety has been achieved in the making of safes, considering the limitations of time and circumstances under which attacks upon them must be made.

But the primitive safes in use in many banks, and even some of the most elaborate and supposedly impregnable ones, afford but little real protection to the bank's funds and securities. However formidable some of these safes may appear to the general public, they are confidently, and too often successfully, attacked by the burglar.

There is no part of a bank's equipment to which more careful and intelligent attention should be devoted than to the matter of providing the best safes and vaults. If a bank has not attained to absolute security in this respect, it has neglected one of the principal means of gaining the public confidence. A successful attack on a bank's safes and vaults very naturally discredits the bank in popular estimation. It is well known that many people are led to put their money in banks solely for the safety thereby believed to be assured, not because they expect to use the loaning facilities of the bank. If, therefore, the bank fails in making use of every available safeguard it not only loses in the public esteem but begets a certain feeling of distrust regarding the safety of other banks from the assaults of the evilly-disposed. There are many makes of safes, all claiming superiority; but time and experience have demonstrated the falsity of several of these assumptions.

It is believed, however, that within the practicable limits of an attack upon a bank the Patent Manganese Steel Mob and Burglar Proof Safes manufactured by the Manganese Steel Safe Company, 253 Broadway, New York, are absolutely secure. These safes and vaults, the product of the well known Hibbard Rodman-Ely system, represent the maximum degree of safety which modern mechanical skill has been able to devise. The regard in which the safes manufactured by the Manganese Steel Safe Company are held is shown from the fact that they are to be found in so many institutions and that they were selected only after the exercise of the most rigid scrutiny on the part of experts.

The superior resistance these safes offer to attacks made upon them was recognized at the Paris Exposition, where in competition with the safe manufacturers of the world, the Manganese Steel Safe Company was given the highest award and a gold medal, receiving like honors at the Pan-American Exposition in 1901 and the Charleston, S. C., Exposition in 1902.

BANK NOTES AS A FIRST LIEN ON ASSETS.

[From an address by Hon. Charles N. Fowler, before the Illinois Bankers' Association.]

* * * Another observation made by Mr. Dawes is that a note that is a first lien upon the assets of the bank is a moral wrong. Now, follow me for a minute. A first lien upon the assets of the bank is a moral wrong, but if it is a moral wrong to give any class of creditors, knowingly and publicly, a first lien upon the assets of the bank, it is a moral wrong for a man to give a mortgage on his farm and give that creditor a prior lien.

Now, Mr. Dawes, while he says it is a moral wrong, he praises our present system, which is this—to give the noteholder a first lien by seizing the property immediately and setting it aside. In other words, a thing which in principle is a moral wrong if you do it this afternoon, is all right if you do it this morning.

The next proposition of the gentleman is that we have to take a qualified lien upon the assets of the bank. A qualified lien? What do you do to get this qualified lien? You start a bank, you put into it \$110,000 of capital, and what do you put the capital into the bank for? To secure the depositors, everybody will say. That is your guarantee fund. But you go straight away to Washington, pay \$110,000 for your bonds, bring back \$100,000 of currency, and you have not left a single cent to secure your depositors.

Take another case. A bank is under a State law to-day, it has \$110,000 of capital; it has it all loaned out. Probably it could loan its capital all out because it had no reserve against it. It has loaned all its capital out and it has \$110,000 of deposits put in by some one. The man goes to Washington next morning and he buys \$110,000 of Government bonds. With what? With the \$110,000 of depositors' money. He doesn't have any other. And he takes the depositors' bonds, purchased with the depositors' money, and places them with the Government and comes back with the notes, loans the notes out in the country to this, that and the other man, and we will estimate for the purpose of the morals of the case that he loses every dollar of it. Now, my friends, is there any difference in that proposition and in allowing a bank to issue its notes without taking the depositors' money and buying the bonds to secure the notes? What we propose is simply this, that instead of your putting up bonds to secure these notes, that you shall have a right to issue Cashiers' checks or credit currency, and that these credit notes shall be a prior lien upon what you loaned these notes for, upon the capital and assets of the bank. I say there is absolutely no difference whatever in morals or in practice. He says it is a qualified lien. Why? Because it protects the depositor when you compel the banker to take this capital and go to Washington and buy an unshrinkable asset. Now, follow this unshrinkable asset for a moment, will you, and see that it does not shrink. An unshrinkable asset, and protect the noteholder? No; he don't do it to protect the noteholder, but to protect the depositor for taking away what he had to guarantee his deposit. All the capital which was put up to guarantee the depositor is invested in bonds, Mr. Dawes' unshrinkable asset. The British consols, before the South African war, were selling for 110. They are now selling for ninety. Suppose war would be declared to-morrow between the United States and Great Britain, do you think these bonds would be unshrinkable? A two per cent. bond due, in thirty years, would be worth about eighty-five, wouldn't it? What were these unshrinkable assets worth during the war? Were they worth fifty cents on the dollar? Mr. Dawes said he is in favor of an emergency currency. And it is not a new thing, for he says, we have known what it was from the time of Alexander Hamilton, in this country and abroad. Why, Alexander Hamilton is my champion for credit currency. He drew the charter for the first United States bank and the second charter only copied it. He says he copied the systems of Europe. Alexander Hamilton copied nothing. It was evolved out of the matchless economic brain of Alexander Hamilton.

ADVERTISING PROFITABLE TO BANKS.

VIEWS OF REPRESENTATIVE BANKERS.

At the last annual convention of the Wisconsin Bankers' Association, held at Milwaukee, the "Milwaukee Sentinel" interviewed a number of bankers on the subject of bank advertising, with the following result :

"Soliciting business through the medium of newspaper and other advertising is coming to be a matter of course in every well-regulated banking institution.

That this is true there is no reason to doubt after hearing what representative men in attendance upon the State bankers' conventions have to say on the subject.

Fifteen of them were asked for their opinions on the subject of advertising from the viewpoint of the banker of the present day and not one of the number had aught to say that would be discouraging to the financier who is reaching out through the medium of printers' ink for new business.

ADVERTISING BANKS INCREASE THEIR BUSINESS.

All agreed, in fact, that the banks that advertised got the business, and that no bank lost reputation for conservatism by calling attention properly in the newspaper, financial journal, gazetteers, and other publications to its standing or to what it had to offer in the way of inducement to the depositor.

Charles LeRoy Farrell, Vice-President of the Fort Dearborn National Bank, Chicago, formerly of the Capital National, of Indianapolis, is a most enthusiastic believer in advertising. He is now a member of the executive council of the American Bankers' Association, a position that brings him in close touch with the business of banking in all its phases.

'In 1890,' he said, 'the Capital National had a deposit account of \$1,250,000, when we began a campaign of advertising in banking journals, the newspapers, directories and through personal acquaintances at the conventions of financiers. In about three years the figure rose to \$5,000,000, and most of this we attributed to the fact that we brought ourselves before the people.

There is no denying it, for it is the truth, the bank most heard of or talked about, if a good one, gets the business. The results of advertising to a banker do not come with a jump; they are cumulative. My experience has been that properly handled, bank advertising cannot help but win. The people will never know that you have something to sell unless you tell them of it, and I am certainly an advocate of advertising the advantages offered by my bank, and am advertising them.

The best example of advertising in the banking business that has come under my observation is the Hanover National, of New York. It has pegged away for a number of years, steadily using advertising space in the newspapers, financial journals and other legitimate mediums, until it has placed itself independent of great railroad or other backing, upon a high plane. It is doing a wonderful business and it is doing it because it advertised.'

NO QUESTION ABOUT RESULT.

Mr. Farrell is pursuing the same policy with the Fort Dearborn National that he adopted with the Indiana bank and his friends at the convention say there is no question about the result—he is bound to succeed—he is succeeding.

Ernest C. Brown, Assistant Cashier of the First National Bank, of Minneapolis, said that his bank believed in going after business wherever it could be found and considered newspaper advertising was one of the best ways of reaching a certain class of it. His bank uses the local papers, paying for writeups, and patronizes the financial journals for display advertisements. However, he says he believes in being modest, and as an example produced from his pocket a simple card, 6x8¼ inches, which was issued after the bank had increased its capital \$1,000,000, as follows :

'With a capital of \$2,000,000 and surplus of \$1,250,000, the First National Bank, of Minneapolis, Minn., feels itself to be in a position to take care of any business intrusted to it. Correspondence solicited.'

'We don't believe in big talk or boasting,' said Mr. Brown, 'but have considerable faith in a plain statement of fact contained in our card, which is the only announcement we make.'

G. B. Smith, Assistant Cashier of the Commercial National Bank, of Chicago, said that his institution used the newspapers, magazines and bankers' directories judiciously, soliciting commercial business exclusively. He is a believer in bank advertising and says it pays the Commercial National.

Rollin P. Grant, Cashier of the New York National Exchange Bank, said that he was a believer in bank advertising, and that his bank used the financial papers with great success.

F. E. Williams, Cashier of the Citizens' Bank, of Delavan, Wis., said he believed in bank advertising. 'The business of banking,' he said, 'has undergone a remarkable change in the last few years. Big banks are constantly looking for the business of the small banks. Letters are written on the slightest provocation, and efforts made all the time to get in touch with us. Apparently new business is appreciated more nowadays than it used to be, for the big banks are certainly going after it in earnest. I don't believe that a bank should advertise as if it were selling shoestrings; there is a certain dignity in the business that must be maintained to retain respect and confidence. There is a right way and a wrong way to advertise, whether in using the newspaper or in sending out circulars.'

A. J. Frame and William H. Sleep, both Waukesha bankers, are advocates of the use of printer's ink to secure business for banks, and they practice what they preach. 'We use the local newspapers,' said Mr. Sleep, 'and take space in the directories. We also send out circulars, and in this way keep our bank before the people. I am a firm believer in advertising for a bank.'

Mr. Frame was firmly of the belief that 'a bank not in touch with the people would not succeed,' and it was his opinion that the proper way to keep the relationship pleasant and profitable between the bank and customer or prospective customer was to advertise.

Another Chicago man who has had considerable experience in advertising a bank is Albert S. Boos, Assistant Cashier of the Colonial Trust and Savings Bank. 'We do a lot of advertising,' he said, 'and get good returns, consequently you are talking to an enthusiast. We regard it as one of the absolute necessities of successful banking, and do not know of any kind of advertising that we have tried that does not pay, from the classified to our cards in the elevated trains.

We use the newspaper display columns, classified, and the elevated trains to solicit savings and commercial deposits and to dispose of mortgages and catch the eye of the borrower. We also use circulars. Some bankers would be surprised to know the large sum we spend in a year in advertising, but it pays, and we are satisfied.'

OUT-OF-TOWN COLLECTIONS.

Editor Bankers' Magazine:

SIR: There is probably more friction between the business men and the bank officials of Manhattan over the collection of so-called out-of-town items than over all other matters put together. The trouble begins with the errand boy and the receiving teller over the charge of ten cents on an insignificant check, and extends through bookkeepers and collection clerks up to the heads of firms and bank Presidents. A merchant cannot understand why, with an average balance in the bank of say \$10,000, he should be charged ten cents for the collection of a check on Yonkers, or why it should take two weeks to hear from a draft on Buffalo when a letter reaches there in a few hours.

If a merchant goes to his banker and complains of the charge for collection or the length of time it takes to hear from collection items, he gets no satisfaction and submits as gracefully as possible to the inevitable—or sends his checks, notes and drafts out of town for collection. Critics of the bank say the charge for collection, ostensibly to reimburse banks for the clerical work and for interest lost while the checks are in process of collection, is really made by the managers of the clearing-house, in order to force country banks to open accounts in New York and furnish exchange to their customers, and also to induce large jobbing houses and manufacturers in non-discretionary cities to open accounts in the Manhattan banks. It is claimed that so-called country bank accounts and the accounts of large out-of-town firms will offset many times over the checks, notes and drafts which are sent out of the city to save exchange or collection charges.

Bank officials, on the other hand, say that it takes from one to two weeks to realize the cash on out-of-town checks, and that in many cases the country banks charge the one-tenth or one quarter of one per cent. which the city bank charges its customers. Furthermore, where interest is paid on daily balances, the interest on out-of-town checks more than offsets the charge, and with small accounts the out-of-town checks are often drawn against long before the cash is realized on them.

The facts are, New York financially is very much like Hicks, the famous pirate, who said his hand was against every man and every man's hand was against him. Under the present system the banks of New York are figuratively turning heaven and earth to get the reserve moneys of the country, while the country banks are equally anxious to hold up remittances to New York as long as possible and save every cent in interest from the New York banks. It is a game of chess between the city bank and its country correspondents, while the New York merchant or his out-of-town customer pays for the beer. There is money in this sort of financial dickering for the banks and possibly for the correspondents, otherwise the antiquated stage-coach system which now prevails would be abolished.

A system of direct collection or clearance such as has been in successful operation in Boston for several years could be established in New York at any time, and cash or its equivalent could be realized on all out-of-town checks drawn on banks within, say, 1,000 miles of the city, within seventy-two hours, without material expense for collection or loss of interest. Banks should notify their customers that out-of-town checks should not be treated as cash until a reasonable time for their collection has elapsed and abolish all charges for collection.

A uniform system and a uniform charge for the collection of notes and drafts should be established, and a schedule of the time which should be taken for the collection, protest or return of such notes or drafts should be prepared and lived up to.

It is ridiculous for a firm rated say AAA1, having an average balance of \$50,000 in bank, to send their out-of-town checks to some country bank, and their notes and drafts either to local banks, express companies or collection agencies for collection. The big New York banks can do this work quicker and cheaper than anyone else, and the sooner they do it the better for all concerned.

J. H. G.

NEW YORK, Sept. 22.

THE CITIZENS' BANK, OF NORFOLK, VA.

As the center of the Tidewater Region of Virginia, a territory rich in productive resources, Norfolk has become an important commercial and manufacturing city, and its banks have been quick to provide the facilities necessary to aid the development that has been steadily going forward for a long time and with an added impetus in the last few years. The commerce and industry of Norfolk have grown to their present large proportions chiefly of course because of favoring circumstances in point of location, but the energy and foresight of the managers of the city's banking and other business establishments have transformed these potential advantages into actualities.

The Citizens' Bank, of Norfolk, whose history extends over a period of thirty-six years, has borne an important part in the upbuilding of the city and the tributary country, and is to-day larger and stronger than ever before.

The Citizens' Bank was organized in May, 1867, with Richard Taylor as President

and W. W. Chamberlaine as Cashier, and the following directors, viz.: R. H. Chamberlaine, W. W. Sharp, C. W. Grandy, D. D. Simmons, Wm. H. Peters, G. W. Rowland, G. K. Goodridge, R. C. Taylor, Richard Walke, Jr., and Richard Taylor.

The bank started with a paid-up capital of \$50,000, and, having the confidence of the community, at once commanded a full share of public patronage.

In 1872 President Taylor resigned to become President of another bank, and was succeeded by Richard H. Chamberlaine, who died in office, in July, 1879. William H. Peters succeeded Mr. Chamberlaine, and continued as President until July, 1900.

In January, 1877, Walter H. Doyle was elected Assistant Cashier, and in 1879 he was made Cashier, W. W. Chamberlaine having resigned to become treasurer of the Seaboard and Roanoke Railroad. Mr. Doyle was elected to succeed Mr. Peters as President in July, 1900, and Tench F. Tilghman was elected to succeed him as Cashier.

In July, 1885, the capital was increased to \$100,000, \$40,000 of which was capitalized from the surplus fund, and the remaining \$10,000 was paid in by the stockholders.

In July, 1889, the capital was further increased to \$200,000, \$50,000 coming out of the surplus fund, and \$50,000 allotted to desirable depositors who were not stockholders.

THE CITIZENS' BANK OF NORFOLK, VA.

In October, 1891, the capital of the bank was again increased to its present amount—\$300,000. The increase was allotted to and taken by the stockholders.

The dividends declared since the organization of the bank, in May, 1867, aggregate \$489,185.50, being 467 per cent. The surplus fund and undivided profits have steadily accumulated, and aggregate to-day, \$200,000, notwithstanding the liberal dividends declared.

Those who are now, or have heretofore been, associated with the Citizens' Bank, may take pride in the position it has uniformly maintained, and can justly claim that it has, at all times, discharged its duty to the public and its stockholders.

The present officers of the Citizens' Bank are : President, Walter H. Doyle ; Vice-President, J. W. Perry ; Cashier, Tench F. Tilghman. Directors : J. W. Perry, Geo. C. Reid, G. M. Serpell, John Twohy, Robert B. Cooke, Kensey Johns, Jr., Tench F. Tilghman, McD. L. Wrenn, John N. Williams, Geo. A. Schmelz and Walter H. Doyle.

NOTICES OF NEW BOOKS.

"LE MARCHE FINANCIER, 1902-1903." By ARTHUR RAFFALOVICH. Paris : Guillaumin et Cie.

The annual volume of M. Raffalovich grows in size and interest each year. It has become an almost invaluable compendium of the financial events of the year in all the leading markets of Europe as well as the United States. The volume for 1903 fills more than a thousand pages, of which the last seventy pages are devoted to a review of the precious metals and monetary questions during the year. The record of the year in the financial world covers a period of stress and depression in Germany, England and Russia, but fortunately indicates signs of improvement in all these countries. M. Raffalovich always speaks with authority regarding Russia, because he is the financial agent of the Russian Government at Paris, and is well informed regarding the inner motives as well as the public acts of the masterly minds which have directed Russian finance during the last dozen years. Apropos of the centennial of the foundation of the Ministry of Finance and the tenth anniversary of the ministry of M. de Witte, M. Raffalovich reviews in an interesting manner the economic policy of that minister and its influence upon the political future of Russia. It will be interesting to see next year what he has to say of the change in the Ministry of Finance and the succession of M. de Pleske.

The chapter on the United States is contributed this year by Mr. Alexander D. Noyes, of whom M. Raffalovich justly says that his authority and competence are keenly appreciated.

The portion of the volume devoted to precious metals and monetary questions naturally gives much space to the movement of the past year to place the silver-using countries on the gold standard. The forms of the book were closed too early to permit a final review of the work of the American and Mexican Commissions on International Exchange, but M. Raffalovich evidently regards their work as of importance in the economic development of the Orient. Writing when the recent rise in silver had only begun, he says :

"This new fall of silver, in spite of a slight check at the beginning of 1903, has intensified the difficulties suffered by the countries which are still under the regime of the silver standard in their commercial relations with the gold standard countries. The fluctuations, persistent and irregular, in exchange, have effected all commercial operations with an element of chance which renders actually dangerous commercial relations with these countries. Moreover, the continued fall for a quarter of a century in the value of the monetary unit compared to gold and the prospect of a continuance of this fall restricts the importation of capital into these countries and thus fetters their economic development. We have seen recently a certain number of countries which, desirous of escaping these inconveniences, have resolutely abandoned the silver standard for gold, and to assure the success of this measure have established an effective domestic circulation of the yellow metal. This radical solution of the problem is not within the reach of every country. It is necessary for them to seek to content themselves with an approximate solution of the question which will promote the stability of exchange without introducing profound modifications into their monetary systems."

MODERN BANK AND OFFICE FITTINGS AND FURNITURE.

The standard of banking-room appointments has advanced until now a progressive bank manager is satisfied with nothing less than the best obtainable. Not only must the furniture and fixtures be thoroughly substantial, but they must be perfect in design and finish. Elegant furniture is recognized as being one of the profitable forms of bank advertising, for the public appreciation of a proper degree of orna-

VIEW OF GENERAL OFFICES LINCOLN TRUST CO., NEW YORK.

ment in a bank's counting-rooms is indisputable. There is, of course, no reason why the solid and serviceable should not be united with the beautiful, and a bank that does not recognize the profit to be derived from making its rooms as attractive as possible, is behind the times.

Every detail of the interior fittings must be made to harmonize in order to produce a satisfactory effect. The interior woodwork, the furniture, and even the rugs or carpets and other decorations should be installed under the direction of a skilled specialist. These specialists—who might properly be called office architects—are a development of the growing demand for fine offices and artistic furniture. The Derby Desk Company has as its New York manager Mr. Frank E. Smith, one of the best of these specialists in the planning and fitting up of bank and office interiors.

Mr. Smith was one of the first men to realize that a profitable and interesting profession could be created as an adjunct to the manufacture of fine desks and furniture. His personal hobby was the designing of furniture and fittings for offices, and he soon noticed that merchants and educated people generally appreciated rooms in which a single definite scheme of decoration for both furniture and fittings had been carried out. To be thoroughly prepared for his work, Mr. Smith made an exhaustive study of the decorative arts, as well as sanitation and ventilation, and being a skilled woodworker, he thus acquired a complete knowledge of all the details of office equipment. His skill and taste have been amply exhibited in the fitting up of many of the finest offices in New York and other cities. The Derby Desk Company has acquired the reputation for producing the best possible results in the interior fitting and decoration of offices and banks.

Desks constitute an important element in the furnishings of a bank, and by devoting proper care to their selection the attractiveness of the bank may be greatly enhanced. It is essential that the desks shall be tasteful in form and construction, and that they shall be as convenient and durable as modern skill can produce.

The desks manufactured by the Derby Desk Company, it is believed, answer the most exacting demands in all these respects. Having ample capital, long experience and a large force of skilled mechanics in its employ, the company is constantly turning out the very best desk that can be made. All materials used are carefully selected from the most desirable woods, which are thoroughly seasoned, and the methods of construction insure the highest degree of durability attainable. In making the drawers, all fronts, backs and sides are of extra thick hardwood stock, dovetailed front and back. Drawer bottoms are panelled in, giving dust-proof construction.

For a third of a century the Derby Desk Company has been manufacturing commercial furniture, and while proud of its past record and the large number of its well-pleased patrons, it is the aim of the company to make every improvement possible to keep its products up to the highest standard that human skill can reach.

In addition to the varied styles of Derby desks, which are adapted to the requirements of both large and small banks, the company also manufactures a full line of directors' tables and office chairs, and undertakes all work connected with the interior fittings of banks and offices.

We show in connection herewith a view of the general offices of the Lincoln Trust Company, of New York, which were furnished complete by the Derby Desk Company. These offices are regarded by many as one of the best examples of modern bank equipment to be found in the city.

The offices and warerooms of the company are at 91 and 93 Franklin street, Boston, Mass., and 145 Fulton street, New York.

Modern Banking Methods.

A NEW BOOK ON PRACTICAL BANKING AND BANK BOOKKEEPING.

The undersigned have just published a new work, entitled **MODERN BANKING METHODS**, by Mr. A. R. Barrett, an experienced banker and expert bank accountant and examiner.

This book describes in a plain and concise way all the various steps to be taken in organizing and operating banks, giving over 200 illustrations of books, records and forms used in conducting city and country banks in accordance with the most progressive methods. These various forms are filled up so as to represent actual transactions, thus clearly explaining their use.

MODERN BANKING METHODS will be found of great practical value to those organizing new banks and to all bankers who wish to simplify and improve their system of bank bookkeeping so as to assure the best results.

The different departments of the bank are treated of separately, and the books and forms used in each fully explained. Numerous practical suggestions are offered—the fruits of a long banking experience—for transacting the business of each department in a way to secure efficiency, speed and accuracy.

The price of **MODERN BANKING METHODS** is \$4 per copy.

THE BANKERS PUBLISHING CO., PUBLISHERS,

AMERICAN NATIONAL BANK, RICHMOND, VA.

Two recent events in the history of this bank call for special mention—the increase in the capital stock from \$300,000 to \$400,000 (the new shares being sold at \$125), and the beginning of the erection of a new building for the bank. The structure

will stand at the southeast corner of Main and Tenth streets and will have a front elevation of eight stories and nine stories in the rear. The materials used in the construction of the exterior walls will be brick and limestone, a light buff color predominating.

The interior of the bank is arranged on simple, but rather unique lines, the offices for President, Cashier, bureau of information, savings department, tellers, and lady customers' room, being grouped around a central lobby, and being the only rooms that can be approached from the public space, the working space for the clerks being placed behind the vault, and out of view of the public, communication with the working force being through the bureau of information.

To the rear of the bank, and in the mezzanine story, is the directors' room, approached from the bank by an ornamental metal staircase.

In the basement of the building is the safe-deposit department, which corresponds in position with the banking room of the floor above, and which will be conveniently arranged for the business to be carried on.

AMERICAN NATIONAL BANK BUILDING.

The seven upper floors are devoted to office purposes. On each floor there will be twelve offices, the smaller being ten by seventeen feet and the larger fifteen by eighteen feet, and so arranged that they may be used singly or in suites. Steel skeleton construction is to be employed and the building will be thoroughly fireproof. The general finish of the building is to be of a high class throughout, the entrance vestibule being lined with Italian marble with marble floors; the corridors to have mosaic floors, the staircases and elevator screen being entirely of marble and iron.

All the woodwork will be of hardwood, attractively finished. The banking room will be about twenty-three by ninety feet in size, and will be furnished and equipped in the most modern style.

In fact, the entire building has been arranged with great care, both for the use of the bank and the convenience of tenants and customers of the bank and safe-deposit department, and will be, in its design, construction and finish, a notable addition to Richmond buildings, and will give the city its first modern office building.

Although a comparatively young bank, having been organized November 1, 1899, the American National Bank, of Richmond, has already signalized its existence by a second increase in its capital (having started with \$200,000) and by beginning the erection of one of the largest and finest bank and office buildings in that city. These two occurrences show that the bank is progressively managed and indicate that this is to be one of the South's important banks. When the increase in capital was decided on the new issue of stock was immediately subscribed by present stockholders at \$125 per share, thus showing the confidence the shareholders have in the management of their institution. This confidence is fully justified by the character and ability of the men in charge of the bank. Oliver J. Sands, the President, was formerly a National bank examiner. He comes of a family of bankers whose ability and reputation are well known throughout the South and elsewhere. The other officers are: Vice-President, Chas. E. Wingo; Cashier, O. Baylor Hill; Assistant Cashier, Waller Holladay. They are all men of thorough banking experience, alive to the interests of their institution. Directors of the bank are: Wm. C. Camp, manager savings department; W. R. McComb, president Union Stock Yards; Wm. J. Payne, president Newport News and Old Point Railway and Electric Co.; Oliver J. Sands, late National bank examiner; Emmett Seaton, attorney at-law; Chas. E. Wingo, wholesale shoes; Henry W. Rountree, Rountree Trunk and Bag Co.; James R. Gordon, president Cardwell Machine Co.; Edgar G. Gunn, wholesale lumber; Philip Whitlock, American Tobacco Co.; R. H. Harwood, Harwood Bros., oils; Jackson Guy, attorney-at-law.

These gentlemen are all successful business men, and their connections assure a large share of public confidence and patronage.

As a further illustration of the growth of the bank, the following comparative statement of deposits from the time of organization will be found interesting:

December 2, 1899.....	\$124,077.09	February 25, 1902.....	\$1,254,114.27
April 26, 1900.....	576,202.09	November 25, 1902.....	1,781,802.84
February 19, 1901.....	862,419.46	June 9, 1903.....	1,986,046.41

The results which these figures indicate have been gained by diligent and persistent effort on the part of the officers and employees of the American National Bank to render courteous and efficient service to all patrons of the bank, and by the thorough provision made by the management to meet all the requirements of a completely-equipped modern bank.

CALIFORNIA BANKS FLOURISHING.—The reports received by the Bank Commission, showing the financial condition of all the county commercial banks, numbering 185, at the close of business on September 8, give a total of resources amounting to \$95,929,920. A tabulated statement of the financial condition of all the banks in California, exclusive of National banks, shows resources totaling \$446,918,863. The board, in its report, says that every bank in the State is enjoying unprecedented prosperity. The aggregate gains in deposits and resources during the last four months amount to nearly \$4,000,000. The amount due depositors is \$345,592,302.—*San Francisco News Letter.*

KNICKERBOCKER TRUST COMPANY, NEW YORK CITY.

We present herewith an illustration of the beautiful new building recently erected by the Knickerbocker Trust Company, of this city. The building stands on the site of the old Stewart Mansion, at the northwest corner of Fifth avenue

and Thirty-fourth street. The new structure, which was designed by Messrs. McKim, Mead & White, is an example of Grecian architecture, with Corinthian columns, Vermont marble body and bronze finishings. There are four Cippolino marble columns, monoliths weighing seventeen tons each.

The safety deposit vault contains 2,000 boxes. The outer vault door weighs nine tons, and the hinges alone 3,700 pounds. There is a dining-hall, 40 feet by 20, for the exclusive use of the employees of the Knickerbocker Trust Company. Attached is a kitchen, wherein are cooked all the lunches served in the dining-room.

The floor space of the trust company offices will cover 5,000 square feet. The woodwork finishings and desks are the work of Davenport, of Boston, the well-known designer of bank interiors. The white marble of the interior was brought from Norway and from selected quarries. Eight rooms are devoted to the coupon department, and the other departments are equally favored as to space.

An entrance to the building on Thirty-fourth street leads to the second, third and fourth floors, on each of which are four offices, with a total of 5,000 square feet of space on each floor.

The company moved into its new building November 2.

The Knickerbocker Trust Company was established in 1884, and has made very gratifying progress, its deposits on June 30 last amounting to \$39,680,608. Its capital is \$1,000,000 and the undivided profits \$2,389,021.

In addition to allowing interest on time deposits, the company receives deposits subject to demand checks, which pass through the clearing-house, as do checks on city banks. The company also transacts the business usually done by trust companies, acting as executor, administrator, guardian, receiver, registrar, transfer and financial agent for States, cities, towns, railroads and other corporations, and accepts other trusts in conformity with law.

City branches of the company are in operation at 66 Broadway, 125th street and Lenox avenue, and 148th street and Third avenue.

The officers are : President, Charles T. Barney ; First Vice-President, Fred'k L. Eldridge ; Second Vice-President, Joseph T. Brown ; Third Vice-President, Julian M. Gerard ; Fourth Vice-President, Benj. L. Allen ; Secretary and Treasurer, Fred'k Gore King ; Assistant Secretary, J. McLean Walton ; Assistant Treasurer, Harris A. Dunn.

NOTE ISSUES OF THE BANK OF ENGLAND.—Discussing "The Bank Reserve and the Rate of Discount" in its October issue, the London "Bankers' Magazine" points out that there is a tendency on the part of the note issues of the Bank of England to rest more largely on securities than on coin and bullion. Comparing the statements of the issue department of the bank on July 2, 1879, and August 26, 1903, the following facts are shown :

	July 2, 1879.	Aug. 26, 1903.
Notes issued.....	£49,022,675	£52,406,120
Securities:		
Government debt.....	11,015,100	11,015,100
Other securities.....	8,964,900	7,434,900
Gold coin and bullion.....	34,022,675	33,956,120

It will be seen that the notes issued on August 26, 1903, were £3,388,445 in excess of the amount reported on July 2, 1879, while the securities were £3,450,000 more in 1903 ; but the gold held was actually £66,555 less than in 1879. Bringing the comparison down to September 2, 1903, it is shown that the gold held in the issue department was \$640,840 less than in 1879.

As will be seen by the table above the total note issues of the Bank of England on August 26 last were £52,406,120, of which £18,450,000 was based on the Government debt and "other securities," while the remainder, £33,956,120, was based on gold coin and bullion.

It will be seen that the notion that Bank of England notes are practically gold certificates is not quite correct.

AMERICAN BANKERS' ASSOCIATION.

*TWENTY-NINTH ANNUAL CONVENTION, HELD AT THE CALIFORNIA
THEATRE, SAN FRANCISCO, CAL., OCTOBER 21, 22, 23, 1903.*

The convention met at ten o'clock A. M., Wednesday, October 21, being called to order by the president, Caldwell Harly, President of the Norfolk National Bank, Norfolk, Virginia.

Prayer was offered by the Right Rev. William Ford Nichols, Bishop of the Episcopal Diocese of California.

THE PRESIDENT: We will now listen to an address of welcome to the city of San Francisco by Hon. E. E. Schmitz, mayor of the city.

ADDRESS OF WELCOME BY MAYOR SCHMITZ.

As the chief executive officer of this city, and on behalf of all her people, I extend you a hearty welcome.

You who have come from the distant centers of our national life have done us signal honor by selecting this far western outpost of our American development as the meeting place of your important convention, and it is the desire of our citizens that your welcome shall be not only to our city, but also to the hearts and homes of our people. For whatever be the fact in other lands, we recognize that in the life of the American banker there is always room for the play of the impulses of the heart and of the influences of the home.

We welcome you, not alone for the advantages which may in the future accrue through your visit to the city of which we are so proud, but also for the achievements which have already been made possible for San Francisco, and indeed for all California, through the conservative yet abundant confidence of the men who control the financial arteries of the nation—the bankers of the United States.

Our State and our city have great natural advantages; we glory in our sunshine, our fruit and our flowers; we exult in our great mineral and other material resources, but we know that without the aid of capital, co-operating amicably with the hands of labor, all this natural wealth, unproductive, would be dead and would contribute nothing to the prosperity or advancement of our people. Inert wealth is barren of advantage.

The future holds for San Francisco great possibilities from the internal resources of our State, from the establishment of local industries and enterprises, as well as from the commercial development which will arise from our new policy of national expansion, from the annexation of the Hawaiian Islands, from the acquisition of the Philippines, from the opening doors of Oriental empires, from the Isthmian canal—yet we all know that without the generous, yet conservative, regulating hand of capital at the throttle, the engine of commercial prosperity may explode its boilers, or run off its track, leaving ruin instead of advancement, wreck or stagnation instead of affluence and progress. You have great power. We realize that in your commanding hands, through which daily ebbs and flows the tide of the nation's wealth, you hold in a large measure the commercial and industrial destiny, not only of the city of San Francisco, not alone of the State of California, but, indeed, of our entire country, and of all your fellow citizens.

The people look upon you largely as the middlemen of commerce and industry, the balance-wheel between those who pay and those who receive. They know that through your advice and judgment the scales may hang even or uneven between capital and capital, as well as between capital and labor, and they live in the confident hope that your judgment and your advice will always be such that conditions of peace may ever prevail, both in those commercial competitions in which capital vies with capital, and in the industrial competitions in which capital meets

F. G. BIGELOW

The convention met at ten o'clock A. M., Wednesday, October 21, being called to order by the president, Caldwell Hardy, President of the Norfolk National Bank, Norfolk, Virginia.

Prayer was offered by the Right Rev. William Ford Nichols, Bishop of the Episcopal Diocese of California.

THE PRESIDENT: We will now listen to an address of welcome to the city of San Francisco by Hon. E. E. Schmitz, mayor of the city.

ADDRESS OF WELCOME BY MAYOR SCHMITZ.

As the chief executive officer of this city, and on behalf of all her people, I extend you a hearty welcome.

You who have come from the distant centers of our national life have done us signal honor by selecting this far western outpost of our American development as the meeting place of your important convention, and it is the desire of our citizens that your welcome shall be not only to our city, but also to the hearts and homes of our people. For whatever be the fact in other lands, we recognize that in the life of the American banker there is always room for the play of the impulses of the heart and of the influences of the home.

We welcome you, not alone for the advantages which may in the future accrue through your visit to the city of which we are so proud, but also for the achievements which have already been made possible for San Francisco, and indeed for all California, through the conservative yet abundant confidence of the men who control the financial arteries of the nation—the bankers of the United States.

Our State and our city have great natural advantages; we glory in our sunshine, our fruit and our flowers; we exult in our great mineral and other material resources, but we know that without the aid of capital, co-operating amicably with the hands of labor, all this natural wealth, unproductive, would be dead and would contribute nothing to the prosperity or advancement of our people. Inert wealth is barren of advantage.

The future holds for San Francisco great possibilities from the internal resources of our State, from the establishment of local industries and enterprises, as well as from the commercial development which will arise from our new policy of national expansion, from the annexation of the Hawaiian Islands, from the acquisition of the Philippines, from the opening doors of Oriental empires, from the Isthmian canal—yet we all know that without the generous, yet conservative, regulating hand of capital at the throttle, the engine of commercial prosperity may explode its boilers, or run off its track, leaving ruin instead of advancement, wreck or stagnation instead of affluence and progress. You have great power. We realize that in your commanding hands, through which daily ebbs and flows the tide of the nation's wealth, you hold in a large measure the commercial and industrial destiny, not only of the city of San Francisco, not alone of the State of California, but, indeed, of our entire country, and of all your fellow citizens.

The people look upon you largely as the middlemen of commerce and industry, the balance-wheel between those who pay and those who receive. They know that through your advice and judgment the scales may hang even or uneven between capital and capital, as well as between capital and labor, and they live in the confident hope that your judgment and your advice will always be such that conditions of peace may ever prevail, both in those commercial competitions in which capital vies with capital, and in the industrial competitions in which capital meets

F. G. BIGELOW
President American Bankers' Association.

with labor, ever bearing in mind that these factors of our national progress are and ever should be co-ordinately and reciprocally interested for their own benefit and protection in creating and maintaining such conditions that capital may always have safe and constant investment in order that labor may have steady and remunerative employment.

These problems and many others being largely in your hands, our community recognizes the importance of your gathering and the seriousness of your deliberations and is greatly interested in them.

You are the financial engineers of our country, you determine the lines of our commercial and industrial action.

It is for you to solve the great problems arising from the demand and supply of our medium of exchange in the various sections of our country. It is for you, like financial physicians, to hold your hands on the nation's financial pulse and to determine the ailments, if any, which exist, and the remedies to apply.

You all realize and know that the prosperity and well-being of the nation are not measured merely by the amount of money stored in the banks and safe-deposit vaults, but largely also by the advancement and progress of the masses of the people, and by the peace and contentment which may prevail among her citizens.

In the consideration of the questions which may come before you, this element will, I am sure, be accorded such attention as will assist in the development of our national prosperity and pride and will redound to the benefit and advantage of every element of our population, irrespective of class, condition, financial or social station.

To the great credit of you who control the finances of our country, let it be said that in almost every emergency you have been ready and prompt to act for the community's common good.

It may be especially appropriate in this presence also to say that the banking element of San Francisco has ever been especially ready to co-operate with the rest of our citizenship in everything which tended to the upbuilding and uplifting of our city, its business and its enterprises, or which conduced to its material advancement and progress, and that our bankers have for that reason always enjoyed the good-will of the great majority of our people.

Gentlemen of the convention, once again I welcome you.

ADDRESS OF WELCOME TO THE STATE OF CALIFORNIA BY HON. GEORGE C. PARDEE, GOVERNOR.

Gentlemen of the Bankers' Convention—It is not often that the Governor of California has such an opportunity as this. Whenever the Governor has faced even a single banker the latter has listened only as long as he pleased. To-day, however, the tables are turned. The Governor must, out of sheer politeness, if for no other reason, be listened to as long as he wants to talk. And to think that he has, not one, but such a multitude of bankers, even the assembled representatives of the whole American banking world, completely at his mercy, fills the Governor's soul with a great and consuming joy.

My "paper" to-day, for once, must be "accepted" without "protest"; the "drawer" has the "drawee" at a great disadvantage; no "discount" will be allowed; it is a "sight draft" without "grace," "second and third" not only "unpaid," but even unissued. Gentlemen, there is but one thing for you to do, and that is to shelter yourselves behind the customary "no recourse," for you had but one, and that I have removed by seeing to it that yonder doors are locked and carefully guarded.

I suppose I ought to have begun this address of welcome by asking you the question with which, it is said, every Californian greets those whom he meets for the first time, viz.: "How do you like California?" What we really mean by that question is, not "How do you like California," but "How much do you, like California?" For we know that everybody likes the Golden State, and we always judge of the intelligence and intellectuality of the stranger within our gates by the degree of love he expresses for California. So, as I look out over your faces to-day I am sure that you like California better, almost, than any other place on earth.

But you are not strangers within our gates. You are our welcome guests. Welcome to the land where there are no lightning rods nor cyclone cellars; where no one dies from heat, or perishes with cold; where roses bloom the year around, and Nature always turns her smiling face toward him who trusts her for his sustenance. Welcome to the western boundary of the United States, where the great Pacific

sends his surges thundering to our very doors—the great Pacific that soon will bear upon his calm, untroubled bosom such argosies as trade and commerce have not seen before.

Welcome to the Golden State, which opens on to far Cathay, and through which, ere long, will flow the "wealth of Ormus and of Ind." Welcome to our mines, our forests, our mountains, our valleys, soon to teem with millions, where but scattering tens of thousands now reside. Welcome to the dizzy depths and towering heights of the Yosemite. Welcome to the green and gold of our orange and lemon groves. Welcome, in a word, to California. For you there is no latch-string and no key—our doors are all ajar.

THE PRESIDENT: We will now listen to an address by the Hon. James D. Phelan, representing the bankers of San Francisco.

ADDRESS OF WELCOME BY HON. JAMES D. PHELAN.

In providing three welcoming speeches, the committee, no doubt, desired to express, as by an object-lesson, that you are thrice welcome; and in welcoming the bankers' association to San Francisco we are not unmindful of the compliment of your coming. We thank you for having come.

In one sense our city is remote from the money centers of the country, and in another sense the money centers are remote from us. San Francisco is nearer the geographical center of the United States than the cities of the East. At one time we were the outpost, but now we have Alaska and our island possessions far to the westward, and we feel less the sense of isolation. We are on the road, instead of being at the end of the road. The convenience of travel and the rapidity of communication, and, more than all, your actual presence has convinced us, however, that you come not as strangers, but as neighbors, fellow citizens of our great Republic, bound together by hooks of steel, as Shakespeare has defined the ties of friendship; that our interests are one and that better acquaintance will result in common advantage.

You, gentlemen of the bankers' association, represent the great eastern money centers; we represent the financial center of an important subdivision of the country—as you have been told. But some one has said that you can't tell the truth about California without lying. Unparalleled natural resources, found in our mountains and valleys, lie behind us and a great waterway stretches before us.

San Francisco is the chief port of the United States on the greatest of the world's oceans—an ocean which in turn washes the shores of the most populous of the world's countries. So we have the prestige of position in the commerce of the Pacific.

The early history of our city, however, has been associated more intimately with the discovery of gold. The reason for our city existed before the discovery of gold, and it will stand until man's thirst for gold is satisfied. Ours, therefore, is an eternal city, sitting, like Rome, upon its seven hills.

Our claims as a financial center are undisputed. We speak in the capitals of the world for the wealth of California, and we have here the facilities for doing the necessary work. The precious metals are coined in the mint located in this city, and the sub-Treasury holds the large collection of customs and internal revenues made in this port, although the National banks do their best to keep it in circulation. We have seven National banks, twenty-five commercial bank and trust companies, organized under the laws of the State, and nine savings banks. In the State there are sixty-one National banks, 210 State commercial banks, sixty-eight Savings banks and nineteen private banks, with a total of \$570,000,000 of assets.

In the past sixteen years there has been a net increase of twenty-two National banks, 122 Commercial banks and thirty-four Savings banks, which shows the rapidity of the growth of banking institutions. The total clearings of the San Francisco Clearing House for the year 1902 were \$1,373,360,000, and "Bradstreet's" report of the clearings for the last week shows San Francisco seventh on the list of American cities, with \$32,826,000, ranking every city west of Pittsburg, excepting Chicago and St. Louis. Los Angeles is twenty-second, with \$6,500,000, and Seattle twenty-seventh, with \$4,800,000.

San Francisco is the New York of the Pacific slope, and the capital of what President Roosevelt called during his recent visit "the West of the West." Its financial stability seems to be insured by the diversity of its resources. In California a total failure of crops is unknown. Not only like the Middle West have we cereals and cattle, but all kinds of minerals, including mineral oil and all kinds of agricultural and horticultural products; and so the gold fields, golden grain and

golden fruits are all tributary to the city by the Golden Gate, where mechanical skill also makes its home; where the Oregon, the pride of the Navy, and the Olympia, the flagship of Dewey, were built, and where the municipal arms bear the appropriate motto, worthily won, "Gold in peace and iron in war."

It is true that we have labored under the disadvantage in the past of having high-priced fuel, but now oil and the power generated in our mountain streams and transmitted to the cities make us independent of the world. Obliterate the Middle West, submerge the populous East and bury the country's metropolis deep in one of its yawning subways, California could still stand alone, a self-sufficient commonwealth.

But what has developed our State? The eastern immigration. And where do we market our products? In the Eastern States. Without you we would be a province; with you we are an empire. Our interests are interdependent. If any calamity befell you, to whose sympathetic ears would we recount our glories? Your tourists and your home-seekers freely come without the compulsion of calamity.

We have read of the great floods in Wall Street, which remind us of the freshets in western streams after a thaw, and, using a western term, they call the streets of Gotham canyons formed by the granite walls rising on either side. You have also your scenic wonders, and in the neighborhood of the Stock Exchange is what they call the "pit," which now seems bottomless—caused either by glacial action, or the erosion of water. Like the sunken road at Waterloo—suggestive description of the battle of giants now being waged—the Napoleons of finance will soon fill it up.

We have had our speculative experience, but not since the '70's, in the manipulating of Nevada mining shares, which demoralized business and impoverished the people. The pit was the threshold of the pitfall. Mining in California had no such effect, for it was conducted legitimately by the pioneer, and the mines to-day are nearly all privately owned, and you will find none of the stock in the market. They are too good even to give away to your friends. My friend, the statistician of the mint, gave me this figure yesterday, telling me: "There is something that will startle your bankers"—\$1,380,000,000! And I reminded him that the clearings of San Francisco did not amount to that in a whole year, and that the capital of the Steel Trust exceeded it, and that it was much harder to dig money than to print it, and I thought that the figures, therefore, would not make much impression upon the bankers' convention. They are accustomed to such figures. But, large as they are, or, as you will, small as they are, they had a very important influence at the time, and have had since. They gave character to the State for all time and at a critical period strengthened the Union cause. Historians tell us that the yield of California gold was no insignificant element in the success of Union arms. California was a loyal State, and its gold production gave credit to the Federal Government at a time when it was most needed and which enabled it to carry on the war. We are told by a distinguished authority that to wage a successful war three things are necessary: "First, money; second, money; third, money;" and here is where the pen is mightier than the sword, and the banker more potent than the battery.

The men who are the custodians of the people's money should never be estranged from the people's cause, but should aid every legitimate enterprise, and, if needs be, finance every necessary war. The banker is an important integral part of any community, and must cast his fortunes with it. If San Francisco suffers, its bankers are the first to feel the pain, and that is true of all other bankers in every other land.

The banker is not a mere money-lender. He controls the motive power as well as the brake of industrial undertakings. His judgment, if wisely exercised, either prevents failure or speeds success. There are illustrious examples. After Isabella had pawned her jewels, Columbus was not ill equipped for the voyage, but he was finally outfitted by his bankers, the Pinzons, who made possible the discovery of America, and if they did not receive their contingent 33 1-3 per cent., at any rate, like their client, they did not go to jail, which was something. I think they also got their boat back.

Robert Morris was the banker of the Revolution, and when he with others pledged to the cause "his fortune and his sacred honor," he banked on the success of Washington, just as Washington banked on the financial skill and patriotism of Morris.

Conservative and enlightened banking is a high and worthy pursuit—to keep

safe the money of the people and advance the interests of city, State and nation. So, we welcome you for the power of your position and the worthiness of your work.

EFFECTS OF THE GOLD DISCOVERIES IN CALIFORNIA.

But to return. How did the discovery of gold give character to financial California? It logically put us on a sound money basis. During the period of rag money we adhered to our own monetary system. Any merchant who paid his debts in depreciated currency was discredited. The Legislature gave us a specific contract law, which stands to-day, and which has been upheld by the courts, enabling any citizen to contract for the payment of his bills in gold.

To meet these conditions, Congress, after it had created National banks, authorized National gold banks, and I believe the First National Bank of San Francisco was the first gold bank established under that act. After the resumption of specie payments the reason ceased and the law was repealed.

Unlike the usage elsewhere, however, you will still find gold in common use among our people, and you will confess that there is some satisfaction in handling the basic metal itself in our daily exchanges. It is akin to dealing with the principal instead of with his representative. The five, the ten and the twenty-dollar piece circulate freely, and in this wide world there is no coin more beautiful than the double eagle of Uncle Sam. Stamped in the precious metal itself, whose weight, fineness, color and form evidence its intrinsic virtues, solid yet brilliant, are imaged the lineaments of the bird of freedom and the goddess of liberty—the one to soar abroad, respected everywhere; the other to symbolize at home domestic industry. And if the coin is inscribed with the message "In God we trust," it asks nothing impossible of God.

Our people do not like paper money, nor paper capitalization. In common with your own purposes they look for security in real values. And so California is a safe field for banking as well as for bankers, and that is one of the reasons why you were bidden hither, and you, although not unaccustomed to saying "no," and to say it graciously, accepted our invitation. We thank you for it. We invite you now to share the love we bear our State, to which you have been introduced perhaps in extravagant phrase; but it can best and most truly speak for itself.

And now, on behalf of our bankers, I extend to you again a most hearty welcome.

REPLY OF PRESIDENT HARDY TO THE ADDRESSES OF WELCOME.

To you, gentlemen, who have so warmly and eloquently welcomed us, let me express the hearty appreciation of the members of the American Bankers' Association.

The fame of your beautiful city and of the great Pacific Coast, with its glorious climate, its wealth of fruits and flowers, not forgetting your more material wealth, has become as world-wide as the great ocean, upon which many of us look out for the first time. The cordiality with which your hospitality is tendered us leaves the impress of its sincerity, and we come prepared to enjoy it to the full and take home with us any that may be left over.

One of my early recollections is of sitting in open-eyed wonder, listening to the marvelous tales of one of the old "forty-niners," an old friend of my childhood days. His tales of trial, privation and adventure, among those rugged pioneers who first wrested from mother earth her hidden treasures of yellow metal, have now grown familiar to all; but how little did even those brave spirits dream of the glorious civilization, wealth and culture whose foundation they were laying.

The wonderful creation of your energy and toll which you set before us marks an advancement which speaks more eloquently than words of your courage, wisdom and enterprise. Your achievements reflect a noble ambition. We rejoice with you in this opportunity of sharing their enjoyment and wish you Godspeed in the further development of the bright future before you. Your Golden State, through its Golden Gate, is "casting its bread upon the waters" of the great Pacific and from the Orient will, in time, receive a return equalled only by the great wealth developed within its own borders. It will take but a few years of this twentieth century for your commerce to show more development than has taken place in the 400 years since Balboa first gazed upon the great waters of the Pacific. When we separate to return to our homes we shall carry with us an example which we may all strive to emulate.

Once more, in behalf of the members of the association, I thank you for your hearty welcome; it is worth coming 3,000 miles for.

ANNUAL ADDRESS OF CALDWELL HARDY, PRESIDENT AMERICAN BANKERS' ASSOCIATION.

Another year has passed since our last convention, and we come together impressed, as we are at each of our annual gatherings, with the momentous tide which has swept us along into history, the history of a commercial and financial epoch, such as has never been witnessed before, the future of which holds an interest for all of us, and is equalled only by the giant forces which have been instrumental in our progress. To attempt to review in detail these events would be impossible, but I shall aim to touch, briefly, on some salient points bearing on our finances and commerce.

OUR DEVELOPMENT.

A few years ago we were engaged in a battle of the standards, an unpromising and decisive struggle between a debased standard and the gold standard, recognized by the enlightened world; but, fierce as was the contest, the intelligence of our people arrived at the sound conclusion, as it always does, and in the final adherence to the gold standard laid a new corner-stone of prosperity. And what has enabled us to build on this foundation the widespread edifices of our national growth? Good crops, as the fountain source, lending a new impetus to the wheels of industry, insuring abundant employment for labor in our fields, our mines, our factories and our railroads. A conjunction of these re-awakened energies sent pulsating through our arteries of commerce an increased demand and production, responsive to each other. Good times have come again to our farmers and our manufacturers, and our railroads have been burdened with our crops and products and the return merchandise purchased with their proceeds.

The unprecedented prosperity of the past few years, growing out of these conditions, brought us last fall to a climax of high prices for commodities and securities of all kinds. The same sunshine which brings to its full fruition our rich harvests, also fosters the tares, unless they be plucked up. So among the substantial edifices of our prosperity, have sprung up artificial commercial structures, which have failed signally to stand the test of time. Over-sanguine people, some probably not over-scrupulous (but there are few people more capable of making trouble than your full-fledged, unadulterated optimist), swept away with the craze for making money or anxious to profit by this craze in others, had been capitalizing and recapitalizing schemes of all kinds and inducing people, with paper profits, to underwrite flotations which they were as unable to carry as Gulliver was to lift himself by his boot-straps. The boom had gone too far and the pessimists predicted open disaster, the natural reaction set in, money was in demand at increasing rates, extended credits were being withdrawn, collaterals and securities were closely scrutinized and a general house-cleaning begun where it was most needed, in the weeding out of over-capitalization and inflated securities.

We had gone through a period of liquidation in speculative circles of the most drastic character, without serious results except to the few who have gotten too far beyond their depth. The process is not yet complete and the way is still strewn with cripples and "indigestible" securities, but that general business conditions are sound no one can doubt. That we shall have an ebb and flow in the tides of industry is as certain as the cycle of the seasons, and the source of these tides comes from our mother earth to the tillers of our soil and, as seedtime and harvest yield returns, so shall our prosperity be.

A WORD OF CAUTION.

Let us review, briefly, the attitude and relation of some of our banking institutions to the conditions and incidents referred to, and the methods pursued by them in the prosecution of their business. I refer especially to the vicious policy of paying high rates for deposits, particularly savings and time deposits. The incidents of 1893 and the next few subsequent years left their indelible impress upon the minds of most of our older bankers, but there are not wanting signs that these lessons have been forgotten. If there is any class of men more than others who should never take speculative risks it is those who are handling the earnings and savings of others, and the seeking of deposits at high rates of interest, which can only be earned by speculative investments, is a menace to sound banking. Savings depositors for safety of principal rather than alluring interest rates, which are necessarily coupled with greater hazards, should carefully shun such institutions, of which there are, however, happily but few.

Our banks, indissolubly linked with the commercial interests of our country, have been as a whole eminently conservative, and the present confidence in their stability and soundness attests the ability and fidelity with which you, their representatives, have discharged your great responsibilities.

HAVE WE OVERTAXED OUR WEALTH?

The vast increase in our national wealth is unmistakably attested by the enormous increase in bank deposits, in the aggregate value of our marketable securities, of manufactured products and our industrial plants. That we have successfully stood the liquidation through which we have passed is another unmistakable evidence of our wealth; but, after all, have we not been attempting to develop our resources, even in a legitimate way, more rapidly than our capital would conservatively permit of? Our steady increase of population, healthy as it is, is almost infinitesimal compared with the field before us in undeveloped resources of our country. The population which our country could successfully maintain is so far beyond the ken of human knowledge, that it remains for generations yet unborn to solve the question. If this be so, has not our development outstripped our wealth; and, if so, what is the remedy? Certainly not by seeking to push the development on borrowed capital or inflated credit, but by contenting ourselves with cutting our garment according to our cloth, building steadily, only as our resources enable us, paying as we go, owning what we buy.

THE CURRENCY.

The changes have been rung on it and rightly. I fear you would be reluctant to admit you know more about it than your Bible, but I suspect you think you do all the same, and if there is anything about which a banker thinks he knows more, and probably knows less, it is the currency. The conditions existing in this country differentiate the currency problem for us from that of any other country that has ever had a paper currency, and every man's views are more or less theory when he has had no opportunity of demonstrating them practically. What part has the currency problem played in the stirring commercial events to which I have alluded? The vast majority of us feel assured we have had, so far, all the currency we have needed and that an increase of it, just at this time, would lend a further undesirable stimulus to speculation. The enormous production of gold in the last few years (about which we are to have some very interesting figures from one of our distinguished guests) has been either lost sight of, or, if studied, will furnish food for thought. The advantages claimed for the bank circulation of other countries, over our bond-secured notes, have much merit from a scientific standpoint, if the element of risk could be eliminated which has brought disaster in some instances—notably, in that of the Australian banks some years ago. The practical question is, could it be satisfactorily grafted on to our banking system and, if so, how? The idea of a "central bank" or a "branch banking system" is repugnant to our conception of free government and institutions, and, unless I mistake the temper of our people, will never be accepted. Neither will any form of currency be accepted which does not carry with it the same confidence of security which our bank notes now enjoy.

The discussion of the matter from an academic standpoint can be prolonged indefinitely, but what the practical banker wants is details which will carry conviction to his mind, as to how such a currency can be so guarded as to fulfill the conditions outlined. What we need is a currency to be used, not for the purpose of creating new liabilities, but to enable us to move our crops without distress and to liquidate comfortably liabilities already created. We shall, probably, arrive at some solution of this question, first, in the shape of a limited circulation, so highly taxed as to permit only of its temporary use from time to time, and be governed further by the results of this experiment. I should use here the popular term of "emergency circulation," but for a recent protest from a friend in discussing this subject, which suggests the paraphrase that "a rose by some other name would smell sweeter." He says:

"Why will people continue to refer to this needed adjunct to our currency, by a title (emergency) that would preclude any sound banker from using it, when he would thereby confess that he had reached a point where air was not sufficient for his lungs, and he was using oxygen, equivalent to the doctor's saying he was on his last legs and that there was only one hope of saving him, and that was extreme measures? We don't want an extreme-unction currency."

E. F. SWINNEY

First Vice-President American Bankers' Association.

At your last convention resolutions were adopted authorizing the appointment by your president of a committee of seven citizens of the United States to consider and report to your next convention on the "Currency Question," and, in pursuance of these resolutions, the following gentlemen were appointed on the committee provided for:

C. S. Fairchild, New York Security and Trust Company, New York; H. C. Fahnestock, First National Bank, New York; Myron T. Herrick, Society for Savings, Cleveland; J. J. Mitchell, Illinois Trust and Savings Bank, Chicago; J. C. Van Blarcom, National Bank of Commerce, St. Louis; Homer S. King, Wells, Fargo & Co. Bank, San Francisco; George Q. Whitney, Whitney National Bank, New Orleans.

They have given the matter serious and earnest consideration and their report, which will be presented to you to-day, reflects the care and conservatism with which they have discharged the duty imposed upon them.

THE SUB-TREASURY SYSTEM.

The natural function of a bank is to gather the money of the community that it serves and distribute it in loans on good security among those who need it, and the bank that performs this function with the greatest care and success best serves the interest of its people. The money of the country should stay in the channels of trade, and the miser who gathers his gold and hoards it is a parasite on the body politic; but when the Government by taxation gathers money in advance and in excess of its needs, and withdraws the same from the channels of trade, it is doing exactly what the miser does. No other intelligent people would have so long rested passively under such a system, and we should voice our demands for a reformation of this pernicious practice in no uncertain tones.

The disposition of a Secretary to minimize this difficulty should not depend upon an individual construction of the law, but the statutes on the subject should be made so plain as to make the duties of the Secretary ministerial only, and so regulate the operations of the Government as to meet its requirements without friction with the general finances of commerce.

A discussion of the currency brings us irresistibly to the consideration of this antiquated method of handling Government funds, and the report of our currency committee, heretofore referred to, accentuates the necessity for dealing with this subject as a question to be first disposed of, precedent to the undertaking of any currency reform. The demoralizing effect of the annual talk regarding the locking up of money in the Treasury is almost worse than the actual withdrawal of the funds. Remove the cause of the discussion, and the ending of it will be quite as beneficial as the actual freeing of the money. I hope it may be your pleasure to push vigorously the reform recommended by the committee in this respect.

FORMATION OF GREAT INDUSTRIAL CORPORATIONS.

A consideration of our present development and conditions would not be complete without reference to our corporations of the present day, standing as they necessarily do in such intimate relationship to banking.

In the formation of our great industrial corporations we have been confronted with new and strange conditions so experimental in character that we can as yet reach no conclusion as to what will be their destiny. Eliminating those of a fraudulent or fictitious character, nearly all of them have been subject to criticism in the matter of capitalization, and the weak point, I might say, with all of them has been the failure to provide a reasonable working capital. A considerable number of minor corporations with local credit were able to secure on a legitimate basis an aggregate of bank accommodation, largely in excess of that which could be secured by many of the consolidated corporations into which these minor concerns have been merged. The necessities for enlargements and improvements have not been adequately provided for, and the working capital has often been further impaired by the illegitimate declaration of dividends. That the follies and peccadilloes of these enterprises have not brought more serious consequences to the whole body politic is a cause for congratulation, but it is a subject for regret that there have been so many innocent sufferers from their operations.

FINANCIAL AFFAIRS OF THE RAILROADS.

There has been a greater creation of securities in the consolidation of many of our railroads than actual values, apparently, justify, and where this has been

the case we naturally cannot lend our approval; but the concentration of management and control has brought about a stability of rates, which has created an established value for their legitimate securities, without hardship to the patrons of the roads. It is a serious question whether the aggregate market value of all of our railroad securities equals the amounts originally expended in the construction of them with even a moderate return upon the investments. The reduction in the cost of transportation, by reason of the great improvement in the physical conditions of the roads, has made it possible to move freight profitably at rates which would have formerly been considered impossible. I do not mean to suggest that the roads should be left entirely free in the matter of fixing rates, but the reasonable concentration of their management should rather facilitate their control in this respect by conservative legislative enactment. The enormous increase of business developed by our prosperous condition has so overtaxed existing facilities as to necessitate extensive improvements, which have brought the roads into the market with borrowings which have seriously taxed our resources; but where these improvements have been undertaken on a legitimate basis there is, apparently, little reason to apprehend any difficulty in carrying them to a successful completion and utilization.

PUBLICITY OF THE OPERATIONS OF CORPORATIONS.

A word on this subject, as it relates to all public corporations. Some criticism has recently been made of the publication of the weekly New York bank statement. I use the incident merely to point a moral. The form and method of making this statement has been, more or less, a subject of discussion for some time past. If the form and method of publication is not as accurate as it should be, make it what it should be, but do not suppress it. The publication, occasionally, of an individual bank statement, which it subsequently develops is not legitimate, would be a poor excuse for the suppression of bank statements in general, and I think a suggestion that we do away with bank statements would be unanimously vetoed. Bank statements, in general, convey fair and intelligent information as to the status of the banks, and if the same publicity from other public corporations could be required, a most important service would be rendered the public. The great insurance companies, which look to the public for support, recognize the wisdom of publicity by publishing full detailed reports. And where this principle is not voluntarily recognized the States by wise legislation have protected the public by the establishment of departments for the supervision of the companies. The Government has now taken up the work along more general lines through its new Department of Commerce, and I can but think that the movement will meet the approval of the best banking thought of the country.

PROGRESS OF THE ASSOCIATION.

For details of what has been accomplished during the past year. I shall refer you to the report of the chairman of the executive council, within whose province the active work of the association lies, more particularly, and the reports of the various committees.

Our membership continues to show a healthy and gratifying increase, and has now risen beyond seven thousand. The work of our protective committee has been pushed with the vigor and intelligence which have characterized it for years past. Your committee on uniform laws has continued its valuable work, and we look forward to the time when the law of negotiable instruments shall be the same in all of our States. The work being done by our committee on education is only equalled by the undeveloped field before it. There may have been doubts, at times, in the minds of some of our members as to the value of this work, but the results achieved, as set forth in the committee's report, leave no further room for question. What more eloquent tribute to this work could be paid than that which I received in a recent letter from one of our prominent members, reading: "Already four of the most prominent men in instituting our chapter have been raised from 'the ranks' to officials in the banks with which they are connected." Your fidelity committee has devoted itself with painstaking care and assiduity for several years to the protection of your members against the unfaithfulness of employees and establishing of a uniform and fair form of bond, at reduced rates, which has resulted in the saving of many thousands of dollars to our members. The work of the committee has brought it to the point of outlining the future possibilities in the establishment of a "bankers' guaranty fund." This would seem to be the logical conclusion of this work, and unless such a plan be adopted

the committee has, probably, accomplished all it can do. The success which similar funds have met with in England and the establishment of them by large banks and other corporations attests their practicality. I cannot too strongly urge upon you the careful consideration of the report of the committee on this most important matter.

In reviewing the various subjects touched upon, I have not hesitated to criticize, where I have felt it necessary, and to display a danger-signal where it seemed to be required, but while counseling conservatism, I would not have you count me a pessimist. Banking has developed into a profession, and not a mere trade. We are insisting upon a more adequate preparation for business, for a larger education, a deeper knowledge of principles and economics and a fuller appreciation of the principles which should govern the relations of men in banking and commercial life. The achievements of our association in protective, educational and legislative work accentuate the possibilities of organized effort and our growth in membership and influence is the tangible returns of the seeds which we have sown. May our future years continue to be filled with the further fruition of our efforts. Who can recount the friendship formed and tell of the memories of pleasant intercourse graven deep in our hearts, for which we are indebted to our beloved association? These may not be weighed and measured by scale and rule, but still would alone be sufficient reason for our existence.

Let us turn our faces, then, to the bright future of our country and our association. When the rising sun to-day first touched the easternmost border of our country, it looked down upon the richest and most prosperous nation in the world, and when to-night it shall have cast its last rays on the Golden Gate, and passed on to Hawaii and the Philippines, it will leave behind the most enlightened and progressive people it has ever shone upon—we of our great Republic.

THE PRESIDENT: The next business in order is the annual report of the secretary.

SECRETARY'S REPORT.

To the Members of the American Bankers' Association:

The membership and resources of the association have increased as follows:

	<i>Paid membership.</i>	<i>Annual dues.</i>
September 1, 1875.....	1,600	\$11,606
September 1, 1885.....	1,395	10,940
September 1, 1895.....	1,570	12,975
October 1, 1903.....	7,065	76,538

The interest on \$10,000 Government 4's, 1925, \$400, makes a total income of \$76,938.

In the past year 313 members have been lost through failure, liquidation, and withdrawal from the association, reducing the membership September 1, 1902, to 5,923.

1,139 members have joined since September 1, 1902, making a net gain over last year's total membership of 826, which is the largest number of banks ever added to our rolls in the same space of time.

The total membership is composed of

2,944 private bankers and banks with a capital and surplus below.....	\$50,000
1,501 banks with capital and surplus between.....	\$50,000 and 100,000
1,330 banks with capital and surplus between.....	100,000 " 500,000
357 banks with capital and surplus between.....	500,000 " 1,000,000
333 banks with capital and surplus of.....	1,000,000 and over.

The aggregated capital, surplus and undivided profits of our members amount to \$10,547,230,405.

Respectfully submitted,

Oct. 1, 1903.

JAMES R. BRANCH, *Secretary.*

THE PRESIDENT: The next business in order is the annual report of the treasurer, Mr. Geo. F. Orde.

TREASURER'S ANNUAL REPORT.

CHICAGO, Ill., September 1, 1903.

To the American Bankers' Association:

Gentlemen—I have the honor to submit the following report of receipts and disbursements since the beginning of the current fiscal year, viz., September 1, 1902:

To CASH.		By CASH.	
1902—Sept. 1.		1902—Sept. 1.	
Standing protective committee....	\$38,199.65	Balance	\$63,718.52
Committee on fidelity insurance....	2,000.55	Proceeds of \$10,000 U. S. Reg. five	
Committee on education.....	7,693.92	per cent. bonds of 1925, at 135 3-16	
Committee on uniform laws.....	55.50	net.....	13,518.75
Trust Company Section.	478.88	Interest on bonds.....	700.00
Savings Bank Section.....	696.50	Proceeds sale of 17 copies trust	
Expenses of New Orleans conven-		company forms.....	208.08
tion.....	5,761.42	Proceeds set of "Bulletins".....	25.00
Proceedings, 1902.....	3,962.74	Dues from 1,067 members 1902-03...	7,436.45
Distributing proceedings, 1902.....	1,135.97	Dues from 2,112 old members paid	
Circular letters (23,650).....	180.79	in advance for 1903-04.....	23,255.00
Stamped envelopes.....	1,111.54	4,563 bills for membership dues for	
Printing, stationery, etc.....	324.06	the ensuing year (subject to the

The National Bank of Commerce, New York, holds for account of the American Bankers' Association \$10,000 U. S. registered four per cent. bonds of 1925, at a market value of \$13,500.

Respectfully submitted,

Geo. F. ORDE, Treasurer.

THE PRESIDENT: If there is no objection, the report will be referred to a committee for audit, this committee to consist of Mr. Cambell, of the Hanover National Bank, New York; Mr. McAlister, of the Franklin National Bank, Philadelphia, and Mr. George M. Reynolds, of the Continental National Bank, Chicago. This committee will submit their report later.

The next business is the report of the executive council by Chairman E. F. Swinney.

REPORT OF EXECUTIVE COUNCIL, BY E. F. SWINNEY, CHAIRMAN.

Mr. President, Ladies and Gentlemen—The report of your various committees will give in detail the work of the association for the last year. The statement of the secretary shows that the membership has grown in a most satisfactory manner, especially when we take into consideration that a large majority of the banks were already members.

The income of the association has increased, but not in proportion to the expenses, the main item of expense being that of the protective committee, on account of the running down and breaking up, to a large extent, of organized bands of dangerous criminals, who worked in all sections and perpetrated some of the most daring robberies ever undertaken. The report of the committee will give full detail as to the work, and the association is to be congratulated on the signal success in this direction.

At the meeting of the council in New York last spring a committee was appointed to take up the question of revising the dues of the association. This report will be presented to you, and the council unanimously urges its passage.

The work of the currency committee appointed by the President under resolution passed at New Orleans is clear and to the point and their suggestions are well worth the careful consideration of the association, and the council would unanimously recommend its approval by the association. This committee being composed of financiers of national repute from all parts of the United States, their views naturally represent what they consider the welfare of the country at large, and not in the interest of any one particular section. From personal interviews with members of the committee at various times we can appreciate the care and great consideration given the subject and their efforts deserve the highest commendation of the association.

The work of the committee on education is showing its good effects. Their expenses have been decreased and we believe their efforts will bring still better results.

The committee on fidelity insurance offer the following resolution:

AN AMENDMENT TO THE CONSTITUTION OF THE AMERICAN BANKERS' ASSOCIATION,
PRESENTED BY THE FIDELITY INSURANCE COMMITTEE.

An amendment to article 3 of the constitution of the American Bankers' Association by the addition of section 11:

"Sec. 11. The executive council shall appoint a board of five trustees for the management and administration of a fund to be known as 'American Bankers' Guaranty Fund.' Said fund shall be established for the purpose of enabling such of the members of this association and their employees as may elect to become subscribers and contributors thereto and to avail themselves of the advantages thereof to provide, by means of a general co-operation among said members and their employees, a fund from which said members may be reimbursed for losses arising from the dishonest acts of their employees. Said board of trustees shall establish rules and regulations for the government and management of said fund, and the rules and regulations formulated and adopted by the trustees shall be binding upon all the contributors to and beneficiaries of said fund. Vacancies in the board of trustees shall be filled by the executive council and it shall be the duty of the council to annually appoint an auditing committee to audit the books and accounts of said trustees; but nothing herein contained shall be construed as creating any financial liability by the association on account of said fund."

The council appreciates the great efforts the committee has made in working out and considering this question, but after careful consideration of the ills which might arise should the association adopt its report, recommends that it be not adopted.

I would ask that no action be taken on this resolution until after we have the report of the committee on fidelity insurance.

The next resolution will be read by the secretary. This resolution was offered by Mr. Lewis E. Pierson, Vice-President of the New York National Exchange Bank:

The secretary read as follows:

"Resolved, That this association adopt a bank money-order system, and that the president appoint a committee of five to devise a plan whereby members can be furnished uniform bank money orders with proper advertising matter in connection with the same at a minimum cost.

"The report of this committee shall be rendered to the executive council, which is hereby empowered and requested to authorize such expenditure as shall in their judgment be proper to enable the committee to carry out its recommendations."

Mr. Swinney (continuing): The council recommends the adoption of the foregoing resolution.

The following resolution is offered by Mr. Stephen M. Griswold, President of the Union Bank, of Brooklyn, N. Y.:

"Whereas, The practice of paying interest on daily balances to individual depositors has grown to the extent of impairing the prosperity of many of the banks of our country; be it therefore

"Resolved, That it is the sense of this convention that conservative banking demands that no such interest shall be paid,

"Resolved, That the foregoing resolution be referred to the executive council for consideration and action."

The council places the papers desired before the convention.

The next is a resolution from Mr. George Seay, of Scott & Stringfellow, of Richmond, Virginia. This is a long resolution, and in view of the report we will

have from the currency committee, the council would suggest that it be laid upon the table. However, if any one desires it, we can have it read.

J. M. HOLLEY, President Wisconsin Bankers' Association, La Crosse, Wis.: What is the tenor of the resolution, Mr. Chairman?

THE SECRETARY: It is a letter received from Mr. Seay, who is the president of the Virginia Bankers' Association. I will read it, if you desire.

The secretary read the resolution as follows:

Whereas, By act of Congress approved March 14, 1900, the dollar, consisting of 25.8 grains of gold, nine-tenths fine, was made the standard unit of value in the United States, by which the value of all property shall be measured, tested and proved; and

Whereas, By the provisions of the said act the notes of the United States known as greenbacks, amounting to \$346,681,016, together with the notes of the United States known as Treasury notes given for the purchase of silver bullion, amounting at that time to \$86,770,000, all of which notes being used as currency, passing from hand to hand, each dollar for the value of a gold dollar, were expressly made redeemable in standard gold coin: and

Whereas, There are other forms of currency in daily use among the people, passing from hand to hand, each dollar for the value of a gold dollar, equally based upon the good faith and credit of the United States, and equally entitled to be measured, tested and proved by the same standard of value; and

Whereas, It was declared in terms in the said act that all forms of money issued or coined by the United States should be maintained at a parity of value with this standard; therefore, be it

Resolved, That we, the members of the American Bankers' Association, in convention assembled, believe it to be wise that all forms of currency should be made equally redeemable in standard gold coin, and that only by such provision can parity at all times and under all circumstances be effectively maintained, and that failure to so provide for the redemption of all forms of currency alike in the standard unit of value will continue to be construed as a discrimination against such forms as are not made so redeemable, and that we further believe that 'The only thing that can be done to make our financial system sound and safe and solid, is to get down to one legal tender, and that is gold, and then to bank upon a currency circulation enlarged beyond the present authorized issues of the National banks, and based upon the credit of the legitimate trade of the country, and rigidly safeguarded under the law'; therefore, be it further

Resolved, That we urgently recommend That proper laws be promptly enacted to render the gold standard inviolate, and, to that end, that the Secretary of the Treasury be directed to maintain at all times on a parity with gold the legal-tender silver dollars remaining outstanding, and that he be directed to exchange gold for legal-tender silver dollars, when presented to the Treasury.

That the coinage of one million and a half of silver dollars per month, now required by law, should cease.

That the Secretary of the Treasury should be authorized to coin the silver bullion in the Treasury into such denominations of subsidiary silver coin as he may deem necessary to meet public requirements, and, as public necessities may demand, to re-coin silver dollars into subsidiary coin."

Mr. Swinney (continuing the report of the executive council): In view of the fact that there is already a currency report before the convention, the council thinks it would be wise to lay this matter on the table.

It is the custom to appropriate five thousand dollars to be used by the city in which the annual convention is held, for the purpose of aiding in defraying the expenses. This matter took its usual course, but the bankers of San Francisco declined to accept same, wishing to pay themselves all the expenses for this meeting.

It is useless for the council to make any remarks on this subject. Their extreme generosity and lavish hospitality speak for themselves.

The report of the committee appointed last spring in regard to revising the dues of the association will also come in here.

The secretary read the report referred to, as follows:

San Francisco, October 21, 1903.

To the Executive Council, American Bankers' Association:

At a meeting of the Executive Council, American Bankers' Association, held in New York city in the spring of 1903, the undersigned were appointed a committee to consider and report to the council regarding the increase in dues of members of the association.

Your committee have given much time and consideration to the subject. The conditions existing show a disbursement account of the association largely in excess of the income. Last year the income was slightly over seventy thousand dollars, and the expense account was something over ninety thousand dollars. With this condition, it is necessary, unless we curtail the work of the protective committee, to increase the dues. The protective committee shows such practical results and is such a striking feature of the association that the logical duty of the committee is to frame a plan for the equitable increase of income. This we have done on the plan outlined below. The present schedule of annual dues is as follows:

ANNUAL DUES.

Private bankers and brokers and banking firms.....	\$5.00
Banks and trust companies with less than \$50,000 capital and surplus.....	5.00
Banks and trust companies with \$50,000 and less than \$100,000 capital and surplus	10.00
Banks and trust companies with \$100,000 and less than \$500,000 capital and surplus	15.00
Banks and trust companies with \$500,000 and less than \$1,000,000 capital and surplus	20.00
Banks and trust companies with \$1,000,000 and over capital and surplus.....	30.00

Your committee recommends a revision of the different classes of members and establishment of dues for each class according to the following schedules:

CAPITAL AND SURPLUS.	Dues per year.
Below \$100,000	\$10.00
100,000 to \$250,000.....	20.00
250,000 to 500,000.....	25.00
500,000 to 750,000.....	30.00
750,000 to 1,000,000.....	40.00
1,000,000 to 2,000,000.....	50.00
5,000,000 and over.....	75.00

Results of these changes will increase the income of the association on the basis of the present membership about \$35,000.

Respectfully submitted,

Chairman: A. H. WIGGIN,
CALDWELL HARDY,
F. G. BIGELOW,
J. L. HAMILTON,
J. R. McALLISTER,
W. L. MOYER,
W. T. FENTON.

The foregoing report was accepted at the meeting of the executive council held October 20, 1903, at San Francisco, and it was voted by the executive council that the resolution be recommended to the association for adoption.

Therefore, under instruction from the executive council of the American Bankers' Association, I beg to offer the following resolution:

Resolved, That the following schedule of membership charges to take effect beginning September 1, 1904, be adopted:

(The dues are stated above.)

THE PRESIDENT: If there is no objection, the report will be received and filed as is customary.

LEWIS E. PIERSON, Vice-President New York National Exchange Bank: Mr. Chairman, I move that the resolution on bank money orders come up for discussion after the address of Mr. Hillyer this morning.

The motion was seconded by R. L. Crampton, of the National Bank of the Republic, Chicago, and was carried.

THE PRESIDENT: The next matter presented by the chairman's report is the resolution relating to the fidelity business, and if there is no objection that matter will be postponed, in accordance with the suggestion of the chairman, until we have the report of the committee on fidelity insurance.

The next matter is the action of the currency committee, whose report has been presented by the council with the recommendation that it be adopted. Mr. Wiggin has offered a resolution that the report, endorsed by the council, as to the readjustment of the dues of the Association, be adopted. Does that meet with a second?

The motion was seconded.

THE PRESIDENT: It was moved and seconded that the report of the committee on dues, readjusting them, as endorsed by the executive council, be adopted.

The resolution was unanimously adopted.

THE PRESIDENT: The secretary will now read the report of the currency committee, which is referred to in the report of the chairman of the council.

The secretary read the report of the currency committee, as follows:

REPORT OF THE CURRENCY COMMITTEE.

To the American Bankers' Association—As instructed by the Special Currency Committee appointed at New Orleans to investigate and report on the present currency system of the United States, the chairman of this committee not being in attendance at this convention, I beg leave to submit the following report:

There is at present more real money in the United States than at any previous period in our history. Taking the country altogether there is no scarcity of money, including United States and National bank notes, to meet any legitimate demands of business. Compared with September 1 a year ago the National banking circulation has increased \$52,827,551.

The general stock of money in the United States September 1, 1903, was as follows:

Gold coin, including bullion in Treasury.....	\$1,267,733,949
Standard silver dollars.....	555,853,494
Subsidiary silver	101,867,228
Treasury notes of 1890.....	17,970,000
United States notes.....	346,681,016
National bank notes.....	418,587,975
Total	\$2,708,693,662
At the same date there was in circulation:	
Gold coin	\$620,375,159
Gold certificates	394,155,919
Standard silver dollars.....	72,959,012
Silver certificates	455,928,384
Subsidiary silver.....	92,870,952
Treasury notes of 1890.....	17,850,254
United States notes.....	335,377,568
National bank notes.....	399,384,930
Total	\$2,388,902,178

making a circulation per capita of \$29.60, compared with \$28.55 September 1, 1902.

In the opinion of your committee the most serious need is the reform of the Sub-Treasury system in such wise that the money withdrawn from the banks for custom duties, as well as internal revenues, shall be deposited in the banks and thus be made available for use in the community from which it has been withdrawn. Such a reform could be inaugurated by giving the Secretary of the Treasury discretionary authority to permit deposits to the extent of fifty per cent. of the capital and surplus of National banks of customs receipts as well as internal revenue receipts guaranteed by securities acceptable to the Secretary of the Treasury. Such an arrangement would render impossible the embarrassments which have frequently occurred as the result of Treasury accumulations.

Regarding the question of circulation, the first and most important requirement is the immediate repeal of the present limitations of \$3,000,000 per month upon the withdrawal of circulation, so that the expansion and contraction will be automatic and governed by the surrounding situations. Under the present restrictions many banks are unwilling to issue currency for temporary and legitimate needs, which they would issue if they felt certain that their currency could be retired when no longer needed.

Emergency circulation could, within careful limitations, be safely permitted upon the actual deposit with the Treasury department of securities acceptable to the Secretary of the Treasury. And upon such deposits circulation could be issued promptly to meet actual emergencies, which would not be possible if time were taken for the examination of general assets by the Secretary of the Treasury and Comptroller of the Currency. A tax of six per cent. per annum should be imposed upon such emergency circulation to ensure and hasten its return to the issuing bank; this tax to be set aside as a safety fund to secure the United States Treasury for the redemption of notes so issued. This emergency circulation should be issued without any distinguishing mark from other National bank circulation except to substitute the words "secured by bonds approved by the Secretary of the Treasury," instead of the words "Bonds of the United States," for, being amply secured, there should be no discrimination against it beyond the six per cent. tax.

To further liberalize the circulation, your committee recommends that the United States tax on circulation should be uniform on the issue of currency based on all classes of United States government bonds.

In the judgment of your committee these modifications of law can be authorized without damage or discredit to the National bank circulation, but your committee cannot recommend any step that will tend toward a return to the miscellaneous circulation which prevailed in the country before the war, or any step which will disregard the history of finance among the commercial nations of the world, nor can it recommend that any note should be issued without the certainty of its redemption in standard coin of the United States.

The above report is signed by

CHARLES S. FAIRCHILD,
H. C. FAHNESTOCK,
MYRON T. HERRICK,
HOMER S. KING,
J. J. MITCHELL.

In the foregoing report I am impelled to dissent from the recommendation for the repeal of the law restricting the redemption of National bank circulation to \$3,000,000 a month, for the reason chiefly that it seems to me to be inconsistent to in the same report recommend a method for an increased circulation and to insert a provision urging a means by which the circulation may be at any time diminished.

With the exception of this dissent the foregoing report has my hearty concurrence.

Respectfully submitted,

GEO. Q. WHITNEY.
JAS. R. BRANCH, Secretary.

THE PRESIDENT: In order that the members may familiarize themselves with the report of the currency committee, and be prepared to vote on it intelligently, and give them time for such consideration as they desire, action on it will be postponed, and it will come up under the head of unfinished business Friday morning.

D. A. MOULTON, Vice-President Corn Exchange National Bank, Chicago: Mr. Chairman, I would like to enquire if that report provides, among other recitals, that the emergency circulation shall draw interest at the rate of six per cent. It bears certain recitals. I do not think it bears that, which was the most important, to my mind.

THE PRESIDENT: We will be glad to furnish you a copy of the report, and take that up when we come to discuss it.

The next matter is the report of the protective committee. I am sorry to say that the express company, owing to the great distance these had to be sent, probably, has failed to deliver copies of this report.

REPORT OF THE PROTECTIVE COMMITTEE.

The protective committee begs to submit the following report of the work committed to its care by the executive council for the year 1902-1903:

Balance as per treasurer's report, September 1, 1902.....	\$1,764.35	
Appropriated by the executive council.....	36,000.00	
		<hr/> \$37,764.35
Paid account expenses, 1901-1902.....	\$2,009.96	
Paid account expenses, 1902-1903.....	36,189.69	
		<hr/> \$38,199.65
Total expenditures	\$38,199.65	
Total receipts	37,764.35	
		<hr/>
Balance at debit, September 1, 1903.....	\$435.30	

Keeping pace with the membership of the association, which has increased in the last five years from 3,385 in the fall of 1898, to more than 6,900 in the fall of 1903, the volume of reports, letters, etc., presented for the consideration of your protective committee has grown from 2,000 in 1898 to more than 4,900 which have been considered by them from September 1, 1902, to September 1, 1903. From these have been compiled one hundred and twenty-one circulars of information, which have been forwarded in pamphlet form to members throughout the country, accompanied by forty-eight photographs and descriptions of active criminals selected by the detective agents of the association for purposes of warning and identification.

Special circulars have been issued in two instances, as follows:

In January, 1903, on account of the frequent attacks by "yegg" burglars on banks in towns and villages with little or no police protection, and as it had come to the notice of the protective committee that several members whose signs had been lost or were not readily seen had suffered attack in consequence, a circular was sent to members throughout the country with special information and precautionary advice, urging them to keep their membership signs prominently displayed at the paying teller's window. Several requests to replace lost signs with new ones followed the issue of this circular, and a notable instance of the need of so doing occurred when a band of "yeggmen" who had been active in safe robbery in several States made their first attack, so far as known, upon a member of the association—the First National Bank, of Irwin, Pennsylvania. For some time prior to the attack this bank had been without its membership sign, which had been broken and never replaced. On the night of December 8 its vault was blown open and robbed of \$18.30 in loose cash, together with stamps and bonds placed with the bank for safe keeping. The detective agents of the association traced out the perpetrators, some of whom were directly sentenced for this work, while the others have been sentenced for offenses elsewhere committed. In another instance, at Princeville, Illinois, burglars who had entered the Auten & Auten Bank with heavy tools stolen for the work, accidentally discovered its sign of membership, and, placing it upon the paying teller's counter, abandoned their purpose to attack the safe. Subsequently the same men, three in number, successfully attacked the safe of the First National Bank, Abingdon, Illinois, a member of the association, whose sign, as they declare, they did not see. They secured \$5,049 from the safe, but were arrested shortly afterward, and the agents of the association secured the return of a considerable portion of the stolen money. Two of the men have been sentenced, while the third is held for a later term of court.

In July, 1903, a special circular was sent through the country offering rewards aggregating \$800, of which the Governor of Missouri offered \$300, William A. and Robert A. Pinkerton, conjointly, \$250, and the American Bankers' Association \$250, for the detention and surrender of William Rudolph, who escaped on July 6 from the St. Louis prison, where he had been confined with George Collins, charged with murder. On the night of December 26, William Rudolph and George Collins forced the safe of the Bank of Union, Missouri, and secured about \$12,000 in cash, which they secreted at the house of Frank Rudolph, a relative of William, in the outskirts of the adjacent town of Stanton. An operative traced the men to the Rudolph house, secured warrants for their arrest and a search of the premises, and approached the house for this purpose on January 24, in company with three local officers. Apprised of their approach, Rudolph and

Collins made a sudden attack upon the officers when they had reached the door. The detective was shot down and the local men put to flight. Rudolph and Collins escaped temporarily, and it was not until March 1 that their capture was effected at Hartford, Connecticut, by the detective agents of the association and police. More than \$9,000 of the stolen money was recovered, part of it being found at the Rudolph house and \$8,685 being secured from the prisoners at Hartford. Soon after their arrest they were transferred to Missouri, and held in the St. Louis Prison for safe keeping. Just prior to the date set for their trial Rudolph was enabled to escape through a skylight while a disturbance among the other prisoners diverted the attention of the prison guard. The trial of Collins was duly held, and on July 21, at Union, Missouri, he was convicted of murder in the first degree, and sentenced to be hung. His execution, originally set for August, has been delayed by an appeal of the case.

In the matter of the attack upon the First National Bank, Cobleskill, New York, which resulted in the death of the town watchman, November 26, 1900, and the subsequent capture of the five living marauders, the committee has now to announce, in addition to the sentence of Edward Jackson last year reported, the sentence of John Murphy to life imprisonment, the electrocution of James P. Sullivan, March 24, 1903, and the electrocution of William O'Connor, July 7, 1903. William Harris, witness for the State, who has been confined since March 17, 1901, recently escaped from the new Schoharie County Jail.

The important Winnemucca matter, so fully treated heretofore, involving as it did the operations of an outlaw band of train robbers, and enlisting the co-operation of the railroad officials, has resulted in the practical annihilation of the band. Two of its members, now at large, who were engaged in the attack on the First National Bank of Winnemucca on September 19, 1900, are reported exiles who dare not return to the United States, while the third man at liberty, who is also in hiding, is an escaped prisoner, having broken from the Knoxville Penitentiary on June 27, after he had been sentenced for twenty years for passing bank notes stolen in incomplete form in a train robbery, and later completed by forgery.

Similar to the Winnemucca robbery was the robbery of the Stockgrowers' Bank, Bridger, Montana, on December 2, 1902, at noonday, when Jesse Linsley, Patrick Murray and William Countryman rode directly to the bank from the outlying country, and, covering with their revolvers the cashier and one townsman who was in the bank, took possession of \$2,338 exposed money and fled. In this instance however, the men were trailed into the mountains and arrested by the Carbon County sheriff. Their conviction followed, and Jesse Linsley and Patrick Murray were sentenced to eight years each and William Countryman to one year in the penitentiary at Deer Lodge.

Including the expensive cases mentioned above, sixteen members have been robbed by burglars and outlaw raiders, and eleven have been unsuccessfully attacked. from September 15, 1902, to September 15, 1903, with a total loss of \$49,420.23, comparing favorably with the reported losses of \$137,311.28 suffered by non-members, fifty-seven of whom have been robbed and forty-one attacked without success.

The attacks upon members have been exhaustively investigated. Thirty-three robbers implicated therein have been arrested and twenty-six have been sentenced to varying terms of imprisonment. In addition, five "yeggmen" arrested during previous seasons were this year sentenced. In some instances bands known to be guilty of attacking members have been arrested for other offences, convicted and sentenced, with the co-operation of the detective agents of the association, because their conviction in the matter of direct interest would have been difficult, if not impossible. One band of four men convicted during the year operated last year at Holland Patent, New York, where it made an unsuccessful attack upon the safe of the First National Bank.

The only operation by sneak thieves upon the association occurred when Philip Lamble stole \$255 from the National German-American Bank, St. Paul, Minnesota, on August 19, aided by a confederate at the telephone, whose purpose was to call the paying teller from his cage, and followed this on August 22 by stealing \$835 from the First National Bank, Kansas City, Missouri, in the same manner. The agents of the association had secured clues to the identity of the thieves, when, on September 1, while operating the same method at Milwaukee, Philip Lamble was discovered at the Germania National Bank, pursued and cap-

tured. A package of bills amounting to \$500, which he attempted to steal, was recovered.

Following are a few brief and suggestive items bearing on the work for the past year:

1. Robbers who were arrested for attacking a member did so, they declare, in ignorance of its membership. Their statement is credible because they had previously abandoned their purpose to attack a member, from which they withdrew upon the accidental discovery of its membership sign.

2. A band of "yeggmen" who had, heretofore, carefully avoided members of the association, attacked one last winter. It has been since discovered that the bank had broken its membership sign and been without one for several months.

3. Fourteen members of the association were robbed by burglars during the season, with a resultant loss of \$43,686.18, while fifty-seven successful attacks upon banks not members of the association resulted in a reported loss of \$137,311.28.

4. From May 1, 1895, to September 15, 1903, members of the association have lost \$140,021.73 by the operation of burglars and thieves.

5. From May 1, 1895, to September 15, 1903, banks not members of the association have lost, as reported, \$930,749.75 in the same way.

6. The only forgery organization that operated upon a member during the past season was broken up at the start by the arrest and conviction of its members. There is no similar organization in the field, so far as known.

The culmination of an expensive forgery case was reached this season in the disruption of a new organization led by John S. Brush, a forger of considerable skill, derived years ago in the association of a band of clever penmen, who have been driven out of the business since the formation of the protective feature of the association. The arrest of Brush is the result of two years' work to fix the responsibility for occasional clever forgeries, dating from August, 1900, reproducing the signatures and endorsements of bank depositors in a manner to throw suspicion on employees having access thereto. In August, 1900, a member was defrauded in New York city, and attempts were made on two members in Newark, New Jersey, where the presenter was arrested and later sent to the penitentiary. In December, 1901, two more banks, members, were defrauded in New York city, but although a careful investigation directed suspicion toward Brush, no evidence could be had until the fall of 1902, when he resumed operations on a broader scale, with George Ross as middleman and Alfred Hearst and Alexander Stone as presenters of his forged checks. So careful was Brush, however, that several banks were operated upon before the evidence would warrant his arrest, which was accomplished December 29, followed by the apprehension of his helpers. George Ross gave evidence for the State, and the other men pleaded guilty. In consideration of his advanced age, sixty-two years, and the long terms previously served by him, Brush was only sentenced to five years in State's prison. Alfred Hearst received a similar sentence, and Alexander Stone was sent to the Elmira Reformatory.

Reports have been received involving the operations on members of the association from September 15, 1902, to September 15, 1903, of one hundred and forty-five forgers and swindlers, sixty-five of whom have been arrested. Twenty-one of these have been sentenced, while for operations previous to this season there have been seven forgers and swindlers convicted and sentenced. In addition, one forger, who previously served a term for defrauding a member of the association, was arrested while preparing to go on the road with bogus letter-heads and drafts. The detective agents of the association were prepared to connect him with a series of swindles recently committed, and he pleaded guilty and was sentenced to the penitentiary for a term of four years.

Many of the successful bank swindles contain an element of the confidence game, and could be easily prevented by bank officers. In this class is the work of an annoying swindler who is now at large. As a stranger, newly arrived in town, he will express his intention of opening an office, and will make some apparent preparation to commence business. Without other formality than the introduction of his prospective landlord, an initial cash deposit and a plausible story along the above lines, he is permitted to deposit drafts for considerable sums, which are found to be fraudulent after he has drawn the greater portion of his supposed balance and left town.

Following is the detailed financial statement of the protective committee from September 1, 1902, to September 1, 1903:

RECEIPTS.

Balance, as per treasurer's report, September 1, 1902.....	\$1,764.35
Appropriated by the executive council.....	36,000.00
	<hr/>
	\$37,764.35

EXPENDITURES.

Paid Pinkerton expense incurred prior to September 1, 1902.....	\$1,709.96
Other expense incurred prior to September 1, 1902.....	300.00
Paid Pinkerton expense from September 1, 1902, to September 1, 1903.....	30,989.69
Salaries and expenses as per vouchers.....	4,902.00
Paid T. Hanrahan & Co., 1,000 aluminum signs.....	122.50
Paid Stumpf & Steurer, 1,000 protective pamphlets and expressage.....	113.50
Paid L. W. Lawrence, 300 ruled and printed forms.....	7.00
Petty cash	55.00
	<hr/>
	\$38,199.65
	<hr/>
Balance at debit.....	\$435.30

The protective feature of the American Bankers' Association has been in operation since the Fall of 1894. It has fully justified itself in every particular save that of suppressing the "yeggmen" who, as a class of criminals, have become important in the past few years. The operations against these enemies of small banks have been difficult, tedious and expensive. The committee has left nothing undone to break up these gangs of "yeggmen," but it is evident that much labor and expense will be involved in this feature of the protective work in the future. Bankers in small towns should be on their guard and should make preparations to act promptly and intelligently in defense when attacked, and in the effort to capture the criminals.

We append the report of the Pinkerton National Detective Agency, which is distributed among the members in printed form, and will follow this report in the proceedings of the convention. Respectfully submitted,

PROTECTIVE COMMITTEE,
AMERICAN BANKERS' ASSOCIATION.

The next report is the report on fidelity insurance, by Mr. John L. Hamilton.

Mr. Hamilton, of the committee on fidelity insurance, submitted the following report:

REPORT OF COMMITTEE ON FIDELITY INSURANCE OF THE AMERICAN BANKERS' ASSOCIATION.

To the American Bankers' Association:

The committee on fidelity insurance begs to report that, in pursuance of a recommendation made by the executive council at the Denver meeting in August, 1898, and adopted by the association, "That a committee of this association be appointed to inquire into the rates of surety bonds and to recommend a standard form of policy, and to consider any plan or plans that may be submitted," we have endeavored to carry out the wishes of the council and the association to the best of our ability.

The committee in this work has endeavored to be absolutely fair with all parties interested, and has endeavored to consider without partiality the equitable rights of the employees, the employers and the fidelity companies, and in its reports has endeavored to point out the true conditions as they have been found to exist from the carefully-gathered statistics reported to us confidentially by the banks of the country. We are satisfied the information we have is the most reliable of any to be had in the United States.

RATES.

The committee wishes to emphasize the fact that since its appointment in 1898, and the careful study of its reports by many of the members, the rates for writing bonds have become more uniform and have been reduced fully twenty-five per cent., resulting in the annual saving to the members of the association alone of \$132,368.50, a sum of money almost double

the annual dues of this association, to say nothing of the benefits the efforts of this committee have been to non-members, which would easily equal that of the saving in premium to the members.

FORM OF POLICY.

We have had prepared by the best legal talent the American Bankers' Association copyrighted form of bond. This bond, we believe, is the best form of bond written to-day. It is equitable to the insurer and the insured, and gives protection to the bank. We are convinced of its merits, as there has never been, to the knowledge of this committee, a contested loss on this form of bond, and there have been cases where, on the same risk, other forms have been contested and the association form paid.

Another proof that our form of bond is superior is the fact that all fidelity companies, with three exceptions, exact a higher rate than on their own form for obvious reasons. We need to advance no stronger argument why our members should use the association's form.

Another proof of its merits is that forty per cent. of the members of the association have adopted it after a careful examination of its provisions by their attorneys. This is the only bond written that has to stand upon its own merits, as fidelity companies never offer to write it unless the banks insist upon having it.

An advantage to members who use the association form of bond is that it is being universally adopted and thereby secures uniformity to banks in case of litigation.

PROTECTION DEMANDED.

The Comptroller of the Currency and the banking departments of many of the States insist, and the laws of some of the States require, that banks bond their employees, not only for the protection of their stockholders, but for the protection of their customers as well.

The apparent desire of corporate fidelity insurance or bonding companies to discriminate against the American Bankers' Association copyrighted form of bond has led this committee to recommend that the American Bankers' Association establish what may be known as the American Bankers' Guaranty Fund, under the management of a board of trustees to be appointed by the executive council, to guarantee the fidelity of the employees of those banks only that are members of the association.

From our reports we have learned that our members are carrying \$133,705,570 in bonds, and are paying annual premiums of \$388,779.33 against a loss averaging for the past ten years not to exceed \$45,000 per annum. We are convinced that the bankers of this country are paying an excessive rate for this insurance, and our convictions are supported by statistics of English companies covering periods of thirty-seven and thirty-eight years respectively. We are convinced that it is not good policy for the American Bankers' Association to single out and authorize the secretary, or any one the association might see fit to appoint, to solicit business for some particular bonding company, as is now being done by many State associations, for a commission which is paid into the treasury of the organization. This method carries a moral guarantee at best, of any company that may be selected, and places the association in a position which in time might bring serious embarrassment.

Your committee, having carefully studied conditions here and abroad, and having gathered statistics as complete as possible, reported to the executive council and the New Orleans convention that unless it was the purpose of the association to put the information to some practical use, the committee be discharged. It was decided by the executive council that this committee continue its labors for another year, and that its report be published in pamphlet form and sent to the members of the association, calling the attention of the members especially to this report and asking for their approval or disapproval. Not having a complete list of our members, we sent our report to all bankers of the United States, and in answer to our inquiries received replies from forty-two hundred and fourteen (4,214) members, or about two-thirds of this association, reporting favorably to the association taking up the work; three hundred and ninety-three (393) reporting unfavorably, while two thousand and ninety-six (2,096) of the members, or less than one-third—mostly private bankers and bond brokers—were indifferent and did not answer our inquiries. From non-members of the association we received twenty-seven hundred and sixty-nine (2,769) replies, and of this number twenty-seven hundred and fifteen (2,715) favored the scheme, while fifty-four (54) opposed. A majority of those banks not members favoring the proposition wrote that if suitable plans were adopted by the association they would become members thereof. Ninety-one and one-half (91½) per cent. of those answering favored the proposition, and ninety-eight and one-tenth (98.1) per cent. of the non-members answering favored the proposition. Sixty-nine hundred and twenty-nine (6,929) members and non-members are favorable to the proposition, while four hundred and forty-seven (447) have expressed themselves as unfavorable. Ninety-three and nine-tenths (93.9) per cent. of the answers received are favorable to the association taking up this line of work.

RECOMMENDATION.

The executive council at New Orleans decided that if a majority of the banks, members of the association, were favorable to this proposition the committee should consider and recommend the best plan for the association to adopt in the bonding of its employees, and prepare rules and regulations governing the same. In compliance with said directions we have prepared and filed with the secretary of this association an amendment to article three (3) of the constitution by the addition of section eleven (11), creating the "American Bankers' Guaranty Fund," controlled by a board of five trustees to be appointed by the executive council. Having considered the different forms of corporations, and owing to the conflicting laws of the different States, under advice of the best legal talent we have decided that there is only one safe and practical way to bond employees, and that is by the creation of a guaranty fund in the hands of trustees. In this manner members will be furnished indemnity, amply secured by a trust fund, giving better protection than they now have and ultimately, we believe, at a rate not to exceed one-third the average rates now paid.

Your committee is convinced of the practicability of this plan. It is not an untried experiment, for it has been in practical operation in England for thirty-eight years under the Bankers' Guaranty and Trust Fund, and for thirty-seven years under the Colonial Trust Fund. The number of employees bonded in the Bankers' Guaranty and Trust Fund is almost identical with that of the membership of this association. The average losses in this country vary only seven cents on the \$1,000 from that in foreign countries, as shown by statistics gathered by this committee.

In addition to these companies we have the evidence of the Union Bank of London, which established a fund in 1890; the London City and Midland, which established a fund in 1889; the Bank of Scotland's Guarantee Fund, established in 1869; Glynn's Guarantee Fund, established in 1865, and the Bank of England's Guarantee Fund, established in 1841. All these funds have and are being successfully managed and are highly recommended by the leading banks of England; and in our own country we have the Adams Express Company and the American Express Company, who bond their own employees.

Your committee has prepared rules and regulations for the government of such a fund, similar to those that are successfully used by the English trustees, changing them sufficiently to meet the conditions here. We recommend for the protection of the stockholders and customers of the banks, members of this association, that they be adopted.

The members of your committee wish in this, our last report, to thank the officers and members for the many courtesies shown us. We also wish to thank the non-members who have so promptly and cheerfully responded to our inquiries. And we hope that those who have criticised us may eventually be convinced that we have endeavored to do what we considered for the best interests of the American Bankers' Association.

Respectfully submitted,

JOHN L. HAMILTON, CALDWELL HARDY,
F. H. FRIS, W. P. MANLEY,

A. C. ANDERSON,
Committee on Fidelity Insurance.

THE PRESIDENT: The report of the committee is before you, gentlemen, and the recommendation of the executive council in regard to the constitutional amendments will now come up for action.

MR. BARTLETT: I move that the report of the committee be received, and that the committee be discharged with the thanks of this convention.

The motion was seconded.

GEORGE L. RAMSEY, Cashier Union Bank and Trust Co., of Helena, Mont.: Mr. President, and Gentlemen of the Convention—I appreciate that it must seem that a man has a good deal of self-assurance to rise here and speak against a carefully-thought-out report, such as is the report of the committee we have just heard; but feeling that it is worth the while of the bankers of this country to consider a little before going into the insurance business, or anything that savors of it, I want to submit a suggestion that we should consider a little carefully before adopting the recommendation of the committee. The report is carefully written and thoroughly covers the ground, but several features contained therein, it seems to me, have not been brought to the attention of the members of this association properly.

I feel that bonding our own employees is something that savors of the

insurance business, and is quite diametrically opposed to banking. Insurance is a hazard. Bankers are not supposed to take anything more than minimum hazards, and it occurs to me it would be better to leave this business to the surety companies that are organized throughout the country than to adopt it ourselves.

The purpose of this committee has been carried out, I believe, and has been completed in bringing to the attention of the bankers the value of a form which is adopted, and which is a good one, and which most all surety companies write. But there has been at work a more powerful influence than the committee in reducing the cost of fidelity insurance in this country, and that is the competition between the companies. At present it is so keen that the rates are down to a reasonable figure, and down to a point where the surety companies of this country are paying out in expenses and losses ninety-one per cent. of every dollar they take in for their fidelity insurance to banks. It leaves just a small margin for profit, and I do not believe that the bankers' association could do much better than that, except, perhaps, in the reduction of expenses. I understand the plan is to reduce expenses by not making entry in the different States of this country. Most of the States require an annual license fee before an insurance company can do business, and I understand it is not proposed by the Bankers' Association to make an entry, but to run the business from some central point like Chicago or New York. The danger of that is this, and the reason why State governments require insurance companies to pay license fees and take out charters, and so forth, is in order that they may have attorneys in the different States, upon whom service may be made; so that, if you get into a dispute with an insurance company, and they do not want to pay, you will not have to go to the home office, but you can bring suit against the company in your own State, and the insurance company must come to your State to fight the claim.

It seems to me that this is an important point, because, as human nature exists everywhere in the same old form, there are bound to be disputes between the executive committee of this fidelity department and the various individuals whom it insures.

Now, if you have a dispute, upon whom are you going to serve process? Against the American Bankers' Association? You would have to serve it individually on the various members, or you would have to go to the home office. If you have had the experience of instituting lawsuits at distant points, you know what that means; you know what it means to go to some distant city. As it is at present, every one of you with a claim against these bonding companies throughout the United States can serve the process against the particular attorney in the particular State, and the company has to bring its attorney. This is an important point, and one worthy of your consideration, it seems to me.

I feel that many points could be brought out in a brief way. Yet the time of this association is valuable, and I do not believe I have the right to take up any more of your attention. I think the committee has performed a valuable service to the banks.

The surety companies are in fierce competition for the business, and as long as they continue so we should be contented. If they form a combination, then will be the time for the American Bankers' Association to do something in retaliation; but it is not necessary at this time, and it seems to me, an inappropriate and unharmonious idea for the bankers of this country to take part in the insurance business, which involves such a hazard.

MR. BARTLETT: Mr. President, to avoid misapprehension I wish to say that I agree with every word that the gentleman who has just spoken has said. My motion was not that the report be adopted, but that it be received, and that the committee be discharged, with the thanks of the convention.

At the appropriate time, and I assume that this is not the appropriate time, there being no motion upon which we are now called to vote, I wish to have something to say along the lines of the remarks so ably made by the gentleman who has just spoken, in proposing any departure from the high and exalted plane occupied by this association, to the undignified scramble now going on between the surety companies to secure a little more of this bonding business. I apprehend that this is not the time to address remarks to the proposed amendment.

MR. HAMILTON: Mr. President—

(Cries of "Question," "Question.")

MR. HAMILTON: I should like to know if I have the right to speak—

THE PRESIDENT: The motion to discharge the committee would seem to preclude any further discussion. The matter comes before the convention upon the recommendation of the executive council that the constitutional amendment offered should not be adopted. The resolution offered by the gentleman who has just spoken, to discharge the committee with our thanks, would obviate the necessity of any further consideration of this matter.

MR. HAMILTON: After a motion has been put and seconded, I believe the members of the convention have a right to discuss it.

THE PRESIDENT: Yes, I should say so, upon the merits of the question, speaking as to whether the resolution to discharge the committee should prevail.

JAMES R. EDMUNDS, Cashier National Bank of Commerce, Baltimore: Mr. President, I rise to a point of order. The committee has made a report, and it has been received by the convention. Therefore, it is superfluous to receive a report that has already been received.

THE PRESIDENT: The question before the convention is the motion to discharge the committee with a vote of thanks, and the receiving of the report was simply an incident in connection with that.

WILLIAM GEORGE, President Second National Bank, Aurora, Ill.: Mr. President, this convention desires an opportunity to discuss this proposition, and many members are laboring under a misapprehension as to when that time will be. The motion of the gentleman on the other side of the house seems to contemplate a laying aside of this proposition. Several of the gentlemen assembled here, I am confident, wish an opportunity to discuss this matter. The committee has gone to great labor, taken great pains to investigate the subject, and I personally believe that we are in favor, as an association, of the adoption of that report, and the carrying out of the suggestions of that committee.

I move that the motion of the gentleman on the other side of the house be laid upon the table.

THE PRESIDENT: It is moved and seconded that the motion of the gentleman who spoke—will you give his name?

MR. BARTLETT: Bartlett.

THE PRESIDENT: It is moved—

MR. BARTLETT: If I am not out of order, but if it will bring the matter up for consideration, I will withdraw my motion. It seems to me that the orderly procedure would be, first, the discharge of the committee, the duties of the committee having come to an end; and then to take up the recom-

mendation of the executive council, to decide whether this amendment should or should not be adopted. My motion went no further than discharging the committee and thanking it for its labors. Now, I am willing to withdraw that motion if it has embarrassed the convention, provided my second will consent, in order that the whole question may come up before the convention for consideration.

THE PRESIDENT: There seems to be a desire to consider the question on its merits, and the matter was legitimately before the convention upon the report of the committee. If the gentleman who has just spoken will withdraw his motion, as he has suggested, and let the matter come up upon the report of the council, that will bring the matter, certainly, before the convention, and it can then be discussed on its merits.

MR. BARTLETT: It was foreign to my intention that the adoption of my motion should table this whole matter, and I therefore withdraw it.

A DELEGATE: What bank do you belong to?

MR. BARTLETT: I have a message from the surety companies. I represent the United States Fidelity and Guaranty Company.

C. P. MILES: This is a bankers' convention, not a surety company convention.

MR. BARTLETT: Have you more than one kind of membership in this convention? do you admit surety companies to your convention, and deny them voice and vote here?

THE PRESIDENT: If your company is a member of the association, you are entitled to speak. The matter is before the convention, whether we shall adopt the constitutional amendment.

WILLIAM GEORGE: Mr. President, I move that the report of this committee be adopted.

MR. DISMUKES: Mr. President, I move that the amendment as proposed be adopted by the convention.

THE PRESIDENT: The question before the convention is upon the adoption of the resolution that the constitutional amendment offered by the committee be not adopted.

MR. EDMUNDS: May we have it read?

The amendment was read by the secretary as follows:

(It is printed above.)

MR. EDMUNDS: I understand that the motion is that that be not adopted?

THE PRESIDENT: That is correct.

MR. EDMUNDS: Would not the proper motion be to adopt the recommendation of the executive council?

THE PRESIDENT: The motion is before the house to not adopt the constitutional amendment. If you wish to offer a substitute to that you can do so.

MR. EDMUNDS: Do we vote on the recommendation, or not?

THE PRESIDENT: We vote directly on the question of whether we adopt the constitutional amendment or not, unless there be a different motion substituted by order of the convention.

MR. EDMUNDS: It does not seem to be straight to me on parliamentary grounds.

THE PRESIDENT: You can make an amendment, if you desire.

MR. EDMUNDS: They make a recommendation, and we should vote on that, it seems to me.

F. G. BIGELOW, President First National Bank, Milwaukee, Wis.: Mr. President, I do not think it makes the least difference. The council has looked into this, and in its view, the amendment should not be adopted; but

a motion to adopt the amendment brings the question as squarely before the convention, and is a perfectly proper motion, I think. I think we ought not to spend time on the edge of this question, but get right at the question itself.

If it be proper, Mr. President, I wish to say a word, having been a member of the council, and having considered it with the other members last night, I wish to say that I do not know of any committee that has done its work more thoroughly than this committee has done its work. Every man on that committee is thoroughly in favor of the plan, conscientiously, honestly in favor of it. Of that there can be no doubt, in my mind. They are all of opinion that it will be a great help to have it adopted in the form they have suggested. I disagree with them on that just as earnestly. I only ask now, and it seems to me appropriate, that this association, individually, and as a whole, you men, one at a time, and the whole body, shall give some little time and some little thought to the consideration of a question that is as important as this. I think it would be inappropriate and paradoxical for you, applauding on the one hand the work that has been done by this committee, to instantly accept its adoption without looking into it yourselves.

Then, again, this association is not a corporation; it cannot sue or be sued. You make no financial responsibility here. You do not go so far—although in effect you almost do—as to seek to make a corporation of the American Bankers' Association, and then deliberately take up the bonding business. But the association, throwing the name of the association around it, gives it a moral support and makes it almost appear that the association were doing it. You appoint trustees, you are compelled to audit their accounts, and in all real senses you father the plan, while not doing it in law. I confess that I do not like that. I do not think it is a good precedent for the association. I am not now speaking to the merits of doing this bonding business, but I am speaking of the method of doing it within yourselves, giving it a quasi, but not a real, endorsement.

The motion now is that this shall become the law of the association, that the amendment shall carry. I think that a motion to refer it to the new council, and then let it be thoroughly considered by the bankers of the country—and I do not deem that it has been thoroughly considered by the bankers of the country—would be a wiser step for us to take. This able report that advocates this in the strongest terms has been sent to the bankers throughout the country, and they have read it, and they have had confidence in the men on the committee who have considered it, and they have simply replied in the affirmative; but, as a matter of fact, the bankers that have said they wanted to go into this have not really looked into it themselves.

I move to amend, if it is in order, by referring this question to the executive council, with the request that they correspond with the members of the association.

The motion was seconded.

J. J. SULLIVAN, President Central National Bank, Cleveland, Ohio: Mr. President, as a member of the council I am heartily in favor of the motion just made. This same subject was submitted a year ago, and was not recommended for adoption. The committee was then continued and instructed to go on with their investigations. The committee has certainly rendered a very valuable work in the investigation of this question, as evidenced by its report here to-day, and I do think the committee is entitled to great credit for the information which it has brought before us, covering this

very important question. I am clearly of the opinion, however, that we should not adopt this report to-day.

The executive council, at its meeting last evening, decided against it. It has given the subject great consideration, and your executive council was not prepared last evening to recommend this for your adoption. I believe that you should give some consideration to the conclusions of your executive council. The subject was discussed in its entirety before the council, and the judgment of that council is against its adoption at this time. Hence, I think the motion of Mr. Bigelow is an eminently proper motion to make—that the entire subject be referred back to the incoming council for its further consideration and report. The move proposed is at variance with the general principles of our organization. However, if we can in our deliberations work out some scheme that will be advantageous to us without varying from the principles of the organization, which will result in great saving to the members of the association, I am in favor of it; but at this time I am opposed to the adoption of the report of the committee and I am very strongly in favor of referring the subject back to the incoming council.

C. Q. CHANDLER, of Kansas: Mr. President, that we should take time to amply discuss this matter, none of us doubt, but that this matter should be referred back to the executive council to be carried over another year, I object. We have had a committee of five eminent gentlemen who have presented a report here that is so plain that it is the A B C of this matter, and there is no reason why this convention right here in San Francisco, before we leave, should not pass upon this subject.

We are not launching out into any new field. Mutual insurance is an old, old thing. The lumbermen of this country are saving themselves hundreds of thousands of dollars every year. The hardware men are doing the same thing. The millers are doing the same thing. And now, I cannot see any reason why we as bankers should not save this money for our own profits. The report of this committee shows that premiums of \$388,000 are paid into the fidelity companies, which the gentleman from Baltimore represents. In turn, those noble companies have given us back \$45,000. The net profits to the Baltimore and other surety companies are \$343,000, net out of our pockets.

I believe we should give this matter careful consideration. If we have not time to discuss it, let us set a date, right here, before we leave, at which it will be taken up intelligently, and at which time no motion can be rail-roaded through by surety company representatives.

(A delegate arose.)

MR. CHANDLER (continuing): I have the floor, partner. The gentleman who first spoke from the stage—I would like to ask what bank he represents.

MR. RAMSEY: I represent the Union Bank and Trust Company, of Helena, Montana.

MR. CHANDLER: He lays stress on the fact that we would not be able to get the proper service if we should have a loss. I anticipate that the five gentlemen to be appointed by the executive council will take care of that, and that they will see that we are protected. This insurance, then, will be a voluntary matter; if you are not satisfied with it, you need not take it. Those that want to contribute to the Baltimore companies may do so, but fix it so that we who want to can have the benefit of this mutual insurance.

R. L. CRAMPTON, Assistant Cashier of the National Bank of the Republic, Chicago: Mr. President, I think it is right to inform the members of this body that the Helena Trust Company is agent for one of the Baltimore trust companies.

MR. HUSTON, of Wood & Huston Bank, Marshall, Mo.: Mr. President, the gentleman who has criticised the work of this committee, at the same time, in the same breath, almost, has said the work of the committee has been most faithful and most efficient, more so than the work of any other committee, in behalf of the association. I think I can say that the chief criticism that I have heard directed against the work of the American Bankers' Association has been that it has failed to accomplish results, that their meetings have simply been meetings of good fellows, who went around the country junketing to have a good time, and did not do anything.

Now, Mr. President, there is no question but what the work of this committee, if adopted in this form, will prove of benefit to the members of this association. On the other hand, if the committee be discharged, simply with our thanks, then everything is undone, and more than undone; because these Baltimore companies, and New York companies, and other fidelity companies, know that this having been voted down once will never be taken up again.

I want to make this suggestion: that if this is adopted we thereby make it possible, not that it is necessary, but that it is possible, for the executive council, at any time hereafter, to put in force the machinery that we will create by the adoption of this resolution. Without that machinery, how on earth can the bankers of the country take this subject up if it is necessary to take it up? These gentlemen tell you the bankers have not had opportunity to examine it. There is no plan to examine until some such machinery is adopted by the association. It is not necessary, even with the adoption of this amendment, for the executive council themselves to take this up, but it is possible, and it will always be possible, then, for them to take the matter up; and as long as the surety companies know that there is a provision in the constitution of the American Bankers' Association to this effect, you may be sure of equitable rates, and you may be sure that you will be heard. But if you cut that possibility out, you will find you will have the same grievances that you had years ago. The difference is the difference between isolation and co-operation. If a bank needs anything, it needs co-operation, and the defeat of this measure to-day, if it indicated anything, would indicate that we do not believe in co-operation—that it is true we meet simply to have a good time, and that we stand apart. I think it is due to this committee and this association that we should at least adopt this amendment, whether we are in favor of it or not.

THOMAS H. WILSON, Vice-President First National Bank, Cleveland, Ohio.: Mr. President, it does not follow that because we have an excellent committee who have given us excellent results thus far, that the committee is infallible in their recommendations submitted here.

Now, it seems to me that \$45,000 as the figures of the defalcations are not truly indicative of the fact about that. It is no disrespect to this able committee to uphold the still larger committee, the executive council, who are equally level-headed.

FRED HEINZ, President Farmers and Mechanics' Savings Bank, Davenport, Iowa: Mr. President, I would like to know by what vote this passed the executive council, whether unanimously or otherwise, and whether there were any members of insurance companies on that council.

THE PRESIDENT: I would state that the vote was twelve in favor of the report as presented, and eight against it.

MR. YOUNG: I move that the convention take a recess until half-past two.

The motion was duly seconded, the question put, and the motion lost.

THE PRESIDENT: The motion to adjourn is lost, and the motion before the house is Mr. Bigelow's motion.

A division was called for.

THE PRESIDENT: Those who are in favor of Mr. Bigelow's motion will rise to be counted, after which those who are opposed will rise. The motion is to refer the matter back to the council.

The question was taken and there were: Yeas, 120; nays, 138.

A DELEGATE: I call for tellers. (The motion was seconded, the question put, and the motion lost.)

J. B. FINLEY, President Fifth National Bank, Pittsburg: Mr. President, may I speak on the original motion?

THE PRESIDENT: The question has now been ordered. I should say it was not in order to speak on this question. We have voted down Mr. Bigelow's resolution to refer it back to the council. The question now recurs upon the original motion.

MR. FINLEY: Mr. President, I certainly think we have a right to discuss the original motion now, not having had an opportunity to do so before. We have been discussing the substitute, and now the original motion is certainly debatable.

(Cries of "Question," "Question.")

THE PRESIDENT: The gentleman may proceed, but he will please make his remarks as brief as possible.

MR. FINLEY: Mr. President, I will say but a few words on this question. I understand, from the statement made by the chairman of the executive council, that last night when this question was considered twelve were opposed to it, and eight members were in favor of it. If that be true, gentlemen, these twelve gentlemen are certainly entitled to your consideration as to their judgment, as well as the eight. Those eight gentlemen were members of the committee, and so were the twelve. I do not know how many members there were in the council. We all have the greatest confidence in the members of the committee. They are men whom I have known for years; but we must have equal confidence in the other members of the executive council, those who are opposed to this. They have considered this carefully in that small body, and more carefully than we have done it this morning. Now, I do not care particularly which way this goes, but I do think this: that you want to carefully consider the question, that the American Bankers' Association should carefully consider whether it wants to go into the insurance business. If they want to go into the fidelity insurance business, why not go into fire insurance for the banks; and if they should go into fire insurance, why not go into life insurance for the banks?

(Cries of "Question," "Question.")

I, for one, am opposed to this, although, as I said before, I am not very particular about it one way or the other. I hope that, as you have put it in the position you now have, you will vote this down.

THE PRESIDENT: The question is on the original motion.

MR. CHANDLER: I only have one word to say, Mr. President. We have the greatest respect for the executive council, we have the greatest respect for their opinions; but while that is true, those who are here in this convention are also thinkers and use their own gray matter.

H. R. LYON, President First National Bank, Mandan, North Dakota: Mr. President, I will speak for just a minute. Here is a discussion on recommendation of the board of directors. It seems to me that many of you are young fellows, and are just jumping right into this without very much con-

sideration. I want to reply to our friend from Kansas City in regard to these mutual companies. I am a miller. The Millers' Mutual Company has nothing to do with our organization of millers. They are a corporation, they are separate and distinct in every way.

I am also a lumberman, and the lumbermen's organization is separate and distinct from such companies.

Now, I think we should go slow on this. There is no reason why we should decide this now before lunch. Let us wait until after dinner. I believe we will not act on this matter as a lot of boys. We are all supposed to be careful, conservative men. I would hate to have a lot of discounts passed on in this way. I simply ask that we appoint some time this afternoon to discuss this. I am willing the matter be passed, but do not let us precipitate action immediately on this thing just because we have a clever committee that has done a magnificent work in preparing statistics for us. We must remember that we also have an executive council who are able men, and we ought to take note of the fact that a majority of them are not in favor if this at this time. So I say, let us give a little more time to it.

WM. FELSINGER, President New York Savings Bank, New York: Mr. President, I do not desire to discuss this question, but simply call attention to the fact that if we are to vote on it, according to the constitution, it will require a two-thirds vote to adopt this amendment to the constitution.

JOHN G. FLETCHER, President German National Bank, Little Rock, Arkansas: Mr. President, I suggest that we vote by States. We know that self-interest sometimes prompts men to do things. I would like to have the States called and a vote taken according to their representation in this body. I make that motion, if it is in order.

A DELEGATE: That is not in order.

MR. FLETCHER: Well, I will withdraw that. I am like my friend from Pittsburg; it matters little with us whether it passes or not. We feel that we can organize ourselves under the suggestion by the committee, without recommendation by this body.

I say, furthermore, that the idea of only paying out \$45,000 in losses and receiving so much, cuts no figure in this question. I have paid insurance on a house for four years, and it has never burned down yet, thank God. I have been paying, as President of the German National Bank of Little Rock, indemnity to these companies for years, and none of the boys have ever stolen a cent. That is no reason why we should condemn this insurance policy business. I am decidedly in favor of insuring our employes in a good company to keep them from going to their friends and having them involved in personal liabilities. That is my idea. I think we might as well go along in the good old way.

I have been attending these national bankers' association meetings for a number of years. I am delighted to meet with my brother bankers from all sections of the country, and I believe, in the main, they will do the right thing. I am opposed to suggesting legislation of that sort in this body. I thank you.

(Cries of "Question," "Question.")

MR. HAMILTON: Mr. President and Gentlemen of the Convention—There is nothing that pleases this committee more than the discussion of this question as it is being discussed by the members of this association. It is one of the most important features that was ever presented to you as a body to consider, and you should consider it carefully. The committee has advocated radical views and radical methods for this association to adopt. We are con-

vinced that we are right. We have considered every question that the gentlemen raised here from every standpoint conceivable, from every point of attack that we could find would be considered, and after careful consideration for eight years we have come to the conclusion that this is the only practical way to do this business.

When that committee was appointed in 1898, the bankers of this country were paying for their bonds from \$1.40 to \$10 a thousand, and the gentleman who paid the ten-dollar rate informed this committee that he enjoyed a special rate from the insurance company, and if we betrayed his confidence he would hold us individually responsible. We informed him that it was no betrayal of confidence on our part to inform him that the same company were rating the same risk for other parties at \$2.50 per thousand.

At the time this committee was appointed, seventy per cent. of the losses were being contested by the fidelity insurance companies. Since the work of this committee has been followed up and studied, and considered by the membership of the association, there are, to-day, but forty per cent. of the losses being contested. At the time this committee was appointed there was not a single bond written by a single fidelity company in the United States that could be collected under any court of law in any State.

The conditions of those bonds have not materially been improved, but it is now policy for the companies to pay. The gentleman here alluded to the fact that the average loss is only \$45,000. He did not understand our position in this matter. The average losses paid are only \$45,000. The losses only amount to in the neighborhood of \$100,000—the bonded loss—to the membership of this association. But actually, the loss paid for the past ten years has not exceeded \$45,000. The proposition of creating a board of trustees to handle this bond is the only practical way that this can be done. This board of trustees would be the custodian of the bonds; they can sue and be sued, they have the same standing in any court of record that any corporation would have, only in a different form of action.

The gentleman spoke here of the possibility of bringing suit against the trustees. That has been provided for in the rules and regulations which are to be adopted by this executive council, if you, in your wisdom, see fit to adopt the amendment to the constitution. I thank you, gentlemen.

THE PRESIDENT: Those in favor of the adoption of the constitutional amendment will please rise, after which those opposed will rise.

The question was taken and the President announced that on this question there were, in favor of the amendment, yeas, 133; nays, 98.

THE PRESIDENT: There not being two-thirds in favor of this motion, it is lost.

J. M. ELLIOTT, President First National Bank, Los Angeles: Mr. President and Gentlemen—Los Angeles is second in prosperity and progress of the cities of the coast, and as regards hospitality it is second to no city in the United States. Some gentlemen who came on the New York excursion with some others have already registered with us as signifying their intention of being our guests on next Monday and Tuesday. We wish every gentleman in this house who wishes to visit us on those days, or either of them, to be good enough to register his name, so that we will know how many guests we will have to provide for, and we will try to provide with a whole heart that comes from the south.

THE PRESIDENT: Gentlemen, I wish to call attention to the constitutional provision, which will be found in the programme. It is as follows:

The secretary read Section 2 of Article III. of the constitution, relating to the appointment of a nominating committee.

The next report is the report of the committee on uniform laws, by Mr. Frank W. Tracy.

In the absence of Mr. Tracy, the report was submitted by his son as follows:

REPORT OF THE COMMITTEE ON UNIFORM LAWS.—BY FRANK W. TRACY, CHAIRMAN.

We have the pleasure to report that we have added to the list two States during the past year—the States of Idaho and Montana. We find it extremely difficult to reconcile the views of the various members of the Legislature in the various States. There is hardly a member of the Legislature but what has his peculiar ideas which he thinks ought to become part of the law, which, if we admitted, we would have no uniform law. As an example, in the State of Nebraska we got the bill nearly through when some members thought it ought to be amended, and it was so thoroughly amended that we had to abandon the support of it. What we want is uniformity in all the States. We also hear the statement quite frequently made that this law is offered because of the fact that it comes from the bankers. During the past year we have proven this statement to be unfounded. In the State of Illinois, in order to test the matter, an agreement was made between your committee and the Illinois Bar Association by which the Illinois Bar Association was to have entire control of the bill, while our committee was to say nothing. I am sorry to say the result was that no bill was passed. But we are not discouraged. We have only to refer to a recent report of the Hon. Lyman D. Brewster, Chairman of the Commission on Uniform State Laws of the American Bar Association, who has lent his time and talents to the furtherance of these measures. He says:

"Ten years ago we presented and recommended for general adoption a uniform law on weights and measures. About the utility of this act it would seem impossible to raise a question. Surely the bushel ought to be uniform throughout the country. Well, it has passed four States in ten years. Our proposed acts on wills and deeds shared about the same fate. Three years ago the Conference ventured into the troublesome region of divorce, and not a single State, so far as I know, has passed our modest proposed law on divorce procedure intended to restrain tramp divorces and to give the defendant an opportunity to be heard in court. On the other hand, as already stated, the Negotiable Instruments Act, in the form of a short code, has been successfully adopted, although thirty-six pages in length. As to its permanency, one can only say that in six years only one or two trivial changes have been made, occasioned by the effect of revenue stamps on sight drafts and the like."

It seems that the law for the adoption of a uniform law for weights and measures, which ought to have no opposition whatever, has only passed in four States, in ten years, whilst we have succeeded in passing our Negotiable Instruments Law in twenty-three States in seven years.

The evolution of the law from a digest into its present practical form is interesting, and I again quote Judge Brewster:

"A studious English lawyer—Mr. M. D. Chalmers, now Parliamentary Counsel to the Treasury, a born draftsman and so far removed from a radical "Benthamite" as it is possible for an Oxford man to be—read over carefully all the reported English cases on the law of bills and notes and put their substance in an admirable digest. This digest proved at once so serviceable that the merchants and bankers of Great Britain insisted that it should be drafted in the form of a code and have the authority of legislative sanction. After its redrafting in the form of a code and a great deal of committee work on it, both in and out of Parliament, by merchants, bankers and lawyers, it was passed in 1882 by both houses as the Bills of Exchange Act. It proved to be a success every way both for laymen and lawyers, and was soon adopted in the British colonies.

"Equally simple and natural was its introduction into the United States. In 1895 a small body of American lawyers appointed by several States—New York State having initiated the movement—for the purpose of promoting uniform State laws on certain subjects wherein existing laws were variant, uncertain and often conflicting, recognized in the English Bills of Exchange Act a convenient and excellent basis for an American law on the same subject, and this partial codification seemed to them, after much study thereon, almost the only practicable method of obtaining the uniformity they were deputed to secure. The result was Mr. Crawford's Negotiable Instruments Law. Mr. Crawford proved so ready and able a draftsman that his predecessor, Mr. Chalmers, said in his address before the

American Bar Association last summer: 'If I could do the work over again I could produce a better act, and I am glad to see that you, in your Negotiable Instruments Act, which has now been adopted by so many States, have in many respects improved on the English measure.'"

The following is a list of the States now operating under the law:

- Connecticut—April 5, 1897.
- Colorado—July 15, 1897. (Notes falling due Saturday are payable the same day, except those falling due in Denver on any Saturday during June, July and August, when they are payable the following Monday.)
- Florida—August 3, 1897.
- New York—October 1, 1897.
- Massachusetts—January 1, 1899. (Three days' grace allowed sight drafts.)
- Maryland—June 1, 1898.
- Virginia—July 1, 1898.
- North Carolina—March 8, 1898. (Three days' grace on notes, acceptances and sight drafts.)
- District of Columbia—April 3, 1899.
- Wisconsin—May 15, 1899.
- Tennessee—May 12, 1899.
- Oregon—May 19, 1899.
- Washington—June 7, 1899.
- Utah—July 1, 1899.
- Rhode Island—July 1, 1899. (Three days' grace on sight drafts.)
- North Dakota—July 1, 1899.
- Arizona—September 1, 1901. (Except by clerical error, chapter on Promissory Notes and Checks omitted.)
- Iowa—July 1, 1902. (Amended to give three days' grace, on each of which demand may be made.)
- New Jersey—July 4, 1902.
- Ohio—June 1, 1903.
- Pennsylvania—July 1, 1901.
- Montana—March 7, 1903.
- Idaho—May 1, 1903.

It is hoped that an earnest effort may be made by each of the bankers of the States noted below, the Legislatures of which meet next winter, to bring to the attention of the legislator of his district the great value of having his act among the laws of the State: Louisiana, Maryland, Mississippi, Vermont.

FRANK W. TRACY, Chairman;
J. B. BROWN,
HOMER A. MILLER.

Committee.

THE PRESIDENT: The next business is the report of the Committee on Bureau of Education.

The chairman, Robert J. Lowry, submitted the following report:

REPORT OF THE COMMITTEE ON EDUCATION.

SAN FRANCISCO, OCT. 20, 1903.

Gentlemen of the American Bankers' Association:

The work of your committee on education during the past year has been devoted largely to the American Institute of Bank Clerks. The constructive period in the history of this institute has been succeeded by the period of crystallization, and the institute, in the opinion of your committee, no longer an experiment.

It gives me pleasure to hand you herewith the report of Mr. J. B. Finley, president of the American Institute of Bank Clerks. There has been no radical departure from the original plan of operation, for this has not been deemed expedient in view of experience for the past years of the institute. Still, the natural law of development has not been ignored, and wherever an improvement on our original plan has suggested itself it has been adopted, when the success of the institute or its efficiency demanded it.

During the past year the institute has suffered a serious loss in the death of its able and enthusiastic secretary, Mr. A. O. Kittredge. He had the institute greatly at heart, and had shaped to a great extent the work, which has progressed so successfully. Since his death, however, others have taken up the work, and your committee feel that it is in good hands. The active management of the affairs of the institute is now in the hands of the Account, Audit and Assurance Company, and the trustees of the institute have considered it advisable

to continue for the present the arrangement heretofore existing for the conduct of the correspondence school of banking and the publication of the "Bulletin."

As you are no doubt aware, the "Bulletin" of the institute is conducted on strictly educational lines, and is intended to be the literary clearing-house of institute work. It is neither a vehicle of banking news nor a magazine of learned financial essays. In its columns the best efforts of individual chapter members and students are published for the benefit of all, and the fact that the "Bulletin" has some 6,000 subscribers is conclusive evidence of its utility as an instrument of education.

Those who have the work in hand are enthusiastic business men, and I feel that the American Bankers' Association cannot do better than to continue this work so auspiciously begun. It is certainly doing a great deal of good in helping those who wish to become efficient bank workers, and to perfect themselves in the science of modern banking. Besides it enables banks and bankers to always have a supply of efficient and capable material from which to select the working force of the banking institutions of the country.

It is hardly worth while to consume your time in elaborating upon the work or the feasibility of the plan. As I stated, its experimental period has passed, and it now becomes the duty of this association to maintain this institute. We want to continue our work along this line, as the results obtained to this time fully warrant us in expecting greater results in the future.

The balance left over from the last appropriation is about \$3,000, same as last year, and your committee respectfully asks the appropriation of \$10,000, or so much as will be necessary to continue the institute and increase the scope of its usefulness in the educational branch of our association work.

ROBERT J. LOWRY, *Chairman.*

AMERICAN INSTITUTE OF BANK CLERKS—REPORT OF THE PRESIDENT.

To the Committee on Education, American Bankers' Association:

The year since the date of the last report to the American Bankers' Association convention in New Orleans has been eventful. It is practically the third year in the history of the American Institute of Bank Clerks, although only two and one-half years of active work participated in by the bank clerks of the country have passed.

The growth of the institute has been rapid, and the soundness of the original scheme has been conclusively demonstrated by the fact that natural evolution has occasioned only adaptations.

As stated in previous reports, the work of the institute is carried on along three distinct but interdependent lines, the chapters, the students of the correspondence school of banking, and the "Bulletin."

The work of the chapter members was in a sense focussed in the chapter convention held at Cleveland, O., Sept. 18 and 19. This was the first meeting of a national character of chapter members, twenty-three out of thirty chapters, numbering some 3,000 members, were represented by 112 delegates, besides which a number of bank clerks, bankers and others attended unofficially.

Papers of unusual excellence by bank clerks were presented, read and discussed with a marked degree of interest, and a showing of intimate and accurate knowledge of the subjects treated developed in the discussion. A spirited debate on a subject of prime importance to banking men was held between representatives of Detroit, Washington and Philadelphia chapters on the one side, and Buffalo, Minneapolis and Providence on the other. The arguments *pro* and *con* were well expressed.

Prominent bankers attended the banquet of the convention and addressed the delegates:

O. H. Stafford, Secretary and Treasurer of the Broadway Savings and Loan Co. and the Woodland Ave. Savings and Loan Co., of Cleveland, O.; M. H. Wilson, Secretary and Treasurer of the Western Reserve Trust Co., Cleveland, O.; C. B. Mills, Cashier of the People's Trust and Savings Bank, Clinton, Iowa.

The proceedings of the convention have been published in full in the October 15 "Bulletin," and it is unnecessary to further repeat them here. The convention was orderly and businesslike in every respect, and compares favorably with conventions of older and more experienced bodies.

The work of the individual chapters during the year has been attended with abundant evidence of benefits to members, largely increased interest on the part of bankers and the general business public, and enthusiasm in the movement is everywhere displayed. Papers of exceptional quality have been prepared and read by members before their respective chapters, published in the "Bulletin," and have attracted wide and favorable attention.

Debates between various chapters have been productive of good results, and have disclosed a number of ready and fluent speakers among the chapter members.

Men of national reputation have gone to considerable trouble to address the various chapters. Bank officers and bankers of prominence throughout the country display an ever-in-

creasing interest and appreciation. State bankers' conventions have included in their proceedings commendatory mention of the institute. At the convention of the North Carolina Bankers' Association, Mr. Caldwell Hardy, president of the American Bankers' Association, said:

"It should be remembered in discussing the advantages of the institute and the expediency of sustaining the work so auspiciously begun, that young men are being trained along the lines of membership in the American Bankers' Association. Up to date, the American Institute of Bank Clerks has been distinctively known as a creature of the American Bankers' Association, and whatever bank clerks have derived from it they have understood to come direct from this fountain source.

It is worth much to the American Bankers' Association as an organization that young men are being thus trained to think of it as their alma mater, and that from which they derive substantial benefits. Every bank clerk who is taking a course in the correspondence school of Banking, or one who is a member of a local chapter, or who is a reader of the "Bulletin," is thus being trained for the high responsibilities of membership and representation in the American Bankers' Association."

Mr. O. J. Sands, president of the Virginia State Bankers' Association, at the recent convention at Richmond, said:

"The American Bankers' Association has taken great interest in the American Institute of Bank Clerks. I commend this work to all our banks and their employees. This institution gives every ambitious clerk opportunities that heretofore could not be procured, and which are of inestimable value to him, and through him to his employer. It provides a correspondence school of instruction so that every clerk, whether a member of a chapter or not, can receive instruction, and it publishes a semi-monthly paper called 'The Bulletin of the American Institute of Bank Clerks,' which should be in the hands of every bank clerk in Virginia; indeed, many officers find much of interest and instruction in its columns."

Col. Robert J. Lowry, President of the Lowry National Bank of Atlanta, Ga., at the recent convention of the Georgia State Bankers' Association, said:

"Many of you are doubtless aware of the fact that the American Bankers' Association is maintaining an institute for the education of bank clerks. It is so managed that any bank clerk can get information that will be very valuable to him, and of course very valuable to every bank in the State of Georgia.

There is issued twice a month a paper known as the 'Bulletin,' which is full of suggestions and lessons upon banking from the elementary branches of banking on up through the higher and more complicated problems that arise from time to time in our profession. The subscription list of the 'Bulletin,' which embraces subscribers all over the country, is about 6,000.

It was my pleasure to attend a meeting of the New York Chapter of the American Institute of Bank Clerks a few months ago in the city of New York, which chapter is composed of about 400 men. I thought I would find bank clerks there of ages ranging from 15 to 30 years and upwards, but I found some of them there as old as I am, and that's getting along up the ladder pretty well. They seemed to be learning, and that chapter of the institute was doing a great deal of good. The bankers were there, too, and they took great interest in it, and one of the bankers told me that the best clerks he ever had he got through that institute. He had found that they were up to date. Said he: 'Take a young man that has been through this elementary education, that has been given to him either by mail or through these chapters, and he will step right into the place of one that it would take two years to train up before.'

Now, I am sorry to say that we have not a chapter in Georgia. I am very greatly interested in this work, and I would like very much to see chapters in the larger places—I say this because I presume the smaller places could not well afford it. Now, I earnestly hope that this association will do something to help this cause along. I have been pretty prominently connected with the movement for some time past, and I would like to have something to show from Georgia, and to show that I have done some work at home. I hope that commencing now the Georgia Bankers' Association will encourage their clerks to meet together, and talk about financial ideas and propositions, for I am sure it will help them, and help the banks of the State as well.

Now, if you will help me a little along the line of my proposition of getting up some chapters of the American Institute of Bank Clerks, I will appreciate your co-operation and support in this direction. I especially appeal to Augusta, Macon, Columbus, Savannah and Atlanta—yes, right here at home."

And these are but a few of the many expressions of interest from bankers.

Chapter libraries are being formed, embracing standard works, on financial and economic subjects, and are largely employed by the members in their work. That of the St. Louis chapter now includes some 200 books of from one to twelve volumes each.

Promotions indicative of the real worth of the institute work have rewarded many members. Of all the promotions of bank clerks in Chicago during the year, eighty-six per cent. were of chapter members, although only one-fifth of the bank clerks of Chicago are enrolled in that chapter. The president of the Buffalo chapter has been promoted to an Assistant Cashiership; president of Minneapolis chapter to like position, and San Francisco chapter has been similarly honored. St. Paul chapter was for a time without officers, every one having been promoted to Assistant Cashiers. And there have been many promotions of institute members outside of chapters.

The correspondence school of banking, in its important function, cannot be overestimated. It brings the advantages of the institute to the greatest possible number of bank clerks. Especially helpful to bank clerks deprived by geographical situation of the chance of chapter membership, it is also greatly appreciated among chapter members. But ten per cent. of the enrolled students are chapter members, which seems to indicate that this branch of the work is most appreciated by clerks of banks located in the smaller towns, *i. e.*, country banks.

Chapters as a whole are being interested in the work along the line of the theses plan. Papers on subjects assigned to the various chapters, after discussion and revision in the author chapters, are sent for discussion to other chapters and the final product published in the "Bulletin," whereby it is presented to the students who are not chapter members and to every other chapter. Similarly the best papers prepared by the individual student are presented through the "Bulletin" to the chapter students.

The studies of the correspondence school are divided into thirteen elective courses on the following subjects:

Practical Banking,	Double Entry Bookkeeping,	Financial History,
Bank Arithmetic,	Business Correspondence,	Penmanship,
Commercial Law,	Practical Finance,	Commercial Geography,
Commercial Rhetoric,	English Grammar,	Shorthand,
	Civil Government.	

There are at present enrolled in these various courses some 800 students. When it is considered that one of the largest and most aggressive correspondence schools in the country took years to reach 600 students, the success assured to the correspondence school of banking cannot be questioned.

In the studies in practical banking, commercial law, double-entry bookkeeping, bank arithmetic, shorthand, business correspondence, commercial rhetoric, English grammar and penmanship, the examinations are by questions and answers.

Each of these courses is divided into sections. When a student enrolls in any of these subjects his fitness for pursuing the course of study selected is first determined. He is required to furnish information concerning his education, training and experience, and also to specify the special object he has in view in taking up the desired study. If this examination reveals the need of work more elementary in character as a foundation, the student will be officially advised of the fact and such suggestions offered as may be warranted. When the course of study is approved, a textbook is sent to the student, together with letters of instruction, and examination questions relating to the first two sections. The letters of instruction are personal letters, adapted as closely as possible to the student's individual needs, telling him how to proceed with his study and what features to lay special stress upon. In accordance with these directions he begins the study of the first section of the course. When he has mastered the first section he lays it aside and answers the examination questions relating to its contents. The answered questions are mailed to the institute. There they are carefully examined and corrected and marked according to merit. They are then returned to the student, accompanied by a letter of suggestions and criticisms. If the answers of the student show that he has failed to get an intelligent understanding of the subject, that fact is brought to his attention, and he is directed to go over the ground again and to submit to the institute satisfactory evidence of improvement. When he has complied with these requirements, his papers on the first section are returned to him, and he receives the third section of the course with a letter of instruction and the examination questions covering the text.

Thus, the student has in his possession always a section of study waiting for his attention to which he can devote himself promptly, while his work on the section immediately preceding is passing through the mail to the institute and is there being examined. By this method he can carry on his studies as rapidly as the time at his disposal will permit. When he meets with difficulties that he cannot overcome by earnest, unaided effort, the institute will give him such help and guidance as may be advisable. He has only to write out and mail a clear statement of the facts he cannot understand, and the necessary information and instruction will be promptly supplied.

The studies in commercial geography, financial history, practical finances and civil government, the preparation of short papers or theses, take the place of examination by ques-

tions and answers. The nature of these subjects makes it almost impossible to test a student's knowledge of them by a series of categorical questions and answers. The training the student receives in putting his thoughts on paper, expressed in simple, clear language and arranged in logical sequence, is of greater value to him as an educational discipline than answering disconnected questions about undigested information. After the student has enrolled and has passed the preliminary test of his fitness for taking up the study selected, a textbook is sent him, together with letters of instruction and advice regarding the way he should carry on his work. These are personal letters, based on facts furnished by the student, and their purpose is to meet as fully as possible his individual needs. Each course is divided into sections. When a student begins his work letters of instruction covering the first two sections of the course are sent him, together with a list of subjects relating to the text of these sections. When he has mastered the first section he lays it aside and selects from the subjects on that section one upon which he writes a short paper. This he mails to the institute and then begins work on the second section. His paper is corrected and criticised, given a percentage mark and returned to him, along with a letter and subjects regarding the third section. This method is continued to the end of the course.

The tuition fee for each course is \$15. This fee includes one year's subscription to the "Bulletin" and also textbook and all instruction and examination papers, which become the property of the student.

Group courses have been arranged by combining the essential features of the elective courses on those subjects most closely related. Students are thus afforded comprehensive training for specific lines of work without the necessity of absorbing the separate course on each topic. The fees for the group courses are materially less than the cost of the same instruction in the separate courses. Special groupings to meet the peculiar needs of the individual student are also arranged at similarly reduced cost.

The "Bulletin" may be described as the warp of the institute fabric. It is so closely related to the other divisions of the institute work, in addition to its distinctive character, that anything said about the "Bulletin" reflects at once the whole institute.

Purely educational, it is of wide influence, already reaching some 6,000 subscribers. Every State and Territory in the Union and many foreign countries are represented on its mailing list.

Evidence of the esteem in which it is held is found in the many appreciative letters received from subscribers. It is the mental clearing-house of institute members, facilitating exchange of ideas. It is the exponent of the institute to the general banking public. It is esteemed by the bankers of the country as a valuable compendium of banking information.

As generally indicating the success of the institute as a whole, there appear in the following pages of this report typical letters received from subscribers and students, and a list of prominent men who have interested themselves in forwarding the movement.

At once illustrative of what the institute has accomplished, for an individual, student, subscriber and chapter member, and a comprehensive description of the institute as it appeals to the bank clerk, there is presented also the prize essay on the institute written by Mr. W. F. Mackay, of the Cleveland Trust Co., Cleveland, O. Twenty papers, each one worthy of note, were prepared for this competition, all examples of what the institute has done and an indication of the good it can do.

J. B. FINLEY, *President*.

THE PRESIDENT: The next business on the programme is the address by Mr. L. P. Hillyer, Cashier of the American National Bank, of Macon, Ga.

MONEY ORDERS OF BANKERS' ASSOCIATIONS.—ADDRESS OF L. P. HILLYER, CASHIER AMERICAN NATIONAL BANK, MACON, GA.

Mr. President, Gentlemen of the American Bankers' Association, Ladies and Gentlemen—A more appropriate name could not have been given those small evidences of debt issued by the post office and the express companies than "money orders." They are just what their name implies—orders for money. They have been used by the public for many years, and have always been honored when properly presented for payment. Not only the upper and middle class of the United States, but the ignorant negroes of the South, the half-educated foreign laborers of the Northern and Western States and the "heathen Chinese" of the Pacific Slope have been taught to believe in the solvency of these orders. They are perfectly familiar with their form, shape and color, and they know that the Government of these United States guarantees the payment of one, while the great and powerful express companies guarantee the payment of the other. They have the same faith in these orders as they have in the actual money of the Government.

Without going into details, but just to show the size to which the money order business of this country has grown, I will mention the fact that the post office now does a daily business of over \$1,200,000, averaging about \$7 per order. As to the express companies, reliable figures can be had from the brief issued by the American Express Company in its suit with the Government on the war revenue tax some years ago, and from which I quote the following: "In the year ending December 31, 1899, money orders were sold by all express companies to the number of 10,135,052, aggregating a total amount of \$120,040,277.65. The express money order averages \$11.84 per order and the average rate was ten cents per order." It has been estimated that a clean profit of three million dollars is annually made by the Government and the express companies in the selling of these orders, and the business is steadily growing.

EXPERIENCES IN SEVERAL STATES.

In view of these facts, it is but natural that there should have been a general agitation among the banks of America to recover this money-order business. In 1894 the Texas Bankers' Association adopted what was called the reciprocal draft, for the purpose of competing with the post office and express companies. This was a special form furnished to members by the association, limited in amount to \$200 and cashed without discount by any member. The association expended considerable money in supplying the forms and advertising matter. A number of banks expended an additional amount to advertise it. Efforts to popularize this instrument proved futile, the public seeming slow to recognize a draft as equal to a money order. The Georgia Bankers' Association, in 1896, two years afterwards, adopted what was called a circular check, which, likewise, ran its course. It has been thought by the friends of these enterprises that neither instrument was properly named. Both should have been called money orders. It would have taken two decades to have taught the masses what was meant by the terms reciprocal draft, and circular check. But the bankers of the Lone Star State, with that same determination and heroism displayed by their forefathers when they gained their independence under the gallant Sam Houston, would not give up the fight. With renewed enthusiasm, they have adopted what is now called the bank money order, which has been in use for several years. The Texas money order is drawn on New York, Chicago, St. Louis, Kansas City, New Orleans and other points and bears the insignia of the association in the form of a shield. In an address made by Mr. J. W. Butler, the secretary of the Texas Bankers' Association, he said: "The system of money orders, issued under the auspices of the Texas Bankers' Association, has proven quite a success. For many years, the subject of how to combat the inroads of the express companies and the post office engaged our conventions. We found the key to the problem when we decided by resolution that the members of our association would make no charge for cashing bank exchange when \$200 or under.

"Besides benefiting the members by this enterprise, we have enlightened our association. The money-order idea is largely to be credited for the increase of membership in the Texas Association from 239 at its introduction, to the present splendid number of 470, and the system is a potent factor in retaining this large membership. To summarize the advantages of the system: First, your exchange bears the statement: "bank money order." This enables you to advertise your exchange as "money order," which term is well understood by the public. Second, you offer an order that will be cashed without discount almost anywhere in this country. We have not had reported a single instance where a bank charged for cashing one of such orders."

The Missouri Bankers' Association, which boasts of the largest membership in proportion to the number of banks, has recently adopted a money-order system. So has that active and wide-awake Minnesota Association, and I am informed that Kansas and California have a bank money-order system of some kind. Washington, Nebraska, New York, Michigan, Louisiana, Tennessee and Virginia have already adopted, or contemplate adopting, a money-order system in the near future.

BANK MONEY ORDERS MUST BE MADE ABSOLUTELY SAFE.

Thus it will be seen that the idea is a popular one, and it will not be long before many other States will be giving these money orders a trial. I believe that to a large extent the State associations will succeed with these orders, but it is my fixed opinion that until a money-order system can be devised whereby

its orders will be asked—not almost everywhere, but everywhere—as readily as are the orders issued by the post office and express companies, the post office and express companies will not be very much annoyed by our competition. The business obtained by these very wide-awake and enterprising State associations will not grow to any great and magnificent extent until they adopt some plan which will make the money orders issued by the little banks of Ty Ty, Georgia, and Licksillet, Texas, just as good as the orders issued by those mastodon banks in the great reserve cities. Not only must they do this, but they must establish the fact in every State of the Union that an order issued by one bank is as good as an order issued by any other bank. The wise and progressive leaders of these State bankers' associations are endeavoring to have their money-order systems adopted by all the other States. When they succeed in this, a long step forward will have been made, but the system will still be incomplete. It is absolutely necessary for every money order issued to be as good as gold, and the question has been asked: "How can it be made so?" It is infinitely easier for the public to become posted as to the reliability of the post office and express companies than it is to learn about the standing of thousands of different banks from Maine to California. In answer to this, it is urged that no one ever saw a financial statement of the express company, and yet the public buys its orders by the thousands. This is not a good argument. It is an easy matter to gain the confidence of the public, and so long as honest methods prevail, this confidence can be retained; but let one act of dishonesty or insolvency be committed, and that confidence is lost forever. It sometimes happens that the payment of an express order is delayed for a time because some officer is short of ready cash, but we have yet to learn of the absolute repudiation of an express order because of the company's insolvency. Until we learn of this, the confidence in express money orders will continue to increase; but if an express company should ever fail, and its orders be flung upon the buyers as worthless paper, it will take fifty years to outlive the prejudice that will be formed against them. The most successful bank money-order system ever devised, or that can ever be devised, will ultimately fail if an occasional order is allowed to go to protest. It is not enough to win success—we must deserve it. It is not enough to secure the confidence of the people who buy our orders, but we must also secure the confidence of the banks in every State and Territory which may be called upon to cash them. We must make our orders safe. These money orders must have something behind them besides the bank which issues them. May the day never come when the orders issued by any of our members can be justly styled "wild-cat orders." There must be some solvent guarantee that no matter if the bank of issue fails irretrievably, its orders will be promptly paid. An absolutely successful bank money order will never be attained until this is done. These State associations will some day find this guarantee and all will be well, but that day will be greatly hastened if our American Bankers' Association, with its power and influence, would lend the State association its mighty aid. Now is the appointed time for us to act. We, who banded ourselves together for the purpose of promoting the interests of the banking fraternity, should help them in this titanic struggle.

"It is more worthy to leap in ourselves
Than tarry till they push us."

I will not weary you with the details of the various ways in which this help might be given, but I am sure that success awaits our efforts. We have but to start the machinery in motion with the right men in control and we will have a money order that will stand the test, not for an age, but for all time. It will become so strong in the minds of the people that they will hoard these orders in times of panic along with the cash they draw from the very banks which issue them. Let us help them, not carelessly, but cautiously and advisedly. The wisest financiers of this world are American bankers, and the wisest of American bankers are members of this association. It is an idle tongue that will declare these bankers unequal to the task proposed. Before we turn our faces to the East, let us instruct our executive council to assist the State associations in their heroic fight. Let the council choose the wisest, brightest and most active to perform this work, and you may be sure that the money-order system they approve will close forever the ranting mouths of moss-back critics. They will give us a money order that cannot be altered or raised—an order that will be uniform in shape, size and color, so that it will be easily recognized wherever seen—an order which in five years, with the tremendous advertising and backing which this association alone can give, will be as familiar to the Filipino as his Spanish coin—an order

which will rival in stability the notes issued by that Gibraltar of banks, "The Mother of Threadneedle Street"—an order that will be as readily cashed in St. Petersburg as Chicago, in Paris as New York, in Vienna as San Francisco—an order which will bring back to the banks of this country millions of profit which, in their blind indifference, they have been giving away. Let us trust this work to the clever men whom the executive council will appoint. These men will think twice before they act. They will make no unwise move.

"And, like the famous ape,
To try conclusions, in the basket creep
And break their own necks down!"

They will not venture on this financial sea in a weak and saucy little boat whose untimbered sides will spring a thousand leaks should "the ruffian Boreas once enrage the gentle Thetis," but they will make their way in a strong ribbed bark that will ride safely and majestically on every wave, and hurl defiance at every storm.

MR. PIERSON: Mr. President, I believe the decision of the convention was that the consideration of the resolution in regard to money orders should come immediately after the reading of this paper.

THE PRESIDENT: The gentleman is correct.

The question is on the adoption of the resolution offered by Mr. Pierson as follows:

"Resolved, That this association adopt a banking money-order system, and that the president appoint a committee of five to devise a plan whereby members can be furnished uniform bank money orders and proper advertising matter in connection with the same at a minimum cost.

"The report of this committee shall be rendered to the executive council, which is hereby empowered and requested to authorize such expenditure as shall in their judgment be proper to enable the committee to carry out its recommendations."

EDWIN GOODALL, Vice-President Bank of Discount, New York city: Mr. President, I am glad that the opportunity has come that this question may be decided in the manner in which it will be. I only regret that there are no more people here to discuss it. The only modification or change I would suggest in the resolution, is that instead of the president appointing the committee, the executive council should be given that power. I offer this amendment, making that change; I offer it in a very friendly spirit, and if there is any objection, I will withdraw it.

A DELEGATE: Whom do you represent?

MR. GOODALL: The Bank of Discount, New York city.

THE DELEGATE: Are you connected with any institution using these orders?

MR. GOODALL: Yes, I am a director of the Bank of Discount.

(Cries of "Question," "Question.")

MR. PIERSON: Mr. President, the original motion was passed upon by the executive council, and recommended by them. The point made was that it seemed to be necessary that that change should come before the executive council. I call for a vote upon that.

THE PRESIDENT: I think it would be a very strict construction of the constitution to say that a resolution reported by the executive council could not be amended by the association, and, therefore, it certainly seems competent to propose the amendment that the gentleman has proposed. The question recurs on the adoption of the substitute for the original resolution.

MR. COOK, of Kansas City: Mr. President, it seems to me proper at this time to suggest that in view of the late hour, and in view of all the facts,

and since there seems to be some question about the possible fairness of the president, that the substitute should be voted down, and the original resolution prevail.

Upon motion, duly seconded, the amendment offered by Mr. Goodall was laid upon the table.

THE PRESIDENT: The question recurs on the adoption of the original resolution.

The motion prevailed.

Thereupon, at 1:30 o'clock P. M., the convention adjourned until Thursday, October 22, 1903, at 10 o'clock A. M.

SECOND DAY'S PROCEEDINGS.

Thursday, October 22, 1903.

The convention reassembled at the California Theatre, Thursday, October 22, at ten o'clock A. M., and was called to order by President Caldwell Hardy.

Prayer was offered by Rev. George C. Adams, Pastor of the First Congregational Church, San Francisco.

THE PRESIDENT: I have a telegram here, which I will read.

Cleveland, Ohio, October 19, 1903.

Caldwell Hardy, President American Bankers' Association, San Francisco:

Please express to the members of the American Bankers' Association my deep regret at my inability to attend the twenty-ninth annual convention. The members of the association may feel as I do a justifiable pride in the strong position which the association has taken in the country for conservatism and progression. I sincerely hope the convention may be the most successful in the history of the association.

MYRON T. HERRICK.

THE PRESIDENT: The secretary has two announcements to make.

THE SECRETARY: The California Society of the Sons of the American Revolution has sent the following invitation:

San Francisco, October 21, 1903.

Secretary American Bankers' Association, California Theatre:

Dear Sir—Enclosed please find circular relative to the annual dinner of this society, to be given here to-morrow evening.

It is altogether likely some members of your association now visiting this coast are members of our society.

If so, we extend to them, through you, a cordial invitation to attend this dinner as our guests, and if they will communicate with me, arrangements will be made to accommodate and welcome them. Yours respectfully,

A. D. CUTLER, Chairman Dinner Committee.

The California Promotion Committee of San Francisco writes as follows:

San Francisco, October 19, 1903.

Mr. Caldwell Hardy, President American Bankers' Association, Palace Hotel, San Francisco:

My Dear Sir—The California Promotion Committee, representing the leading commercial organizations of the city and State, tenders a most cordial invitation to the members of the American Bankers' Association to visit the headquarters of this committee at No. 25 New Montgomery street, this city.

As the objects of the committee are entirely unselfish, and as it is composed of the leading men of San Francisco, all of whom are glad to welcome the American Bankers' Association, I will most heartily appreciate the bankers calling at our headquarters and obtaining our literature upon all portions of the State. The Promotion Committee is a unique organization, supported entirely by subscription. Such interest has been manifested in the work that organizations of other committees representing a great amount of capital have come to study our methods.

I feel certain that, apart from the literature and information your members

can obtain regarding this great State at our headquarters. they will be glad to understand the workings of the organization which is so conspicuous a result of California patriotism.

The Promotion Committee, therefore, begs that the courtesies of its headquarters may be thrown open to the members of the American Bankers' Association, and that the spirit of this letter may be formally declared to all guests now in the city.

Hoping to have the pleasure of meeting you personally, I beg to remain, cordially yours,
RUFUS P. JENNINGS, Executive Officer.

This is a telegram received from the Cincinnati Chapter of the American Institute of Bank Clerks:

Cincinnati, Ohio, October 20, 1903.

American Bankers' Association, in Convention, San Francisco, Cal.:

The Cincinnati Chapter of the American Institute of Bank Clerks sends greetings.
WM. BEISER, Secretary.

The auditing committee have sent in the following report:

We, the undersigned auditing committee, have carefully examined vouchers and statements of George F. Orde, treasurer, and have found same to be correct.

ALEX. D. CAMBELL, Chairman;

G. M. REYNOLDS,

J. R. McALLISTER,

Committee.

THE PRESIDENT: What is your pleasure with the report—shall it be received and filed?

Upon motion, duly seconded, the report was received and filed.

THE PRESIDENT: Next on the programme is an address by Mr. J. E. McAshan, Cashier South Texas National Bank, Houston, Texas.

THE MONEY SUPPLY OF THE UNITED STATES.—ADDRESS BY J. E. McASHAN,
CASHIER SOUTH TEXAS NATIONAL BANK, HOUSTON TEX.

Coming as I do from the busy life of a banker in whose never-ceasing grind I have spent a third of a century, it can scarcely be expected that my remarks will be as academic as those of other men who have made the study of theoretical finance a specialty. There are, however, some things to be said of the money supply that will be recognized as truth by a majority of bankers in this magnificent commonwealth, whether they be from the city or from the country.

Volney, in his great work on the ruins of empires, classes the banker with the tyrant, and other oppressors of mankind. At a recent banquet in New York given to bankers, one of the orators, under the influence of enthusiasm, patriotism, remorse and other stimulants, said: "It is a good thing for us bankers occasionally to get together for the purpose of seeing what we can do, whom we can do, and how we can do them." I see before me representatives of this honorable profession of tyrants and doers, from all parts of this great country. I see before me those who angle for trout and suckers in New York, and those who, with equal impartiality, skin the festive cat and larger fish on the shores of the great lakes. I see my fellow doers from the prohibition woods of Maine, Kansas and Carrie Nation, to the boundless hospitality of wide-open San Francisco.

We, who represent the tyrannical profession of bankers, are gathered here from the land of icicles and bicycles, from the home of aromatic wooden nutmegs, from the land of the magnolia and the home of the mocking-bird. In fact, from everywhere I see before me members of that noble profession who do others for fear that others will do them, and I am confronted with the question, "The Money Supply of the United States."

What are we going to do about it? What can we do about it? Secretary Branch, in his letter to me suggesting this discussion, invited me to limit my remarks to two thousand words, so if I leave anything unsaid on this question, just lay it on my time limit. The request of the Secretary reminded me of one of my friends. The friend had a little boy who asked a great many questions.

One day his father said, "Dick, you take up too much of my time asking questions." "Well," said Dick, "just answer me one question and I will let you off. It will only take you a minute." "All right, if it will only take a minute, fire away." "Well," said Dick, "just tell me how to work miracles and how to make condensed milk." Dick's question remained unanswered. I am inclined to think that I would show you a miracle if I should make a thorough discussion of the money supply of the United States in two thousand words.

What do we mean by the money supply of the United States? We do not mean the supply of money that has accumulated in the vaults of the Government. This needs no discussion. We all know that the Treasury of the United States is overflowing with money. It has even been suggested that the reason the banks are so short on cash is because the Treasury is so long on it as to have about one-fourth of our circulating medium under its control. It is even hinted that Wall Street, with its matchless ability and vulpine cunning—this last phrase is not original—disapproves of the independent Treasury system. It is even spoken in whispers that our great captains of finance spend days, and even nights, in brain work trying to evolve some plan by means of which they can do the Secretary, establish a community of interest, as it were, between Wall Street and the Treasury and exchange some Treasury fatness for Wall Street leanness. The courting is all done by the financiers.

Why does this condition exist? The democrat will tell you that it is by an abuse of the taxing power of the Government; that a larger proportion of the people's money is withdrawn from circulation than is needed for the expenses of the Government. They are all democrats down our way, except Federal office-holders and other wards of the nation. The republican party will say that such is not the case. That this preponderating preponderance of wealth is due to a laudable effort on the part of our paternal Government to protect our little infant industries such as the United States Steel Corporation. Meantime, the banker is up against it. He who would give the glad hand must show the marble heart. His few days are full of misery.

The banker is a hybrid in politics; he is neither a democrat nor a republican. He is composed mostly of legs and baldness. Legs, the more conveniently to straddle political fences, and baldness brought on by herculean mental efforts to know on which side of the fence to fall at the right time. It is a tremendous job for a banker to think; when he does, something is sure to drop. Two of my friends were running for office. They met in our bank one day. One said the other was no democrat. The other said the other was another. The air became blue; the temperature began to rise; the electric fans fairly churned hot air. I saw that I had to speak or lose both their accounts. Unless I did, each would think I had said all the complimentary things which each had said of the other. So at the first pause in hostilities, I said: "Gentlemen, don't you think that in the discussion of such gigantic questions we are liable to run the economic center of immensities into the political conflix of eternities?" They both said they did, and at the same time with a paralytic smile bade me good-bye, and went away my friends. I had fallen on the right side of the fence, but just consider the waste of gray matter involved in such an effort! No, my fellow tyrants, we are not expected to discuss the money supply of Uncle Sam. That will be all right so long as he has unlimited powers of taxation and requires United States bonds as security for United States deposits.

The money supply under discussion is that of the country at large; the money which is available for business; the money which is available for paying deposits when our depositors withdraw a part of our working capital to work on themselves. It is a mystery to me what becomes of the money at certain seasons of the year. There are times every year when the whole country has an abundance, or seems to have. Interest rates seem searching for zero; loans are paid off and from New York to San Francisco and from Maine to Texas all the banks seem loaded with swag. There are other seasons when there is a great scarcity of it. Where does it go? New York does not have it; Chicago does not have it. I think from all appearances here it emigrates to San Francisco. The country does not have it. It exists, but is so nimble that we cannot find it. The fact that the whole country, under normal conditions, has at certain seasons of the year an abundance of money, in spite of all financial piracy and buccaneering, is proof that under ordinary conditions the money supply of the United States is sufficient for our commerce. The comparative volume of money in circulation, compared to the volume of trade, is greater in the United States than in any other country of the world. I make

this as an assertion. I am not going into statistics. Figures never lie, but statistics are sometimes misleading. A railroad company sometimes borrows money for years to pay its dividends, still expert accountants can figure out that their stock is a gilt-edged security.

Under normal conditions our money supply is ample; even now circulation is being retired more rapidly than the law permits. In February and March, with large deposits, we sometimes carry a reserve of eighty per cent. and blazon to the world our great riches. The solvency of a bank is gauged by the magnitude of its debts; the insolvency of other corporations is gauged by the same standard. We see this reserve melt in the balmy days of May to sixty per cent.; and in beautiful poetic June to fifty per cent.; in business-like July to forty per cent., and in the dog days of August to a poor, pitiful twenty-five per cent., down to a disgraceful level of New York, and we wonder how the mighty have fallen so low.

We then write our central correspondents to find if they have any money; that while we do not expect to use our credit, oh! no! as a matter of form we write to them, and they write back that they have none, but in case our scruples are removed against using our credit, that we are such valued customers that they will impair their reserve for our sake. Now, the question is, how can we avoid charging prohibitive rates of interest, when our deposits are melting like the beautiful snow? How can we avoid that mental strain that is required to make a banker look cheerful when the whole beautiful realm of nature seems hung with crape and in mourning; when the waves of the sea seem to chant dirges; when the winds in the woods seem to whisper requiems; when the thunders on the mountains seem to growl funeral marches, the prairie breezes howl lamentations, and even in sea, and wood, and prairies, and mountains, make our vacations a travesty and a farce?

How can we relieve our central reserve correspondents from the embarrassment of impairing their reserves out of mere politeness to us? How can we do these things and not violate the fundamental principles of American liberty and sound economics? I believe that the creation of money is an attribute of sovereignty, and should not be delegated to private persons. I believe that assets currency is an injustice to depositors. Nothing should ever be done to impair the security of the depositor. I believe that the right to issue unsecured currency by individuals is monopolistic and un-American. It would be the bestowal of unjust and unequal privileges and would be wrong. These are the fundamental doctrines of my financial creed. I am, however, not a dreamer, an idealist or an enthusiast. Emergency conditions require emergency remedies. I recognize conditions as they exist and would like to see a remedy devised, for it would result to the interest of agriculture, manufacturing, commerce, mining and transportation, which constitute the entire circle of human enterprise. There are times of the year when the volume of money is not sufficient, and no one knows this better than the farmer, the country merchant and the country banker.

When the earth has yielded her increase, when the harvest moon hangs high in the heavens, when the sound of the thresher is heard in the rice fields, when the darkies sing amid the sugar cane, when the great Northwest pours its grain in golden floods all over the land, when old King Cotton holds his imperial court in the snowy fields of the fleecy staple; when the withered banners of the corn are still, and gathered fields are growing strangely wan; while death, poetic death, with hands that color whatever they touch, waves in the autumn wood his tapestries of gold and brown; when everywhere in this mighty nation from the ice-fields of Alaska to the shimmering glory of the Mexican gulf, from the unfriendly woods of distant Maine, where the God of Day sheds his beams of gold at dawn to the radiance of the Queen of Night, who at the self-same hour sheds her silver light over the Philippine Archipelago, then it is that the banker realizes that our currency needs relief in order that the American banker, the American farmer, the American merchant and the American manufacturer may handle to the best advantage the fruits which have been so bountifully provided under the providence of God. How can this be done and not violate sound economics?

SUGGESTIONS FOR AN EMERGENCY CIRCULATION.

I would like to make a suggestion, not as a cure-all, but simply as a suggestion subject to fewer objections than any I have seen brought forward. The relief should be on the emergency plan, pure and simple, and permissible only in emergencies and for the public good. It should be in the interest of the people, and not classes, and

should be taxed out of circulation the moment the emergency is past. It should be safe and elastic. It should be uniform. It should be of such a character as not to weaken public confidence in banks. In short, it should be a currency based upon sound economics and patriotism. An unsecured bank circulation would be as safe as are the deposits of the bank, for the resources of the banks are guarantees of their payment, and whoever would deposit money in a bank would accept the bank's note. This, of course, would only operate locally.

It seems to me that a perfectly satisfactory emergency circulation could be devised along the following lines: Authorize the Secretary of the Treasury to issue Treasury notes to the National banks to the extent of twenty-five per cent. of their paid-in capital, on the following terms and conditions: The loan of these notes to the banks to be a general liability of the banks, secured by the several and proportional obligation of the stockholders of the banks to whom the notes are loaned. This pledge of the stockholders to be in the form of a stockholder's vote and to be in the nature of a continuing guarantee. This obligation to be in addition to the present general stockholder's liability of one hundred per cent. This loan of Treasury notes should not be made indiscriminately, but only to such banks as have stockholders whose responsibility is unquestioned, and has been ascertained by the Treasury agents, the bank examiners.

Thus, when a bank showed among its liabilities any emergency circulation, instead of creating any uneasiness in the public mind, it would promote confidence, and be a badge of honor or merit, as showing that the stockholders of the bank had been ascertained by Treasury agents to be good responsible men. The irresponsible bankers would thereby be eliminated. Such notes should be redeemable at the Treasury or any sub-Treasury. A duty should be charged upon such circulation, so low during the harvest season that banks would be encouraged to take them out, and thereby facilitate the commerce of the country, and this duty should be so high during the time that the emergency does not exist as to force the retirement of the notes and thereby prevent inflation. This duty should be at the rate of about three per cent. from July to January and at the rate of about ten per cent. from January to July.

The proceeds of this duty should be held as a safety fund out of which to pay the expenses of the issue and redemption, and for the purpose of redeeming those notes loaned to any failed banks. As most banks are well and wisely managed, this safety fund would no doubt be ample for all purposes, and it is not likely that a call would ever have to be made upon the bank stockholders to reimburse the Treasury for the loan of these notes. The banks should be required to hold a reserve against these notes, and the notes should be redeemable in any lawful money of the United States, and their redemption and retirement once a year should be made compulsory in case the ten per cent. duty was not a sufficient inducement for all banks to do so.

Along these lines, in my opinion, an emergency circulation could be devised that would be elastic. It would respond to the needs of trade. It would be safe, for it would be guaranteed by the liquid wealth of the banks and the accumulated capital of the stockholders. It would not impair public confidence in the bank's solvency, for its issue would be an evidence of merit, of the responsibility of stockholders. It would not only provide money for crop movements, but it would provide an enormous resource that could be utilized in times of panic, and thereby be a positive benefit to every class of citizens. The depositors of a bank are from every walk of life and in time of panic need to be saved from their own thoughtless ignorance and folly.

It may be thought that this suggestion is class legislation, and if it is subject to this taint, the taint is so small as hardly to count. Its benefits would be so far-reaching, wide-spreading and various, that the entire commonwealth would receive them and the special privilege so hedged around by safeguards, personal liability and taxes, that it would not be abused. This personal liability and tax feature may make my suggestion unpopular in some quarters. There is a great disposition on the part of most men to share benefits and avoid responsibilities. There is an old and honored American sentiment which says that they who dance should pay for the music. If this addition were made to our currency system it would be as nearly complete as we can hope to make it.

The time allowed for my address has now expired. I put forward my suggestion modestly, tentatively and hesitatingly, not as a universal panacea, but as an improvement. The area of this country is as great as all Europe. Our facilities for

commerce and exchange, our oceans, our vast inland seas, our navigable streams, our canals, our vast network of railroads comprising thousands of miles, give us avenues of trade which no other nations ever enjoyed and which tend to the production of wealth with a rapidity not to be measured by any standard of the past. These things produce a traffic requiring at certain seasons of the year a volume of currency unprecedented in the marts of trade.

Let us hope that the glory and fame of the United States may not be tarnished by unwise financial policies. May this nation, whose victorious arms on land and sea have astonished the world, whose triumphs in mechanical arts and sciences have won the applause of nations, whose far-reaching commerce has invaded and subdued by gentle yet compelling force, Europe, the Orient and the isles of the sea, making it the arbiter of the world's destiny, while not aiming at the world's empire; may this nation, which in civil liberty and education uplifts and upbuilds the human race, and shall be the luminary for all the ages yet to be poured into the lap of empires from the secret cavern of time; may this nation, which seems to have been reserved by the God of nations for the manifest destiny of dominating and redeeming the globe, which has evinced a spirit of patriotism, and whose battle hymns have rekindled the altar fires of the earth; let this nation formulate odium of caste or lax with the taint of unsoundness, but such a theory as may be in keeping with the sublimity of our history, and the magnificence of our destiny.

THE PRESIDENT: The Chair regrets that Mr. Homer S. King has been called out of the city, and will, therefore, be unable to address us.

I now have the pleasure of introducing Mr. William B. Ridgely, Comptroller of the Currency, who will address us on the currency question.

MR. RIDGELY: Mr. President, Ladies and Gentlemen—I have taken the liberty, too late to have it changed on the programme, to alter the title of my address. Instead of speaking on "The Currency," the title of my paper will be "The Business Situation and the Currency."

THE BUSINESS SITUATION AND THE CURRENCY.—ADDRESS BY HON. WILLIAM B. RIDGELY, COMPTROLLER OF THE CURRENCY.

During the years of very active and prosperous business which we have had since the country began to recover from the depression following the panic of 1893, there has been a very marked improvement in the fundamental condition of our people and the amount of both capital and wealth they have produced and saved. This is especially true among the farming and producing classes, who have not paid off a vast amount of debt, but have accumulated money and property of all kinds to a greater extent than ever before. There has been a great increase in the volume of money in circulation among the people and there is more money in the banks to their credit. Since 1896 there has been a greater increase in the amount of money in circulation than during any other like period and about eighty per cent. of this increase has been in gold. We are continuing to add about eighty millions a year to our gold in circulation and about one-half of all the currency is gold. Our prosperity in business has been based on the very best foundation. It has been the result of the most legitimate causes and forces, and all these are not only still in operation, but give every evidence of continuance.

As is always the case, however, in such times, this movement of activity has been accompanied by a large amount of speculation, not only in stocks, bonds and securities, but in many other lines, and credits have become more and more expanded. In stock speculation and promotion especially we have gone too fast, with the inevitable result of a serious collapse, and such a decline in prices that people are becoming alarmed and beginning to ask if this may not end the whole movement of prosperity. This causes doubt and increasing hesitation in business circles. There is also a demand for financial and currency legislation, or Governmental aid in meeting the situation as it exists at the present time. While these important questions are all more or less connected and interwoven, the business situation is not to any very great extent due to currency or financial causes, and it is not to legislation we should look for permanent relief. If we had a better, and especially a more elastic, currency system, we might have been spared from some disturbances. If the surplus revenues of the Government had not been taken out of general circulation, there might not be so much fear of a tight money market. But, on the other

hand, if there had not been the most absolute confidence in the soundness of our currency, the disturbances in the markets for securities of the past two years would probably have spread very much farther, and doubtless ended in a serious crisis with severe industrial and commercial depression. If there had not been a large surplus revenue and plenty of money in the United States Treasury, the Secretary might not have been able to render the assistance he has to the money market on several occasions when he checked trouble due to causes entirely apart from all questions of currency or governmental finance.

It is true that there are some changes in our Government financial system and paper currency which are needed and which might be made to very great advantage. If they were in force, these changes might now be very useful, but this situation is not due to the lack of them. We should make such a change in the collection and disbursement of the national revenues as will prevent the withdrawal of vast sums of money from business just when most needed. There is nothing so sacred about Government funds that they should not be handled through the banks like other people's funds so they would produce the least possible derangement of business. If any of the great corporations should handle its funds as the Treasury of the United States does and lock up such a vast sum of cash in its own vaults, legislation would immediately be demanded to stop it. We should at once pass such legislation as is needed to have the Treasury stop it and let money and business alone as much as possible. The less the Government has to do with business and business with the Government, the better for both.

CURRENCY LEGISLATION DESIRABLE, BUT INAPPLICABLE TO THE PRESENT SITUATION.

I am a thorough believer in currency reform and agree with those who wish to see the greenbacks retired, the silver withdrawn down to a point where it would be practically a subsidiary coinage or currency, leaving nothing in circulation but gold, as coin or certificates, and a real bank-note circulation secured by gold reserves with such regulations for issue and redemption that it would be a matter of indifference to the banks whether their credits remained with them as depositors or were circulating as notes. This is the only true solution of our currency matters, and I hope to see it some day accomplished. This, however, is a thing which can only be gradually done, and has little or no practical bearing on the present business situation. We have another very different system in force and it is with it we have to meet and cope with our present problems. It has two very great advantages. Our people are used to it and have had no experience with any other. Only the veterans in business remember anything different. Its greatest advantage is, however, its absolute safety and soundness. Realize what this has meant in the last year or two and especially in the last few months. If there has been the slightest doubt or uncertainty in regard to any of our currency, our standard of value, or our national finances, the squalls we have thus far stood so well would have developed into a cyclone that would have swept the whole country, leaving ruin and disaster on every side. It is a very good system which resists such strains, and there is great force in the argument that this is not the time for any very radical change if we should now attempt any at all. What is needed now is business sense and good judgment, not legislation. We may need currency legislation as we have needed it for years, but it is not to meet this situation, and there is no use to delude ourselves with the hope that legislation will help us out of trouble due to over-expansion and speculation. We need all the reserve money we can get, but legislation will not produce it. We must wait for the accumulation of gold, the only real reserve money. It will be no real help to make a further large increase in bank-note circulation and no one would think of adding to the volume of the greenbacks. No legislation can change fixed capital to productive capital. That is merely a question of time, and there is nothing to do but to wait for it.

FAR-REACHING EFFECTS OF FINANCIAL DEPRESSION.

There is also a tendency towards recrimination and placing the blame for present business conditions on some one else; for one section of the country to blame another; for the West to say it is all the fault of the East and Wall Street. Some very foolish people say they are glad to see the speculators lose because they alone are to blame and the rest of the people will not be hurt. There can hardly be any more mistaken view than this. There is no man, woman or child in the civilized world so poor, so remote, or obscure as not to be more or less affected by the large

movements in the financial centers. Very recently I have known personally of enterprises in the mountains of North Carolina, in California, in Hawaii, in Alaska and in the Philippines whose proposed operations have been curtailed on account of the uncertainty of the money market. The result is that the amount of money to be spent for wages and supplies among people so widely separated in different parts of the world has been reduced and these people who, if they have ever heard of such matters, regard themselves as far beyond their reach and influence, have been directly affected in the amount of their wages and incomes and the prices of their products. These are only examples of thousands of similar cases and no one can say he is not concerned. The ramifications of business in all parts of the world are so intricate and far-reaching that what affects the money market in any large way reaches us all. It is true that there has been over-speculation, much of it wild and foolish; some of it fraudulent and dishonest. It does no good, however, to scold and blame the speculator. He always follows and participates in such a movement and always will until human nature changes. The purely gambling speculation on margins is only the fringe of the great trading and dealing in stocks and securities in Wall Street, which is a necessary part of modern business.

Do not misunderstand me as defending or even excusing this speculation. There is entirely too much of it and too many business and professional men, bankers and bank officers, have been tempted and acquired the habit of speculation during the last few years of rapidly advancing prices. It should be stopped if there is any way to do it, and you, as bankers, can do as much to discourage, if not prevent, it as any one can.

This sort of speculation, however, is not by any means a chief or leading factor in the situation. The whole movement since the revival in business came has been more or less speculative, and just as business has been unduly depressed and prices lower than they should have been, we have gone to the other extreme. Wall Street and the speculators are perhaps not so very much more to blame than the rest of the country. Where is the man or the bank entirely free from sin to cast the first stone? You may not speculate on the stock exchange, or underwrite promotions, but it will be hard to find the bank whose officers or chief customers are not in some local promotion or combination which is more or less speculative. Properly enough, too, in many cases perhaps, for it is often one of the best services a bank can render its own community to encourage local enterprises which are legitimate and which are to be in honest and competent hands. The strongest claim which is made for our system of locally owned, independent banks is that they develop local institutions and are able to lend their credit to worthy local enterprises and deserving men where personal knowledge of the moral risk justifies credit which would not otherwise be granted. The interests of the whole country are so bound up together that no one section can truthfully say we have plenty of money and can take care of ourselves no matter what happens in Wall Street. The manifestations, of course, come in the financial centers, where there are daily quotations of prices and rates of interest and weekly statements of bank conditions, but people in all parts of the country are doing business and lending or borrowing money in the financial centers, especially in New York. Every day there are transactions and negotiations there affecting widely scattered parts of the country, and no one can tell how soon or to what extent these may influence his own business, the returns on his investments, his savings accounts, or his insurance policy, the market for the products of his farm, his mine, or his factory, the sale of goods from his store or his wages and the cost of living for his family. No one is so isolated or self-contained as to be entirely free from the effects of any important financial change or disturbance.

This is no time for any feeling or discussion between different sections of the country, classes of people, or lines of trade as to who is most to blame or who can stand it best. We are all face to face with the situation and equally interested. It is no time for passion or excitement, panic or fear, but for quiet, calm consideration, courage and firm action based on good judgment and conservatism. Considering all the circumstances and the pace at which business has been going for the past few years, it is not so surprising that there has been such a decline in the prices of securities, but rather that the country has stood it all so well, and that there has been no panic, so little trouble with the banks and so few failures. There could be no clearer demonstration of the inherent strength of our conditions and of the absolute confidence in our currency and Government finances.

Beginning with the stock panic in May, 1901, there have been repeated and

tremendous slumps in the prices of stock and securities, collapses and failures in railroad and industrial syndicates, combinations and underwriting, and one of which, had our situation been less strong, would have produced a bad panic and a disastrous commercial depression. That we have stood it all so well is the best possible ground for the belief that it need go no further and that there is no reason for its reaching into general business and producing any great depression. As Secretary Shaw has so well said:

"There exists to-day no one fact, and no combination of facts, the logical sequence of which suggests disaster. If disaster comes it will be psychological and not logical. The microbe, if it exists, is in the mind; it is not elsewhere."

FALLING OFF OF THE BANK RESERVES.

It has been evident to any careful observer for more than a year past that our bank loans have been expanding too fast. The total loaning capacity of the banks of the country, as a whole, is limited by the amount of cash available as reserves for the deposits created by the loans. The credits loaned by the banks stay in the banks as deposits. The money may be transferred from bank to bank, but, as a whole, the money stays in some bank and the deposit continues as a deposit. In the report of the Comptroller of the Currency for 1902, there is a table given, showing the amount of coin and all forms of currency in circulation and the proportions held in the United States Treasury, in the banks, and now in either the Treasury or the banks; in other words, in circulation among the people. Except in unusual years like 1893 and 1896, these proportions do not vary much. The Treasury holds twelve per cent. to thirteen per cent.; the banks thirty-two per cent. to thirty-three per cent., the people fifty-three per cent. to fifty-five per cent. of the cash, and these proportions have hardly varied at all, while the total money in circulation has increased from eighteen hundred million to twenty-seven hundred million dollars. The great bulk of the loans remain as deposits in some bank and the chief limit to loans is the reserve for these deposits, and the total loaning power of the banks, therefore, depends upon the amount of deposits for which they can supply reserves.

In the article I read before your convention in New Orleans a year ago, I gave the figures showing the decline in the percentage of reserves in all the National banks at the following dates:

	Per cent.
December, 1896.....	32.42
October, 1897.....	31.70
September, 1898.....	30.27
September, 1899.....	29.38
September, 1900.....	29.67
September, 1901.....	27.65
September, 1902.....	25.74

At the date of the last call, September 9, 1903, the National banks showed 26.60 per cent.

Exactly similar figures for all the banks, State and private and National, are not so accurately compiled, but about the same proportionate decrease in percentage of reserves has taken place in all the banks of the country. In this same period, while the percentage of reserves to deposits was continuously on the decline, the amount of cash held by the banks increased from \$974,000,000 in 1896 to \$1,411,000,000 in 1902. In about the same time the total loans of banks increased from about four billion to over seven and one-half billion dollars. This available loaning power was a very potent factor in the great business revival which we have seen in the last few years. Its existence could not have produced the revival without the aid of favorable industrial and commercial conditions, but without this available expansion of loans and credits the revival would not have taken place.

There has, however, been another and perhaps more important change in this loaning power than increasing loans and the lessening percentage of reserves and that is the way in which it is now employed. The loaning power still exists; in fact, it is in operation, as the loans are now outstanding. In 1897, when the expansion began, we had passed through a period of most drastic and thorough liquidation. Everyone had been living and working economically and paying their debts. Not only the total amount of loans, but the portion of loans absorbed for fixed capital was at a minimum. The loaning capacity was, therefore, available for employment

In any way which promised safety and profit, and perhaps we were for a while more intent on the profit than the safety. Now, however, we have had a period of extravagant living and working and prices of all kinds are high. It takes more money or credit, which is what is used in business, to do the same volume of business. What is more serious, a vast amount of this loaning capacity has gone into fixed improvements, which are either unproductive or very slowly becoming productive.

There is one field in which the loaning power has been absorbed, which is not so fully appreciated because there are no figures to show its amount, and the facts are not so widely known; and that is in the purchase of farming lands. It has been very largely a movement from some of the older Western States, where the prices of farming lands have become comparatively high, into the States further West or into Canada, where a man can buy two or three, or even five or ten, acres of the cheaper lands for the selling price of one acre of his old farm. This movement has not only taken accumulated savings out of the older communities, but large sums have been loaned to make these purchases of lands. This is a very important factor to-day in many of the middle Western States. It is not an unusual thing to hear from a local banker or from a bank examiner that fifty to a hundred thousand dollars has thus been taken from a small town, and the total amount of this must run up into many millions of dollars. Much of the loaning power of the Western banks has been thus absorbed which was formerly used in the purchase of brokers' commercial paper and loans on collateral in Chicago and New York. Another large proportion of the loaning power is absorbed in carrying increased quantities of old and new securities, some of them of more or less doubtful value. This is the situation which has called a halt and set us all to thinking, not the lack of a comparatively few millions of currency to move the crops or the accumulation of the surplus in the Treasury. Of course, those are factors of great importance, but they are not the leading or controlling factors in this situation.

STRONG FEATURES OF THE PRESENT SITUATION.

The power to loan still exists; the money is still in the banks for reserves, and there is as much money as ever in circulation outside of the banks and the Treasury. The question now is not so much the power as the disposition or willingness to loan. How far will the country go in the tendency to contract these loans? That is a question for the bankers mainly to decide. For about a year there has been a steady, almost uninterrupted, decline in the prices of all stocks and bonds. It has, however, been so comparatively gradual that there have been no bank failures, and very few stock exchange failures as the result, and so far general business has not been seriously checked. From a strictly banker's standpoint, his situation has been in one respect much improved. However hard it has been on those who have made the losses, the bank loans on stock exchange collateral are now readjusted upon a much lower basis with at least as much margin and probably more than on the higher range of values. A break in prices which, if a banker knew it was coming, would be very terrifying, is now past and the banks have not been hurt by it. The explanation of this is that most of the people who have made the losses had the money to lose without losing the money of the banks. Many of them made it on the rise in prices and only have given up part of the profits. There probably never was a time before in the history of the country when such a decline in stock prices could have happened and found the people so well prepared for it and the whole country with such powers of resistance and recuperation. We are in an entirely different condition and this is what gives such foundation for hope and firm faith in the future. The way business has stood the decline in stocks is an evidence of strength, not weakness. There may be and doubtless will be some hesitation and curtailing of other lines of business as the result, but there is no occasion to be nervous or hysterical about it; we should keep cool, and where our calm judgment approves be bold and courageous. If we have been too hopeful, do not let us all at once become too pessimistic. Let each bank stand by its customers and stand by the country, as it deserves. It never was in better condition when facing any such situation.

Contrast the position of the railroads to-day compared with a few years ago, when more than one-fourth the mileage and many of the most important lines were in receivers' hands. You have no more of railroad receiverships. The roads are on an entirely different basis. The country has filled up so that they have a vastly increased volume of permanent traffic; their tracks, machinery and organization are so improved that they can handle their business far better than ever before.

There is no comparison which can be made of the condition of the country to-day with what it was only a few years ago, which does not show the surest foundation for enduring prosperity, and there is no part or section of the country of which this is not true.

During the last ten years the balance of trade in favor of the United States has amounted to over three and three-quarter billions of dollars. For the single year 1901 this was \$679,000,000. Although the alarmists complain of a considerable falling off for the year 1902, it was still almost one-half a billion dollars, or about twice as much as it had ever been in any year of our history previous to 1898. The aggregate wealth of the country has increased fully fifty per cent. since 1890. We are producing and adding to our stock of gold every year about \$80,000,000, and almost an equal quantity of silver. The annual value of our farm products steadily increases and for the year 1903 it will be at least five billion dollars. The deposits of all banks in the United States have increased since 1895 from \$4,900,000,000 to \$9,525,000,000, almost double. The deposits of all banks in the State of Texas for this same period have increased from \$35,000,000 to over \$80,000,000, about 228 per cent. In the State of Iowa, the increase has been from \$78,000,000 to \$211,000,000, over 270 per cent.; in Kansas it has been from \$35,000,000 to \$84,000,000, or over 250 per cent.; in Nebraska from \$35,000,000 to \$84,000,000, or 228 per cent.; in California from \$200,000,000 to \$406,000,000, or 203 per cent. In Oklahoma and Indian Territory, where, in 1895, the total deposits were considerably under \$2,000,000, there are over \$27,000,000 on deposit in the banks. The aggregate deposits in all the banks in the States west of the Mississippi River have increased from \$701,000,000 in 1895 to \$1,700,000,000 in 1903, or 242 per cent. The three States of Minnesota, Iowa and Missouri have more bank deposits now than all the States west of the Mississippi had in 1890, and the States of Washington, Oregon and California have \$40,000,000 more bank deposits than all the other States west of the Mississippi had in the year 1890.

But it is almost unnecessary to quote figures and statistics to you who are the custodians of the funds and thoroughly familiar with all the business of your home communities. No one knows better than you bankers what a great increase there has been in the wealth and prosperity of your own people at home; how many of them are out of debt and have money in your banks who ten years ago seemed hopelessly buried under a burden of debt they could never pay. You of the South know that the change in Southern conditions is a revolution, and that with good crops of corn and cotton your people are better off to-day than they have ever been before. You of the farming States, the West, the mountains and the Pacific slope, have seen whole States which were apparently bankrupt, where farms would not sell for the mortgage on them, raise year after year record-breaking bumper crops, and many of these mortgages paid off with the proceeds of one or two years' harvest. You have seen farms produce in one year crops of greater value than the land would have sold for before the crop was planted. You have seen your people pay off their mortgages and your bank deposits double and treble within the last few years.

You of the reserve cities, who are at the centers of business and commercial life, have seen equal prosperity among your merchants and manufacturers. You know how your country bank customers have prospered and how their balances have increased with you; how many of them used to have to borrow of you are competing with you and lending money to your own city customers. Every State in the Union, every section of the country, has shared in all this. It is no sudden effervescence or bubble of speculation, but the natural, inevitable result of potent existing and continuing forces. It is not going to disappear or vanish in a day because of a slump in stocks or the collapse of a few underwriting syndicates. It may be necessary to pause a little to get our breath after the pace we have gone, but if there is any serious check it will only be because we have lost our nerve and courage. The course of business to-day very largely depends upon the bankers. If the banks continue to act wisely and conservatively, as they have, they can avert anything like serious trouble and keep the country in shape for a continuance of very prosperous times. In doing this, they can perform a most patriotic service to the country, and, as is usually the case, the patriotic thing to do is the wise and sensible business course as well. The banks have only to stand by and look out for the best interests of their customers and stockholders. If each bank takes care of its own business and own people and stands by them now there need be and will be nothing more serious than a period of waiting and perhaps some readjustment of

prices which might in the end be a good thing for every one. The speculations, promotions and combinations which have run their wild course were caused by and were not the cause of prosperity. Prosperity came as the result of the productivity of our fields and forests, our mines and factories, the tremendous energy and activity of our people applied to the most wonderfully productive country in the world. It should not and will not cease because the speculative attempt to discount the future and over-capitalize earning power has met with fore-ordained and inevitable failure.

THE PRESIDENT: The next business in order is the call of States.

THORNTON COOKE, Treasurer Fidelity Trust Company, Kansas City, Mo.: I desire to offer the following resolutions for reference to the executive council, with the request that it be reported immediately back to the convention for its consideration. It is this:

Resolved, That the committee on fidelity insurance be continued until the next annual meeting of this association.

The motion was seconded.

THE PRESIDENT: It is moved and seconded that the fidelity committee be continued until the next convention. That motion would require a two-thirds vote to be adopted, according to the constitutional provision.

A vote was taken, and the resolution was unanimously adopted.

THE PRESIDENT: The resolution is referred to the executive council.

P. C. KAUFFMAN, Second Vice-President Fidelity Trust Company, Tacoma, Washington: Mr. President, I offer the following resolution:

Resolved, That the thanks of this convention be tendered to the Comptroller of the Currency, the Hon. William B. Ridgely, for his wise, temperate and most timely address.

The resolution was unanimously adopted.

C. B. MILLS, Cashier People's Trust and Savings Bank, Clinton, Iowa: I offer the following:

Resolved, That the executive council be requested to grant the request of the educational committee to appropriate the sum of \$10,000 to carry on the work of the American Institute of Bank Clerks.

The resolution was seconded by William George, of Aurora, Illinois.

THE PRESIDENT: That will have to be referred to the council by a two-thirds vote, for an immediate report, as was done with the former resolution.

The resolution was unanimously adopted.

THE CALL OF STATES.

THE PRESIDENT: We will now proceed with the Call of the States.

The secretary proceeded with the call of the States, and the following responses were made:

ALABAMA.

L. B. Farley, Cashier Merchants and Planters'-Farley National Bank, Montgomery, Ala.: Mr. President and Gentlemen—First on the roll of States to answer to the call, so will Alabama be found on the tablet of progress and prosperity. Like a brilliant meteor in a scintillating galaxy of States, Alabama stretches from the beautiful valley of the Tennessee on the north to the historic Gulf of Mexico on the south, and within her bosom she carries those God-given treasures which would be a credit to any State or country now known to man.

In inexhaustible quantities from the very bowels of the earth we are producing for the use of mankind the very best grades of iron and coal, and at a lower cost than is possible in our sister State of Pennsylvania and older competitors. The labor question in Alabama is one that scarcely, if ever, perplexes its citizenship, for the reason that wages well balance the hours of toil and the cost of living is not a severe tax upon the people.

With us business is good, and the song of contentment is heard far and near.

The future of the State is safe beyond question, in that its industries are diversified, for, besides the natural products to which I have referred, Alabama is one of the largest producers of King Cotton, and at present prices this year a distribution of nearly \$60,000,000 will result from the recent labors of our farming interests on this account alone. Our corn crop exceeds in volume that of any previous year for two decades past, while in oats we have made a yield equal to our coming needs.

Money is plentiful in Alabama, and our banks are rapidly becoming lenders to our Eastern friends, rather than borrowers. During the year ending July 1, the deposits of Alabama banks have increased \$10,000,000, while banking capital has shown an increase of over \$3,000,000; the increase in the number of banks being less than twenty.

Our most important move of financial interest has been the passage by our Legislature, on October 3, of a banking bill, requiring periodical examinations of all State and private banks by a State Examiner, and the publication of additional statements as called by the State Banking Department. The bill also restricts unsecured excessive loans, and loans to officers or employees, as well as requires the maintenance of a fixed reserve. The bill has been sadly needed for years, and "wildcat" banking is now at an end in Alabama.

Rich in its natural and agricultural attainments, Alabama has not been behind in presenting you with such army and navy timber as "Fighting Joe" Wheeler and Richmond Pearson Hobson, and to elevate the negro (whose condition is as well cared for in Alabama, as in any State in our indestructible Union), we have made you acquainted with Booker Washington, who is doing a great work along the right lines at Tuskegee.

In conclusion, I wish to impress upon my hearers that true American manhood in all its beautiful and sweet characteristics is found flourishing in Alabama in no less degree than elsewhere, and no son of our State can have a grander heritage than to be brought up to manhood under the gentle influence of an Alabama mother, for of such is created the true American citizen, who knows no North, no South, no East, no West.

Alaska. (No response.)

ARIZONA.

L. M. Jacobs, Cashier Arizona National Bank, Tucson, Arizona: Mr. President, Arizona simply has to say that her people are progressing to a very great extent, as evidenced by reports her banks are able to make, and I have to say that there is only one change we would like to make, and that is we would like to get out of our territorial condition that now exists and join the galaxy of States that form this great and glorious Union.

E. F. SWINNEY: Mr. President, I would ask that the executive council meet at once at the rear of the stage.

ARKANSAS.

John G. Fletcher, President German National Bank, Little Rock, Arkansas: Mr. President, and Members of the American Bankers' Association—As a representative from the State of Arkansas I bring good tidings to this convention. I hail from a State that has more navigable rivers than any other State of this Union, that has more fertile alluvial land than any other State of the Union. When I look back into the past history of my State I am reminded of a sentiment that is expressed in the good Book, that the first shall be last, and the last shall be first.

Arkansas is to-day no longer the laughing stock of the people of this country. We have over two hundred banks in the State, every village in the State has one or more banks, and they are all doing reasonably well. The State is now virtually inundated by the timbermen and lumbermen of the great North. We have the finest forest timber that grows upon the face of the earth; we have the finest cotton-producing State in the American Union, and that says everything. We have coal that underlies thousands of acres of our ground, which is now receiving the attention of capitalists and being developed. Why, sir, let me say to you that Arkansas is to-day one of the main pillars of the American Union.

Last year Arkansas had a million bales of cotton, worth \$50,000,000, and our wheat crop and our corn crop were all good, and we also raised a great quantity of fruit, including plenty of watermelons for the negroes to eat.

As a native of Arkansas, I say that I am proud of the State, as I am proud of the United States—a Government whose two per cent. bonds are quoted in Wall Street at 107, while British Consols at two and three per cent. are down to 88.

We are American citizens, we in Arkansas, white, black, red and all together. We live together there with our colored people in perfect harmony, working side by side for the upbuilding and prosperity of that great State.

I am reminded of what the immortal Thomas H. Benton said in the Senate of the United States, that this country must look to us, look to the East, look to Arkansas for a home.

I had relatives that came across the plains in 1849, who helped to make California what she is, and we are proud of her. She is the only State in the American Union that never had a territorial form of government. Why? With the great moving spirit that prevailed in 1849 so many came in here that California was admitted as a State.

But to return to Arkansas. When the Creator had finished the universe and saw that it was good, not only good, but very good, he had an eye on Arkansas. Draw a line from Maine to San Francisco, and Arkansas is the half-way house. Draw a line from the Great Lakes down to the Gulf of Mexico, and Arkansas is the half-way house. So it is that this American Union is the center of the world, and Arkansas is the center of the Union.

My time is up, gentlemen. I am proud and happy to be with you. I have had an awful weight on my shoulders since I have been here, being the only representative from the great State of Arkansas, and having carried the whole State on my shoulders, no wonder I feel a little fatigued.

I thank you for your attention, and I hope to see every man here at the next national convention. I hope you will return home and find your families in good health and your business in a prosperous condition.

A VOICE: "What's the matter with Arkansas?"

CALIFORNIA.

J. M. Elliott, President First National Bank, Los Angeles, California: Mr. President, the member from California who was to have responded is not here. All that I have to say in his place is that when speaking of this great State it is impossible in the few minutes allowed me to recount what there is here for you to see. What I say to you is, gentlemen, look about you from the time you cross the Sierras until you go back again. I am sure that what you have seen, and what you will see, will be interesting, and much of it strange. It may be that much of the country will seem desolate to you; but remember that you have come to us at a time when we have had no rain for six months, which, in your country, would mean absolute desolation and destruction. With us we have been accustomed to it for so many years that we have learned to withstand it, and to prosper notwithstanding it.

Welcome has been given to you by San Francisco men whom you have listened to, and all I can say to you in addition is, may you all enjoy yourselves from the time you come within our gates until you leave them.

Colorado. (No response.)

CONNECTICUT.

A. J. Sloper, President New Britain National Bank, New Britain, Conn.: Mr. President and Members of the American Bankers' Association—The State of Connecticut, the land of steady habits, sends greeting to this convention, and have decided, the two or three of us that are here, after visiting this beautiful city, that the city of San Francisco, and especially the bankers who are visiting here, are attempting, in the evening, at least, to emulate the land of steady habits; because we found them where, if they are to become a close second to our good old Connecticut, we should have to send back for reinforcements.

Connecticut is doing very well. We have \$25,000,000 only of banking capital, with about \$18,000,000 surplus, and some \$65,000,000 of deposits. But in our manufacturing interests—what shall I say? Who shall come after Arkansas? Let me remind you, gentlemen, that when you go home after you have been out here with the boys at the club, or elsewhere, you will take from your pocket a key, and after you have found the keyhole you will put that key in a lock that was probably made in Connecticut, because we make about eighty per cent. of the builders' hardware that is used in the United States. You will hang up your

hats on a hook on the hat-rack that was probably made in Connecticut. You will walk over a carpet that is tacked down with tacks that were, no doubt, made in Connecticut. Your house was probably made with tools that were made in Connecticut, because we make sixty-five per cent. of all carpenters' tools in the country. Then you may go into the pantry and spread yourself a cracker, and if you do you will use cutlery that was made in Connecticut—because about sixty per cent. of all the cutlery in the country is made in our State. Then you will go into your rooms and lie down to rest on a brass bed that was made in Connecticut, because about seventy-five per cent. of the brass beds are made in our State. You will sleep on a mattress that was probably made in our State, because sixty-five per cent. of the wire fabric mattresses are made there. When you throw off your suspenders, preparatory to going to bed, you should remember that they were probably made in our State, for we make about ninety per cent. of the metal on the suspenders that are worn. Then, if you pare your corns before retiring, you will use a knife that was made in Connecticut.

And so it is from the cradle to the grave, you daily must use the products of our State. At last, when you are laid to rest, you will be laid in the earth in a coffin which, in part, at least, came from Connecticut, and screwed in with screws that were made in Connecticut, because about seventy per cent. of the screws are made in our State.

We are not so large as Arkansas; we are on one side of the United States instead of being in the center; we are not the center of the universe. But Connecticut is enterprising and progressive, and we will always be with you, especially in a gathering of this kind. As a result of our industry, business ability and thrift we have in our Savings banks a little over \$225,000,000. With a population of about a million, that means \$225 to the credit of every man, woman and child in our State.

E. F. SWINNEY, Chairman Executive Council: Mr. President, the executive council recommends the adoption of Mr. Cook's resolution.

As to the resolution to set aside \$10,000 for the educational committee, that needs a little explanation. Last year they set aside \$7,000. They have only used \$4,000 of this amount, and the council would recommend that \$5,000 be set aside for that part, or that it be referred to the incoming council.

ROBERT J. LOWRY, President Lowry National Bank, Atlanta, Georgia: I think the gentleman is a little in error. We had \$3,000 left over last year, and we had an appropriation of \$10,000. There was about \$3,000 left over. Therefore, we ask for \$7,000.

MR. SWINNEY: As I understand it, this \$3,000 remains to the credit of that committee, and the \$5,000 will be added to that.

MR. LOWRY: I hardly think that the committee can get along with less than the amount they ask for for this great work. Of course, we are not going to spend it unless we can spend it to do good for the American Bankers' Association. Therefore, we hope that the appropriation asked for will be given.

THE PRESIDENT: As there seems to be some difference of opinion as to the amount appropriated, Mr. Swinney has suggested that it be referred to the executive council, and my idea is that they will make ample provision for the committee.

MR. LOWRY: I hope that that will not prevail. I hope that we will not be in a hurry about this, but that we will take time to understand it, and let the appropriation be made, and then, if the committee requires more, I know the executive council will give us more.

THE PRESIDENT: The motion before the house is to refer it to the incoming council.

MR. LOWRY: As I understand it, they report \$5,000 with the \$3,000 which was unexpended, making \$8,000 in all. Is that right?

MR. SWINNEY: We have something of this kind come up at every council and hurry it through. We do not believe it is a good idea to have them go

through in this shape. We believe they should have due consideration, and for that reason we believe the matter should go before the new council. There is no question but what the new council will get along all right with this committee and give them what they need, but you know you cannot get a council together and pass upon a matter of this kind without considering it somewhat.

J. B. FINLEY, President Fifth National Bank, Pittsburg: Mr. President, I wish to say that this is a recommendation, as I understand it, to the council to make this appropriation. It is more for the purpose of getting the sense of the convention. They cannot make an appropriation on the floor. The appropriation will be made by the council. Of course, it leaves it in the judgment of the council to act as they think best, and this is simply a recommendation, and it only received the approval of the convention.

THE PRESIDENT: The language of the resolution is, "Be it resolved that the executive council be directed," etc. That is an order to the council.

The question before the convention is on the reference of the matter to the incoming council, on the recommendation of the present executive council.

The question was taken, and the resolution was adopted.

THE PRESIDENT: The council have recommended the adoption of Mr. Cooke's resolution, in regard to the fidelity committee, continuing that committee.

The resolution was unanimously adopted.

THE PRESIDENT: The Secretary will resume the call of the States.

Delaware. (No response.)

DISTRICT OF COLUMBIA.

Milton E. Alles, Vice-President Riggs National Bank, Washington: Mr. President, and Gentlemen of the Convention—This call of States has not proceeded very far before it is clearly demonstrated that the place which commands the use of the highest superlatives is our own home. I have the honor to represent a place which, next to your homes, should command your pride, and which, I am sure, does. The city of Washington is now, by common consent, the most beautiful capital of the greatest country in the world. (Applause.) Its affairs are stable, owing to its peculiar system of government, and we are without any of the problems which face other municipalities and which are so apparent in this beautiful city of San Francisco to-day, if we may judge from the signs we see upon the streets. We have no strikes in Washington, and we have the best paymaster in the world, Uncle Sam, who never defaults on pay days.

My message to you is one of greeting from the bankers of the District of Columbia, who command me to say that all is quiet on the Potomac, and, we hope, in the region about the headwaters of the Chesapeake, also of the Alleghany and the Monongahela.

FLORIDA.

John C. L'Engle, President State Bank of Florida, Jacksonville, Florida: Mr. President, speaking for Florida, it would, in view of the warm-hearted, generous and genuine hospitality which has been extended by California, be in bad taste to refer to those productions of Florida which come in competition with those of California. I will, however, say only that Florida's orange groves are recovering from the disastrous freeze of February, 1895, and that her orange crop this year will be about one million boxes. Florida's material and industrial development, however, has been during the past year greatest in the production of naval stores. This industry has quadrupled within that time, the forests of Florida affording new fields for the capital and labor which have heretofore operated in North and South Carolina and Georgia, until now Florida furnishes, I am reliably informed, one-half of the spirits of turpentine and rosin produced in the United States. The output marketed from Florida this year will amount to about \$10,000,000, while the aggregation of the business into fewer hands, whose interests have been mutual, has resulted in controlling the market price

so as to enable the producers to get some adequate return for their investment of capital, and labor to be better rewarded.

And while we have had these gratifying developments in the naval stores industry, our production and shipments of phosphate have steadily increased, until now Florida phosphate is a factor that has to be reckoned with in fixing the price of the world's supply of this fertilizer.

GEORGIA.

Col. Robert J. Lowry, President Lowry National Bank, Atlanta, Georgia:

Georgia's Resources.—From the Empire State of the South, rich in its resources, unexcelled in climate, where the hum of industry is heard, from the rugged foot of the Blue Ridge to the level pine forests of our southern boundary, from this great Commonwealth we bring greeting and good tidings of peace and prosperity.

Agriculture.—Georgia is a State of diversified industry, but in agriculture is it particularly prominent. The staples are corn and cotton, though our varied climate and soil make it possible to grow almost anything that is raised in any of the other States. In the southwestern part of the State we raise wheat, oats, hay and potatoes. Our fruits and vegetables, melons, sugar-cane, tobacco, etc., are all valuable products, yielding us a handsome return each year. The syrup made from our South Georgia ribbon-cane equals that of the best refineries of New Orleans. In the matter of raising cotton our product has increased about one-third in the last ten years. The present crop is estimated at about 1,250,000 bales. Last year the cotton crop of our State brought about \$60,000,000, being 1,500,000 bales. The cotton seed about \$8,000,000, besides the by-products, amounting to about \$12,000,000.

We are manufacturing the staple right where the raw material is produced, and where, in 1880, the sound of the shuttle and the hum of the spinning-wheel were heard, we now have large cotton factories with the latest improved machinery. Georgia used something over 350,000 bales of the last crop in the manufacture of cotton fabrics in her factories. The total sum now invested in textile factories in our State largely exceeds \$35,000,000.

In 1880 there were only two cotton-oil mills in the South. There are now about 125 in Georgia alone, with an annual output worth over \$12,000,000. We have several hundred miles of coast. Along the coast we raise oranges, lemons, and other tropical fruits. The tourist is greeted by the scent of sweet magnolias and cape jessamine as he travels through the southeastern section of our State. Orange blossoms, too, may seem to be an impossibility in Georgia, but believe me when I say that we feel the kinship with Southern California in respect to this industry of growing tropical fruits.

Minerals.—The Piedmont region of our State abounds in minerals of all kinds, including gold, copper, lead, iron, coal, pyrites, manganese, ochre, asbestos, marble, granite, etc. Stone Mountain is a solid block of granite 1,686 feet above the surface. We have large granite, marble and slate quarries in North Georgia, and these interests are very prosperous. With our navigable rivers, and 8,000 miles of railroad, we have ample facilities for handling the product of our mines and manufactories.

Naval Stores, Lumber, etc.—The manufacture of naval stores, such as tar, turpentine, rosin, etc., is an industry in South Georgia which is yielding a large revenue each year. Nearly half of our State is covered with forests; the timber lands are being rapidly cut out and merchantable stock shipped all over the country, as well as to foreign ports. The product of superior hardwoods and long, yellow-leaf pine is increasing every year.

Manufactures.—Georgia is now among the foremost of the Southern States in her manufacturing interests. We have factories for the manufacture of cotton and woolen goods, sawmills, foundry and machine shops, tar and turpentine stills, carriage and wagon factories, brick, tile and terra-cotta works, tanneries, paper bag factories; besides flour mills, copper and ironware works, fertilizer plants, stove and furniture works, and, in fact, such a diversified list of manufactures as to make Georgia well nigh independent. We are rich in resources, and we have only to convert them into the manufactured articles of commerce, when the steadily increasing demand for our goods makes an ample market at profitable prices. Oriental countries are fast becoming customers for the Southern output, and when our proposed Nicaraguan Canal gets on a competitive basis with Europe, the exports of the Southern States will exceed those of any other section.

Schools.—The constitution of the State provides for the maintenance of a public school system, and it is therefore a permanent institution. The sum provided for and expended in the support of schools for the last fiscal year was about \$1,500,000. A late census by the State School Commissioner showed that of the total school population only three per cent. had never attended school. We now rank seventh among the States in point of illiteracy, and in 1890 we ranked third, showing a most marvelous progress. There is not a district anywhere within the confines of our State where a school is not in reach for at least five months in the year. It must be remembered that the Civil War left us with a large population of illiterate people, the freedmen being almost entirely so. It must also be remembered that notwithstanding nine-tenths of the taxes are paid by the white people, the negroes are entitled to the benefits of the same common school system as the white children. While we have not compulsory education in our State (and I do not favor such enactment) there is, nevertheless, a growing sentiment in favor of education, which, to a certain extent, subjects a man who does not educate his children, to criticism. Our progress in matters of education has been rapid, and I am glad to say we continue to progress in this most important and indispensable feature of modern civilization.

Climate.—Our climate is unexcelled. In Middle and North Georgia the mean temperature in summer is seventy-five to eighty degrees. In North Georgia some of the finest specimens of men are to be found. Hardy, sturdy mountaineers and strong, able-bodied, industrious farmers comprise the yeomanry of our State. Georgia is a pleasant place to live in at any season of the year. We have essentially a temperate climate, have no long wet and dry seasons, and no direful epidemics decimating the ranks of our population. We live in a temperate zone, with a temperate climate, and with a people of temperate habits.

Morals.—We are a law-abiding and hospitable people. The morals of the State are good. Aside from some isolated examples of moral depravity, we have an industrious population, who earn their bread in legitimate ways, and augment their means only through the medium of honest toil. Our people endeavor to practice what we preach in our coat-of-arms—Wisdom, Justice and Moderation. We are, above all, a justice-loving people, and we believe, too, in wisdom and moderation governing in politics and religion, and in the handling of public affairs and issues.

Banks.—We have in Georgia forty-six National banks and 223 State and private banks. According to the State Treasurer's record the assets of the State banks are something over \$50,000,000. These have an aggregate capital and surplus of about \$12,000,000, and deposits aggregating about \$38,000,000. Our National banks have an aggregate capital of about \$5,000,000, and deposits of about \$18,000,000. There have been only two or three bank failures in the past ten years. Notwithstanding we have many prosperous banking institutions, the circulation per capita is much smaller than we would like, and there is ample room for the safe investment of capital. Money is in active demand. I know of no section of the United States which offers a more inviting and profitable field for the safe investment of funds than does Georgia.

Idaho. (No response.)

ILLINOIS.

William George, President Old Second National Bank, Aurora, Ill.: Mr. President, Bankers, and Bankers' Guests—By reason of the absence of Hon. Andrew Russel, of Jacksonville, Illinois, and because through the good graces of the members of the Illinois Bankers' Association—the largest association of its kind in the United States—I happen to be its president, I am called upon to respond for Illinois.

First, we are proud of our Illinois Association, which, through the efforts of such men as John L. Hamilton, Andrew Russel, August Blum, E. J. Parker, F. P. Judson, F. W. Tracy, D. A. Moulton, and others, has to-day on its membership roll 900 banks out of 1,100. Soon we will annex the American Bankers' Association.

Californians, Illinois is glad to be here; she rejoices in your prosperity as well as her own.

A four-year-old boy said in my city recently: "Cats grow crossways, dogs grow crossways, too; all God's creatures grow crossways, 'cept peoples, and peoples grow upways." So Illinois and California are always growing upways.

Like the other States heard from, Illinois is prosperous; labor is employed

at good wages. The wage-earner of Illinois is not dancing this summer of prosperity away, but is putting his money in the banks, where he can have it in days of adversity. It is no longer fashionable to hide it under the carpet or put it up the eaves-trough. Our farmers and stock-raisers are growing wealthy, and farm mortgage lenders have no place to put their money. Our manufacturing and mining interests are developed to a wonderful degree.

Since 1896 the deposits in the banks outside Chicago have increased ninety per cent. In the same time but two National banks outside Chicago have borrowed in New York, and one of these did it only to see if it could get the money. That gain of ninety per cent. represents wealth gained. How different from the wealth gained by corporate manipulation.

Last spring we were troubled somewhat by water from the heavens; lately we have feared the water from Wall Street; but we have good dams constructed, and it won't hurt us. If not sufficiently protected, we can dam Wall Street some more.

In 1896 we caricatured the long-whiskered Populist of Kansas because he wanted the Government to construct warehouses to hold his grain, on which he wanted the Government to issue warehouse receipts to be the basis of money. To-day he has all the money he needs, and the Populist is found in New York, and wants to build warehouses to store his undigested securities, against which to issue some kind of money.

Illinois has had its share of oratory on the question of elastic currency. I am reminded of the Lawyer O'Conner, who, in my presence, in the City Court of Aurora, said: "Gentlemen of the jury, the law is very intricate; why, the learned judge on the bench knows full well that the more he studies it the more stupid he becomes." But is it not our duty as bankers to read, study and consider, and finally decide the matter honestly and patriotically?

In closing, I quote the beautiful words that I found recently in an old manuscript, as befitting this occasion, and expressing the views of Illinois toward the Californians: "Happy have we met, happy have we been; happy may we part, and happy meet again."

INDIANA.

Andrew Smith, Assistant Cashier American National Bank, Indianapolis: Mr. President, and Gentlemen of the Association—The Indiana Bankers' Association sends greeting to this convention. Our association in the State of Indiana is in a most prosperous condition. With about 600 banks in the State we have a membership in our association of 417 in good standing. The people, as well as the banks in our State, were never more prosperous than at present.

Indian Territory. (No response.)

IOWA.

Fred Heinz, President Farmers and Mechanics' Savings Bank, Davenport, Iowa: Mr. President, Ladies and Gentlemen—The banking conditions in Iowa continue to be favorable. Since last year about twenty-five additional banks have been organized, so that at this time over 1,200 are in existence, of which over 700 belong to the Iowa Bankers' Association.

The deposits have increased some, although not so rapidly as heretofore.

The National banks, on September 7, 1903, had \$28.80 of each \$100 in deposit of cash on hand, redemption fund and due from reserve agents. So far as known, all the banks have sufficient funds on hand for all legal requirements; the interest rate is firm. The year past has been favorable for agricultural products and for business generally, although in spots crops have suffered from excessive rain; but the prices being reasonably high, this year's output of good things to eat for man and beast will be many times the value of all the annual gold and silver output in the United States. As the average soil of Iowa is good and deep, and the Lord's sprinkling-cans are, and have been for many years, in successful operation during reasonable intervals, we live in hope that the toll of our people and of our descendants will be abundantly rewarded for many generations.

KANSAS.

Edward Carroll, Cashier Leavenworth National Bank, Leavenworth, Kansas: Mr. President, I regret that I have been unable to prepare a speech, but the truth is I have been so busily engaged in enjoying the hospitality of San Francisco that I have been unable to do so.

I will say this, however, for Kansas. More history has been made in Kansas, probably, than in any other State in the last fifty years. Fifty years ago, when Horace Greeley crossed the continent and went through Kansas, he designated it as a part of the Great American Desert. That showed that poor, honest old Horace knew more about philosophy than he did about farming. That part of the Great American Desert, as he called it, the western half of the State, produced this year from thirty-five to fifty bushels of wheat to the acre—land that eight years ago you could have purchased from a dollar to three dollars an acre. That beats handling stock in Wall Street. Thirty years ago the western half of our State was the battleground for Indians; it was turned over to the howling of the coyote and the bellowing of buffaloes. To-day it is the garden spot of the world for wheat-raising.

Kansas, it is said sometimes, has peculiar people. In some respects that is true. They are all original investigators. They are intelligent; they are highly so. In fact, the State spends more for primary education, I believe, than any other State of its population in America. Indeed, it is said that she has a little red schoolhouse on every quarter section of her beautiful prairies.

Now, I know I have very little time to discuss the matter, it is such a great subject; it would require a book bigger than Webster's Unabridged to do it justice, and I would have to be endowed with the descriptive powers of Sienkewicz, or Marion Crawford, to do it justice. But, in reference to business prosperity, I will say I have never known, in the many years that I have resided there, a greater prosperity within the borders of Kansas than exists at present. Her banks are prosperous. We have 650 banks in the State, and 530 of those banks belong to the American Bankers' Association. That is good evidence of the good sense of the Kansas banker. We have \$105,000,000 on deposit, or a fraction over \$70 per capita. That is \$70 for every man, woman and child in the State, a magnificent showing for a purely agricultural State.

A few years ago Kansas, it is said, was mortgaged for many times the value of her farms. I am glad to say that that condition no longer exists. She is practically out of debt, her farmers are out of debt, and the State itself is in the best financial condition of any State I know of west of the Mississippi River. By a wise provision of her constitution the bonded indebtedness of the State can never exceed a million dollars. That amount she has to-day in her sinking fund and her treasury vaults, to take it up when it matures.

Much is said of gold and silver. My friend from Arkansas has referred to the fact that that State has a million bales of cotton worth fifty million dollars. Kansas has 95,000,000 bushels of wheat, and we expect to realize \$75,000,000 for it. I have not the statistics as to the corn crop, but I believe it is estimated at 80,000,000 bushels.

There is just one other idea. The granger of Kansas is not bothered with trusts, or labor strikes. He is utterly indifferent to organized operation on the one side that menaces this country—

THE PRESIDENT: The time of the gentleman has expired.

Mr. Carroll: A gentleman on the cars asked me if Kansas had any drawbacks. I suppose you gentlemen may have the same question in your minds, and I will answer you as I did the man on the cars. She has no drawbacks, at any rate none that a loyal Kansan will plead guilty to.

KENTUCKY.

Henry C. Walbeck, Cashier German Insurance Bank, Louisville, Kentucky: Mr. President, in the absence of Colonel Powers I have to say that our State is prospering in its manufacturing and mining industries; that its asphalt beds are inexhaustible; that the crops of wheat and oats and blue-grass are below the average, on account of drought. Our corn, hemp and white barley are all above the average.

LOUISIANA.

H. H. Youree, Vice-President Commercial National Bank, Shreveport, Louisiana: Mr. President, I do not know that there is much left to say. Originally, Arkansas, as well as many other States, belonged to Louisiana; they were part of our State. We are prosperous in Louisiana. In New Orleans, negro labor has received eight dollars per day for six hours' work. Even then they struck for more. That looks as though we ought to be pretty prosperous. Eight dollars for six hours' work is pretty good.

Louisiana raises more rice than any other State, and also more sugar. It also produces more sulphur than any other State in the Union. There is a general condition of prosperity all over the State. Our Iowa brothers have come down there and taken up rice-producing, and they find they can produce it about as cheap as they can produce wheat, and they get four cents a pound for it. So you see we have got a State, even after they have taken away Arkansas and all the other States, which amounts to a good deal.

THE SECRETARY: For several years we have had several members of our association in the Hawaiian Islands; but at this convention, for the first time, we have the pleasure of having one of those members present. Mr. Waity, of Hawaii, will respond to Hawaii.

HAWAII.

H. E. Waity, of the Banking House of Bishop & Co., Honolulu, Hawaiian Islands: Gentlemen of the Bankers' Association—I was not familiar with the method of this calling of States, and I have no speech prepared. I did not know that we would be called upon, but I thank you for this opportunity to be heard.

We have here two other bankers from Hawaii, in addition to myself, and it has not been my good luck to consult with them, but in hearing the alphabetical call, and in realizing that heretofore there has been nobody to respond for the letter "H," I felt that it was proper, now that we have a Territory of Hawaii in the Union, that the "H" should be added to the list.

I overheard the remark a few moments ago that, judging from the very favorable reports from the States and Territories so far heard from in the Bankers' association, it might be inferred that bankers are not as conservative as they are generally supposed to be.

I do not wish to attempt, gentlemen of the convention, to tell you of the grandeur of Hawaii. I only want to say to you now that we extend to you a most cordial invitation to come over to the islands and see us for yourselves, investigate and learn what Hawaii is—your new Territory over which, we are proud to say, the Stars and Stripes now wave. We say to you to come and see us, and learn for yourselves what we are and what we are doing.

Of course, we have to admit that sugar is king, and we can say that we produce a great deal of sugar. Our exports of sugar are growing at the rate of about fifty thousand tons a year. This present crop will probably reach 400,000 to 420,000 tons of sugar. The next crop will be still larger than that, because it is growing. But, as I said, I will not attempt to tell you, in this brief speech, how great we are, or what our resources are. I only wish to extend to you a cordial invitation to come to see us. Connecticut, on the one side, has given us a report of what she is doing. We are a long way from Connecticut; we are away on the other side. Our Island of Hawaii is the largest one of the group, and it is just about the size of the State of Connecticut. It makes about two-thirds of our area. I will not attempt to give you statistics or figures in regard to the islands, off-hand. We hope to be a State some time. We aspire to great things down there, and if you will pay us a visit and give us a call, we will all welcome you; and I can say that I am sure you will be interested in what you see, very much interested, and that we will give you the most cordial welcome whenever you come.

MARYLAND.

James R. Edmunds, Cashier National Bank of Commerce, Baltimore: Gentlemen, I promise not to consume over five minutes.

It is, perhaps, well known that the people of Maryland are a conservative people—that our banks partake of the conservative character of the people, and that very few failures have occurred among the banks of Maryland for over half a century. It is with pardonable pride, we think, that we point to the splendid record of the banks of our State, which, while conservatively managed, are ever ready to foster and encourage legitimate business.

Baltimore, our chief city, has become one of the great financial centers of the country, and its capital has been freely used, not only to build up business enterprises within our own State, but also those of other States.

During the last ten years the financial institutions of Baltimore, including trust and fidelity companies and Savings banks, have increased their funds as follows: Capital, \$13,000,000; surplus, \$23,000,000; deposits, \$61,000,000; a total in-

crease of \$97,000,000, making the aggregate amount, at the present time, on these accounts, nearly \$200,000,000.

Baltimore has been called the gastronomic capital of the country, contiguous as it is to splendid trucking farms, and being supplied with the delicacies of the Chesapeake Bay and its tributaries, such as the canvas-back duck, the diamond-back terrapin and the delicious oyster, all contributing not only to the enjoyment but to the prosperity of its citizens.

It has been my good fortune to attend a number of the conventions of this body and to listen to the delegates extol the virtues, the advantages and resources of their respective States in superlative terms. Mr. President, State pride is a laudable thing. We in Maryland believe in it, and have, perhaps, our full share of it. But of all the States of the Union, State pride is perhaps strongest in our sister State, Virginia. Many of its citizens have settled in Baltimore, and are among its most honored and useful citizens, but they never lose their love for, and their exalted belief and pride in, the Old Dominion. Let me give an illustration, which you, Mr. President, will, I am sure, appreciate.

When the noted evangelist, Mr. Moody, was holding religious meetings in Baltimore, a well-known sporting gentleman professed conversion, and, like others of his class, was put to work by Mr. Moody in the after meetings. One afternoon this new convert approached a gentleman who was in the act of leaving the room, and asked, "Are you a Christian?" "Sir?" said the gentleman. "Are you a Christian?" "No, sir; I am a Virginian."

The Maryland bankers enjoyed last month with the bankers of the District of Columbia the unique experience of a joint convention on board a palace steamer while sailing on the historic Potomac River between Washington and Old Point Comfort and return. It was our good fortune to have with us on this occasion the Secretary of the Treasury, the Comptroller of the Currency and the Treasurer of the United States. These distinguished gentlemen favored us with addresses on subjects of vital interest to bankers and to the country. Amid the fears and anxieties incident upon the financial situation it was a comfort to hear the strong words from the highest officers of the United States Treasury, showing that there was no occasion for alarm, and that the conditions did not justify the fears of a money panic. In listening to those timely words we felt a sense of security unlike the feelings of those gentlemen in Wall Street who, while trying to assure one another amid the falling of stocks that there will be no panic, remind us of the "darker" who was running away from a dog. His master said: "Sam, what are you running from that dog for? You know he won't bite." Sam replied: "Yes, massa, I know he won't bite—you know he won't bite; but do the dog know it?"

Massachusetts. (No response.)

MICHIGAN.

Reuben Kempt, President Farmers and Merchants' Bank, Ann Arbor, Mich.: Mr. President, Michigan is enjoying a period of great prosperity. Her banks are flourishing; her deposits increasing. Michigan's products are so varied that the word failure is unknown. Her citizens are industrious, progressive, prosperous, happy and patriotic. Our cereal crops are excellent, and very abundant. Our fruit crop was never better.

During the past six years Michigan has made great progress in the manufacturing and raising of beets and beet sugar. Her produce in this department leads all other States in the Union. We have manufactured in the last year nearly 4,000,000 barrels of salt. Our salt deposit extends over some 250,000 square miles, carrying a vein of from forty to 150 feet in thickness.

Our copper mines hold no mean position in the production of copper. One mine alone has paid nearly \$100,000,000 in dividends, and has copper enough in sight to pay \$1,000,000 or \$2,000,000 more. Our iron mines are inexhaustible in mineral, supplying as they do the great steel mills of Pittsburg and other points with raw material.

Another infant industry that is being rapidly developed is the manufacture of Portland cement. Our marl beds are of vast extent, and are being rapidly developed, one mill alone turning out some 5,000 barrels of Portland cement per day.

Our coal beds extend over thousands of acres, and within the near future will produce coal enough to supply all of our home wants as well as those of neighboring States.

In the production of manufactured lumber we occupy a prominent position.

Our mineral springs are renowned and noted over the entire length and breadth of our land, their waters restoring the lame and worn-out in body and mind to health and happiness.

The annual tonnage passing through the Detroit River exceeds the tonnage of the great port of Liverpool, over three times the tonnage of the Suez Canal, and it also must be borne in mind that the Suez and Liverpool ports are open the 365 days in the year, while our ports are closed four and a half months, being icebound for that length of time.

But the great pride of Michigan is her educational system, which is unexcelled. The University of Michigan has just celebrated her semi-centennial, and it is one of the greatest and grandest educational institutions of our land. Her attendance numbers from 4,000 students, and graduates annually six or eight hundred, who are to be found in every State, filling positions of honor, of trust and of usefulness. It may be well to remember that it was the University of Michigan that first opened her doors to our daughters, placing them on an equal footing with our sons in obtaining an education fitting them for the earnest duties of life, sweeping aside the fossilized idea of woman's inferiority to man.

We believe Michigan to be one of God's best, greatest and brightest creations, a jewel in the diadem of States. If you wish to see a beautiful country, and a happy and prosperous people, come to Michigan and look around you.

MINNESOTA.

John R. Mitchell, Vice-President Winona Deposit Bank, Winona, Minnesota: One of the advantages derived from these meetings of the American Bankers' Association, and by no means the least advantage, is the opportunity offered of comparing the business conditions in other sections with the existing conditions at home. Voicing the unanimous opinion of the Minnesota delegation, a more interesting and hospitable city in which to hold a convention than San Francisco could not have been selected. While a prominent writer has made the statement that stories are almost the only thing in California which do not need irrigation to grow luxuriantly, it is our conviction that the stories or descriptions of this magnificent State have not been able to half describe what the eye can see.

Now, as regards business conditions in Minnesota, it would be a difficult matter to differentiate between the kind of prosperity existing there to-day and the prosperity elsewhere throughout the Union, as we have all kinds—industrial, agricultural and financial. But why should not prosperity exist, and continue to exist indefinitely, in this great country of natural resources, wealth, industry and boundless possibilities—in this wonderfully productive country? It is entirely a business proposition, in my judgment, staring the country, as a whole, directly in the face. If it is handled in a business-like way our prosperity will continue ad infinitum. Take the State of Minnesota, for example, and a continuance of the present prosperity there to-day is absolutely assured. Why? Because we are a producing State, and our continually increasing products are absolute necessities of life for not only the remainder of the Union, but for the entire world, and they are wanted at a price that affords the producer a fair profit. Such is the future of every agricultural State. The continuance of the prosperity existing in the United States as a whole unquestionably depends on its ability to continue to market abroad at a fair profit its surplus manufactures, which are rapidly increasing. A solution of this proposition does not rest with the American Bankers' Association, I admit; it is one of as much importance, however, as a revision of our present banking and currency law is to every member of this association. It is a question that must be decided by national legislation, but with the assistance of the entire business community, regardless of party or political prejudices.

In order to illustrate the existing prosperity in Minnesota I might quote statistics here which would rival the familiar and remarkable report on what the hens of our neighbor, Iowa, have been able to do; but I will not weary you with statistics.

However, to be brief, I can say that our combined deposits in National and State banks are approximately \$135,000,000, as compared with \$100,000,000 in 1901. The deposits in our Savings banks have increased from \$14,217,000 in 1901 to \$18,424,000 in 1903. The value of the farm products of Minnesota annually is about \$165,000,000. The value of butter for the year ending September 1, 1903, was \$17,500,000. Our flour mills have a daily capacity of 153,000 barrels of flour, which are capable of making 41,000,000 pound loaves of bread. Just think how many

mouths each day that amount of bread would supply. The production of our iron mines last year amounted to 15,384,000 tons, which makes Minnesota the greatest iron-producing section in the United States and also in the world.

A State or individual country becomes known abroad largely by what it has done, is doing, and what it is able to do; and I dare say that no State represented at this convention is better known on the Pacific Coast by the men it produces than Minnesota. To the untiring energy, the almost superhuman foresight of only one man of Minnesota must be credited more than to any other one man the already enormous trade with the Orient, with its limitless possibilities.

The banking conditions in Minnesota were never better than they are to-day. While the demand for money is all that the banks could wish for, every demand from legitimate sources will be taken care of, and the large crop will be comfortably handled.

In conclusion, the only intelligent way in which to get a comprehensive idea of the enormous resources of the great State which I have the honor of representing is to make a personal investigation of it, and Minnesota is anticipating the time when it shall have the pleasure of holding the convention of the American Bankers' Association within its confines.

On behalf of the Minnesota delegation to this convention, I wish at this time to express our great appreciation of this most hospitable reception tendered by the bankers of the western metropolis, San Francisco.

MISSISSIPPI.

J. J. White, President McComb City Bank, McComb City, Miss.: Mr. President, I simply have to say that our State is forging to the front as fast as any State in the South. It is progressing financially, agriculturally and industrially. Three-fourths of the banks in the State of Mississippi belong to the American Bankers' Association, and I have this to say about the solidity of the banks in Mississippi, that we have not had a failure, not even in the panic of 1873, except one little one in the upper part of the State that did not deserve the name of a bank. Still, our banks have all been, and are still, good, solid institutions.

Of course, Mississippi is principally an agricultural State. We raised the largest corn crop this year that we have done for a number of years. There is not a farmer in the whole State but what has all the corn he needs, and some to spare for his neighbors. The cotton crop is not the largest that the State has raised, but it will be a fair crop. Of course, at this time, cotton is bringing a good price.

Industrially, we are making considerable progress. We are building up manufactures; not only oil mills, but cotton mills are being established all over the State. In other words, we are beginning to manufacture our cottons in the fields, as our Georgia neighbors are doing. We are making considerable progress in that line, and, on the whole, Mississippi is getting along well in every way. She has a great crop of fruits, and vegetables she sends North every spring.

I am glad to say that the State is in a progressive condition generally.

MISSOURI.

W. Davless Pittman, Bond Officer Mississippi Valley Trust Company, St. Louis: Mr. President, and Gentlemen of the Convention—I count it a very happy privilege to appear before you in this convention to respond at the roll-call when the name of Missouri is mentioned.

I assure you, gentlemen, that we have the grandest of all the States in the Union, notwithstanding all that has been said to the contrary. We raise cotton in the south; we raise corn and wheat and hay and oats and all the fruits; and, indeed, my friends, we raise, better than any other State in the Union, everything. I am indebted to a Californian for this thought: that Missouri is one of the greatest States in the Union in which to raise children. I was talking to a Californian only the other day, when he reminded me that he had raised a family here in California, and he said that he regretted that he had not raised them back in Missouri, where he was raised. I am very much like the Presbyterian minister. It mattered not what text he preached from, he always concluded on the subject of predestination. I want to say to you that to Missourians, and especially one from St. Louis, it matters not before what convention he appears, it matters not what subject is being discussed, he will tell you concerning the enterprise we now have before us, which is the greatest and grandest

the world has yet undertaken. I refer to the World's Fair, the celebration of the Louisiana Purchase, and I want to say to you that Missouri not only sends her greetings to you, but she sends as well a cordial and earnest invitation to come there and enjoy our hospitable board. I want to say we have had the experience from Chicago and Paris and Omaha, and all the other cities that have given World's Fairs, and I believe I speak the truth when I say that we will combine in this one the greatest and the grandest of all such achievements.

I want to extend to you, therefore, a cordial invitation. We have heard it on all sides that St. Louis has so many conventions going there that she ought not to seek any more. I am reminded of a gentleman who had raised nineteen children, or, rather, was raising them. He went out and adopted two more. He said he had found them so easy and so pleasant to raise, had found the nineteen so easy to raise, that he wanted two more anyway. And I want to say to you, friends, when we extend to you an invitation to visit our city next year in your national convention—I want to say that you will find it very easy and very pleasant and very hospitable to all concerned; and I invite you to come and share with us the glories of that magnificent exposition.

Our friends have been very frank here. They have said it is impossible to speak about the glories of California without lying; but I want to say to you that when you come to St. Louis, and witness the miles of its buildings that are now rapidly taking shape; when you see the men and women there from all parts of the earth, and their mode of living, and that sort of thing, when you return home you will be like the Queen of Sheba, who, after visiting the court of King Solomon, returned and told about it, and then said the half had never been told.

So Missouri sends you greeting, and an invitation to be with you next year and see the whole world, which will be within our domain.

MONTANA.

W. Lee Mains, Assistant Cashier First National Bank, Billings, Montana: Mr. President, I am told that Senator Vest, in one of his speeches, said that Montana was the daughter of Missouri, and so the remark of Brother Pittman, I think, will cover Montana. I will say that with a population of 250,000 we have in our banks \$250,000,000.

Nebraska. (No response.)

NEVADA.

George W. Mapes, President Washoe County Bank, Reno, Nevada: Mr. President, it is said that Nevada does not produce anything but sage brush. That may have been true forty years ago, but it is not true to-day. While it is true that our State is small in population as compared with the Eastern States, yet we produce an abundance of livestock to supply the markets of this city, Chicago, and even New York. Our mines are just coming to the front. We have some of the richest mines in our State which have yet been undeveloped. They run up into the thousands in numbers.

As for our schools and universities, they will compare favorably with those of any other State of the Union.

I must contradict my friend from Missouri in regard to raising children. We had one mother in our State, that I know of, who had sixteen children, and, growing up, they weighed over 200 pounds each. I want to add another word, and that is that, traveling through the Eastern and the Western States, as I have, I believe that Nevada produces the prettiest and most generous and the brightest women of any of the States in the Union.

New Hampshire. (No response.)

NEW JERSEY.

John J. White, of Atlantic City: Mr. President, under the head of new business to-morrow—which, I understand, is the proper place to bring it up—I shall have a greeting from the State Bankers' Association of New Jersey, which I trust and hope will be acceptable to you.

New Mexico. (No response.)

NEW YORK.

Stephen M. Griswold, President Union Bank of Brooklyn: Mr. President, and Gentlemen—I have the honor to report to you that we held our tenth annual convention last month at Saratoga Springs. The attendance was large; every

part of the State was represented, and in all respects it was one of the most successful conventions we have held.

The work of this American Bankers' Association, our State associations, and the group meetings, is producing good results. We are working for reform in the banking business all along the line. It is producing a friendly and a cordial feeling, not only among our country banks, but among the great banks of our cities. The past year has been one of depression; securities have fluctuated; some have declined. But we feel that that troubled condition of the financial world is about passing away. With the earnings of our railroads increasing, and the labor troubles being settled, we feel that we are on the eve of prosperous times. The unity and the strength and the friendship that exist among the banks of our great States will stand at all times against financial panic and ruin.

NORTH CAROLINA.

Joseph G. Brown, President Citizens' National Bank, Raleigh, North Carolina: Mr. President, it has often been my privilege, and it is always my pleasure, to say a word in behalf of my native State. Upon this occasion, however, with so beautiful an object lesson before us, I should say it is necessary only to say that North Carolina is but a miniature of this magnificent State of California, with all her natural beauty and natural wealth. You have heard and seen and felt of the golden glory of California's sunshine, of the vigor of her air, of the marvelous beauty of her fruits and flowers, and her fertile valleys, and the grandeur of her towering peaks, the fertility of her soil, and the sweet hospitality of her people. All these things may be found in North Carolina.

North Dakota. (No response.)

OHIO.

J. J. Sullivan, President Central National Bank, Cleveland: Mr. President, I only appear before you this morning because the gentleman selected to respond for Ohio does not happen to be in the hall; and not desiring that Ohio should appear in default, I am a sort of self-constituted substitute for the gentleman who is prepared to speak for Ohio.

Appearing before you, then, in this manner, and under these circumstances, it is needless to say to you that I have no statistics to give you of the magnitude of the State from which I come, or the success of its industries. Neither have I poetry at my command by which I might amuse you in speaking for Ohio. I will say, however, that business conditions are unusually prosperous. In the financial situation there are no weak spots. We have 810 banks in the State of Ohio, with aggregate deposits of nearly \$450,000,000. Our banks have a good demand for money, and they are experiencing a high degree of prosperity. Of our 810 banks, 620 are members of the Ohio Bankers' Association. The interest which our bankers and our people manifest in the American Bankers' Association is evidenced by the fact that we have with us here 125 of the bankers of Ohio, and their friends.

We take an active interest in everything pertaining not only to the Bankers' Association of Ohio, but also to the American Bankers' Association. We have a high regard for the banking fraternity in our State, and we have emphasized that regard recently by nominating one on one of the tickets for the governorship of Ohio, the gentleman who served us so well as your president, Myron T. Herrick. Not only have we nominated Mr. Herrick, but we also expect to elect him.

I could talk to you at great length about Ohio, but I am sure it is unnecessary. Ohio has had an existence of more than a hundred years, and I believe that I can say truthfully in regard to its production and its general standing as a State, it is not surpassed by any State of the Union. If, indeed, a State is measured by the character of its great men, I believe that Ohio will not suffer by comparison with any of its sister States.

Now, my friends, I have talked much longer than I thought I would, and I want to say one word further, and that is this: that I am much delighted with the statements I have listened to regarding the business conditions in the different States of the Union. It is gratifying to us to meet gentlemen of intelligence and grand moral worth from different States of the Union expressing as they have the prosperous condition which seems to exist everywhere.

On motion the convention adjourned until Friday, October 23, 1903, at 9.30 o'clock A. M.

THIRD DAY'S PROCEEDINGS.

Friday, October 23, 1903.

The convention met at 9.50 o'clock A. M., President Caldwell Hardy in the chair.

Prayer was offered by Rev. Bradford Leavitt, Pastor of the First Unitarian Church, San Francisco.

THE PRESIDENT: We will resume the Call of the States that was unfinished at the adjournment yesterday evening.

OKLAHOMA.

H. H. Watkins, Cashier Citizens' Bank, Enid, Oklahoma: Mr. President, Ladies and Gentlemen—The bountiful crops, large bank deposits, good dividends and the general prosperity of our Territory are so well known that for me to say anything regarding our resources would be superfluous.

However, I will say that we have 39,000 square miles, a population of 600,000 and 13,000 public schools, more than 15,000 pupils, and more miles of railroads were constructed in Oklahoma in 1902 than in any other State or Territory.

While attending this convention and taking advantage of the many opportunities afforded us of seeing this beautiful city by the San Francisco bankers, my attention has been called to the many magnificent monuments erected to commemorate the daring and noble deeds performed and discoveries made by her pioneers, and while I most heartily favor the erection of such monuments, yet I think one of our great men has been overlooked. I do not know who he was, or where he lived, but I am in favor of erecting a monument to the man who first discovered interest.

We are living in a Territory, although we have all the requirements of Statehood, yet through the actions of politicians, or otherwise, we are unable to get into the Statehood column. I would like to see this convention pass a resolution favoring immediate Statehood for the Territories.

OREGON.

Benjamin I. Cohen, President Portland Trust Company, Portland, Oregon: Mr. President, and Gentlemen of the Convention—As you know, Oregon lies immediately north of California, and has many of the natural and other advantages that California has. Oregon believes in sound finance and in stable values. We feel proud of our State. We would like to have you visit us, and we hope as many of you as can do so will pass through Oregon on your way home. I can assure you of a hearty welcome.

PENNSYLVANIA.

E. C. Emerick, Treasurer Susquehanna Trust and Safe Deposit Co., Williamsport, Pennsylvania: Mr. President—I wish to state that Pennsylvania speaks for herself, or, rather, her industries speak for her. The States of this Union, and all the civilized countries of this world, are bound together with an iron band. This iron band is manufactured in the State of Pennsylvania, where iron is vania's citizens have been prosperous beyond measure; her industries have king. We are proud that we hold the key to the king of industries. Pennsylvania increased, and her bank deposits have grown wonderfully in the last few years. I have not the statistics at hand, but I know that that is the case. Pennsylvania is enjoying her share of prosperity that it is the privilege of this country to enjoy, and we feel that it is unnecessary for us to say anything more for our Keystone State.

Rhode Island. (No response.)

SOUTH CAROLINA.

John F. Ficken, President South Carolina Loan and Trust Co., Charleston, South Carolina: Mr. President—I regret very much that the gentleman who was to speak for South Carolina is not here. I am now charged with that duty, and feel somewhat awkward in attempting to reply. But I cannot let the State go by default, and therefore I suppose I might occupy a few minutes in stating some things in reference to our State.

I am emboldened to do this because, after listening to the distinguished representative of Arkansas yesterday, and hearing what he had to say for that great State, I feel as if I might say a few words for our little State. It is a long way from here, over three thousand miles, and ought to be heard from.

Now, what shall I talk about? This is a bankers' convention, and I suppose we ought to say something about finance. Well, I can say to you that our banks are all in good condition. Our banks are healthy and prosperous. We are a small State, it is true, and when I think of that, and then think of the great States that have been represented on the floor here—great as regards population and finance and ability to cope with the world—I am reminded of an anecdote which possibly all of you have heard, but it is very forcible, and I will repeat it. It is the story of the raw recruit and his sergeant. The new man was a tall and strapping fellow who stood high up in the air, and the sergeant who drilled him was a diminutive man. Of course, the sergeant was glad to exercise his authority over the big fellow. He looked up at this great piece of humanity and said: "Hold your head up." The recruit raised his head. "Hold it higher." He raised it still higher. The sergeant said: "Higher than that." So he kept raising it. The sergeant said: "Now, keep it so." The great big fellow looked down at the sergeant and said: "Shall I keep it so?" "Yes," said the sergeant. "Very well, sir," said the recruit, "but if I keep it so I will never see you again."

So we are reckoned as a small State. South Carolina is an agricultural State. We plant cotton all over the State from the Atlantic Ocean to the Blue Ridge. Every county in the State has its cotton bales, which it sends to the market, and which is our main crop, and helps along.

Now, I do not want to boast, but I will tell you a fact about our little State. When the last count was taken South Carolina led all the States of the Union in the amount of capital invested in cotton factories, except Massachusetts.

That is what our little State is doing. When you remember that after the close of the Civil War we were actually prostrate—why, all over the country it was designated as the prostrate State—what have we done? Our people recognized the situation and turned their backs upon the past, and they have opened up this new field and gone into industries, not only to plant and grow the cotton, but weave it into cloth. That has brought prosperity.

One or two other facts I will allude to if I have time. If you look at your maps you will find that the shortest distance from San Diego, California, to the Atlantic Ocean is to Charleston, South Carolina. If you will look again at the map, you will find that the shortest distance from Chicago to the Atlantic Ocean makes you come out at Charleston, South Carolina. Indeed, we were so ambitious in our little State that we organized what we called "the three C's road," Chicago, Cincinnati and Charleston. We were so ambitious that we wanted to build a double track. It has not been built yet, but that is the shortest distance between these cities, and we hope to see it done.

Those are some of the facts that I wish to present to you. We do not say it boastfully, but we have a becoming pride in our old State. As you know, it was one of the original thirteen States. The city of Charleston is two and a half centuries old, and it is a beautiful city. At that point the United States Government has established a navy yard. We invite you all to come and see us, and if you come, I believe you will want to stay with us—will want to be a part of our community. I can assure you of a warm welcome.

South Dakota. (No response.)

Tennessee. (No response.)

TEXAS.

A. V. Lane, Vice-President National Exchange Bank, Dallas, Texas: Mr. President, Ladies and Gentlemen of the American Bankers' Association—Through deserts and o'er many a snow-clad mountain peak, along two sinuous bands of gleaming steel that bind the fertile fields of Texas to this lovely land of treasure, fruits and flowers, I come with greetings most sincere from the bankers of the Lone Star State to those of you assembled here in this city by the Western sea, with its ever-open Golden Gate, through which the traffic of the once-mysterious and legendary East is jostled, as it passes in, by the surging mass of surplus products of the greatest commercial nation in the world, seeking an outlet among the countless millions that lie just beyond our still more western boundary but late established by the prowess of our heroes' arms.

I come from a State whose history is unique, and withal most glorious; a State whose people have felt the benumbing influences of Mexican inaction, the crushing power of Spanish cruelty and despotism; a State of which it has been said, "Thermopylae had her messenger of defeat, the Alamo had none."

But glorious as is the past, her people look not to the past; their path is onward, and their eyes are fixed upon the rising sun of future progress and achievement. A State whose climatic conditions and varied industries are such that it is almost impossible for any calamity to hurt all of it at once. A State whose resources have just begun to be understood and whose ultimate development is beyond the most vivid imagination of even its most loyal inhabitant. But I must not allow myself to be led into statistical detail.

About two years ago I had the honor of being called on at a banquet of the Louisiana Bankers' Association for a talk on Texas. I gave them a few plain, unvarnished facts. Reminded them that it is about the same distance from Chicago to Texarkana in East Texas, as from Texarkana to El Paso in West Texas, or from El Paso to San Francisco; told them that we raised almost one-third of the cotton crop of the United States; told them of our lumber, rice, oil, etc. You really cannot exaggerate in talking about Texas. But, do you know, I have had a painful impression ever since that about the only crop I convinced my hearers we raised in unusually large quantities was a long and virile list of lineal descendants of that aged couple made notorious by Holy Writ, one of whose names began with A and ended with S, the other with S and ended with A; so that, one beginning where the other left off, together they held a corner on the prevarication market. So I shall content myself with saying, "Come and see." You will find a hospitality as broad as the State's own vast expanse, and a citizenship so proud of their beloved land that the busiest one among them will be only too glad to take a day off, or a week off, to show you and to tell you something of its wonderful resources. Come, I say, and see for yourselves.

Vermont. (No response.)

Virginia. (No response.)

WASHINGTON.

Jacob Furth, President Puget Sound National Bank, Seattle: Mr. President, and Gentlemen of the Convention—I listened with a great deal of pleasure to the gentlemen who spoke on behalf of their States. I admired their loyalty to their respective States, and the description of their various resources was most interesting. I have been asked to respond to the call of our State. The State of Washington, although a young State, shows health and vigor.

Twenty years ago the State of Washington had only three small towns; the largest of the three had then about five thousand inhabitants. To-day that city has a greater population than the entire State had at that time. We now have five large cities—Seattle, with a population of 140,000; Tacoma, 80,000; Spokane about the same number, and Everett and Whatcom, each with 20,000. The cities of Seattle, Tacoma, Everett and Whatcom are situated in the western portion.

The resources of the western part of Washington are varied. We have timber that cannot be surpassed in any section; we have coal, iron, granite and other mining industries. Our salmon fisheries and salmon canneries are the largest in the world. We export lumber and flour to South America, Australia, China and Japan. Our fish is exported to England, principally. We raise hops in large quantities. I have known one field of hops to produce from fifteen hundred to two thousand pounds per acre. We have oats that are equal, if not superior, to those of any country.

The eastern part of the State is the farming section. The production of wheat and barley is marvelous. We export wheat to England, and the cattle that are raised in that section of the State are sent to Omaha and Chicago to be distributed all over the country. The fruit raised in that section is shipped East, and is said to bring the highest prices.

The limited time allowed me in which to describe our State compels me not to go further into details. What I have said will be sufficient to give you an idea of the prosperous conditions existing in the State of Washington, and if any one of you gentlemen doubt, I would advise you to visit us on your homeward journey. I am confident that any one visiting the State of Washington

will be paid for his trouble, and the veracity of my statements will not be questioned any further.

WEST VIRGINIA.

E. M. Gilkeson, Cashier Second National Bank, Parkersburg, West Virginia: Mr. President, and Gentlemen of the American Bankers' Association—Our time is limited this morning, and I shall not tax your patience to any appreciable extent. I simply desire to submit a few facts and figures in reference to West Virginia, by the way, one of the best all-around States in the Union.

West Virginia's natural resources have but fairly begun to be exploited. In the production of white sand oils she ranks first among the States of the Union. In natural gas she produces the largest amount of any State and exports it very largely to Ohio and Pennsylvania.

She produces a great variety of woods, and in hard woods has the largest production of any State.

Her nearly 16,000 square miles of bituminous coal area are destined to make her the leading bituminous coal-producing State. Already she ranks third in the production of bituminous coals, and it is a question of but a few months until she will surpass Illinois and commence to overhaul Pennsylvania in the production of bituminous coals.

Her great variety and the wonderful richness of her coking coals have already made her the second coke-producing State of the Union, and she is destined soon to pass Pennsylvania and to take first rank in the production of coke.

She is rapidly becoming the leading glass manufacturing State, and is destined to the leadership in this particular industry.

West Virginia has a larger area of blue grass territory than her sister State which boasts of the distinction of being the "Blue Grass State"; and the value of the agricultural, horticultural and animal industry of the State last year exceeded the value of the combined output of her mineral products, great as they were. West Virginia is becoming one of the leading fruit States of the Union, while her long-fleeced wools have for many years been the premium wools of the country.

The iron industry has also been an important one in the northern panhandle, but is becoming more generally distributed over the State, and in pottery and iron working West Virginia is taking a very prominent position.

The value of her clay products exceeds that of any other Southern State and is rapidly increasing.

Her variety of climate and soils, and her nearness and accessibility to the markets, make her situation especially advantageous agriculturally, as well as in the marketing of her great mineral wealth.

Among her natural resources which I have not referred to, but which are worthy of mention, are her numerous and widely-distributed thermal and non-thermal mineral springs. Nature has been very prodigal in giving her every variety of springs for the healing and blessing of mankind.

As a State, West Virginia owes no debt, and has a cash surplus in the treasury.

We have a refined, hospitable and happy people. Those seeking new homes or capital seeking investments cannot find a more promising land than West Virginia.

Come and see us, and be assured we will give you the right hand of fellowship.

WISCONSIN.

John M. Holley, Cashier State Bank of La Crosse, Wisconsin: Mr. President—Wisconsin needs no encomium, although I assure you she is worthy of the highest that could be passed upon her. It is her misfortune, not her fault, that she comes last in the list of States, and therefore must content herself not with a statement of her resources and advantages and wealth, but must simply bear a message of greeting to you. It would require a book to tell all Wisconsin's merits and her greatness and prosperity; possibly all the world could not contain the books that might be written about her. You would need to get up early and sit up late, and be possessed of a past master's art in the use of the figurative and the embellishment of words and the superlative to do her justice, and to give her a proper place in the gallery of picture photographs that have been placed before us by her sister States.

Therefore, since the overwhelming hospitality of our entertainers has prevented the first, and the speaker is not competent to use the latter, Wisconsin's greeting must be in simple words—we say simply that she remains true to those things that make for the best in education, in morals, in commerce, in manufactures and in finance.

Wyoming. (No response.)

WILLIAM GEORGE, of Aurora, Ill: Mr. President, if it would be proper I wish to call the attention of the convention at this time to the serious illness of Mr. Frank W. Tracy, of Springfield, Illinois. He has done so much in behalf of the uniform Negotiable Instruments Act in the different States that we are all indebted to him, and inasmuch as his illness is very serious, I suggest that the secretary be authorized to send a telegram to him, and I would respectfully suggest the following form:

The members of the American Bankers' Association, assembled at San Francisco, California, send you greetings and wish to express their appreciation of your enduring and persistent efforts for the adoption of uniform laws. They regret your absence and hope for your speedy recovery.

I move that such a telegram be sent by the secretary of this association.

The resolution was unanimously adopted.

THE PRESIDENT: There is left over the report of the currency committee. There was a report presented by the executive council, and I think action will come up on the recommendation of the council, which will be presented by Mr. Pugsley.

C. A. PUGSLEY, President Westchester County National Bank, Peekskill, N. Y.: Mr. President, the currency committee, composed of men eminently qualified to deal with this intricate problem, and representing different sections of our great country, after much discussion and consideration have presented a valuable and conservative report, without a single radical feature in it. It may be said that there is nothing new in the report, but this question has been discussed for years by bankers in convention, by Representatives in Congress, and by the press. The discussions have taken a wide range, embracing almost every feature of the currency question. Some have favored more currency; others have held as tenaciously to the position that there was money enough for all practical purposes. We have had suggestions as to emergency circulation, supplementary circulation, elastic currency, and currency issued by clearing houses, and numerous other devices and suggestions as to the rate of tax to be applied to such currency, and whether it should be issued freely at the option of the bankers or under the authority and direction of the Comptroller of the Currency.

There is no doubt that our system can be improved, but I do not believe it will be revolutionized. It is essential that its volume should rise and fall with the varying tides of business and commerce. It is the most important measure before this convention. It is important, because it reaches, and should interest, all sections of our republic. A sound and stable currency is the life-blood of the nation's commerce and prosperity, and it is of vital import, not only to the banking and commercial interests, but to the people of the whole country, that our currency should be sound beyond question, and good beyond peradventure. The great essential of any currency is quality rather than quantity, and I am glad to say that the bankers and citizens of California have ever stood for quality and that they also have evidently been successful in obtaining quantity.

Wherever our flag waves, from the islands of the Atlantic to the distant islands of the Pacific, and from the sunny South to Alaska, with its eternal

snows, we should have the best currency that the brain and skill of America can evolve. We want to see the world's standard the American dollar, and our currency system surpass that of any other nation on the face of the globe; but only by the most conservative legislation can this be accomplished. In its broadest sense it is a national question. What is of the greatest value to the people should be the aim of bankers and all legislation, and not what should be of the greatest value and assistance to the banks. The banks are the servants of the people, not the masters. The people are keenly interested in this question, and not only is it being considered and discussed by the President of the United States, by Representatives in Congress, by the press, by the banks, but by the people at large.

I do not believe that the bankers of this country, for selfish interests and purposes, will do ought to retard the general prosperity of the country. On more than one occasion they have shown themselves patriots, and I believe they will urge and favor only such legislation as will result for the country's good.

I have been instructed by the executive council to present this resolution:

Resolved, That the report of the currency committee appointed under resolution passed at the last annual convention of the American Bankers' Association, held at New Orleans, be adopted, and that the president of this association appoint a committee of three for the purpose of urging legislation along the lines recommended in the report.

I move, Mr. President, the adoption of this resolution.

G. W. GARRELS, President Franklin Bank, St. Louis, Mo.: Mr. President, as I understand it the committee was appointed to investigate the currency of the United States. I do not find anything in the report covering that point. I expected they would have shown us the faults of our present currency as compared with the currency of other nations. My friend, Mr. McAshan, from Houston, said yesterday that sovereignty would be the only power that could create money. I do not believe in the statement. On the contrary, I know that labor, services and goods are exchanged for another commodity, for a general commodity, which is, by the survival of the fittest, gold; and that all other substitutes merely represent the gold in the exchange of commodities, of labor and services.

My friend Mr. Pugsley mentions that California and several other States adhered to sound money during the Civil War. That is, in other words, they did not recognize the legal-tender of our currency law, which was passed during the exciting times of the war.

Now, I consider this legal-tender clause the very commencement of the deterioration of our currency system. It was the entering wedge to upset the principle. Congress had no right, under the Constitution, to pass a legal-tender clause. The constitution forbids the invalidating of the obligations of contracts. Eminent legal talent, our Chief Justice, Mr. Chase, has given an opinion that the legal-tender clause was unconstitutional. Other eminent politicians have held the same thing. Daniel Webster, who was considered an expounder of our constitution, said that it was unquestionable that the United States had no authority to pass a legal-tender clause.

The legal-tender question at the present time is hardly thought of; but it is the principle involved. The child learns that every dollar printed by the United States is money. It was because of the greenback craze, it was partly the cause of our silver agitation. I have talked with eminent minds in the legal profession, merchants and bankers, upon this very question at the

time, in 1896, when the silver agitation was going on. At the time the argument was always that the United States had the right to make money.

A legal-tender clause is the last refuge of a bankrupt government, and I consider it a blot on the laws of the United States. As long as we have the legal-tender clause in our laws we will have false ideas about the currency. It seems to me, what ought to be done first is to repeal that clause.

We had a very excellent recommendation of a perfect system of currency mentioned by the Comptroller of the Currency in his very excellent speech yesterday. He said that we ought to have gold with gold certificates and subsidiary coin in gold redeemable currency, and I would be in favor of the American Bankers' Association adopting a resolution to that effect.

EDWARD J. PARKER, of Quincy, Ill.: Mr. President, I will offer as a substitute for the resolution of the executive council the following:

Resolved, That the committee be continued, its report referred back to it, and the committee be, and it here by is, instructed to act in conjunction with similar committees appointed by the various State bankers' associations, to follow all proposed legislation introduced in the Congress of the United States affecting the present banking laws, and to take such action with reference to the same as they may deem best; and be it further

Resolved, That the president of this association shall have power to fill any vacancies occurring on the committee.

If that meets with a second I will venture upon a few remarks.

The motion was seconded.

MR. PARKER: Mr. President, we all realize the difficulties of this able committee, whose report is before us. It is chiefly the indisposition of the Congress which will shortly assemble, in special or regular session, to take up this question, with the Presidential election coming on next year. Therefore, your committee has wisely introduced here a moderate report. If it would press passage it would, I think, bring about a broad discussion and differences of opinion. It is best at this time that members of the American Bankers' Association should go before the country rather with a united front than to split up on the various recommendations of this report into factions.

How far do we agree with the committee? I think on several propositions, or suggestions, we agree perfectly. On one or two we shall differ. Bankers, like the community at large, confound credits and currency. We have just passed through the most remarkable liquidation in values of stocks and bonds which has ever been known, a shrinkage of many billions, without serious financial trouble. That liquidation involved no use of currency. The movement of the crops south and west and northwest, sent demand rates in New York city last year to fifteen per cent. This year one and a half per cent. For the same reason they are holding on to their moneys now. Those periodical changes in rates are to be expected.

Look at this question from the point of view of the public, not the banker. We are all borrowers, and we have large interests in one way or another, in the large corporations we represent. It is a hardship, and under our present monetary system the losses are simply frightful, and we should have reforms brought about as soon as possible.

We accept the figures of the committee as being accurate as to the different issues and amounts held in the Treasury of the United States, and also in circulation. Some of us would think that there ought not to be that quantity of money in Uncle Sam's vaults. What is this Government? It is a government of the people, by the people, for the people, and the money in the vaults belongs to the people. It is an awful responsibility to force

upon the Secretary of the Treasury. I do not say, and I will not allege, that Secretaries of the Treasury in the past have gained a competency in a single day, or a single hour, with their knowledge of what would come about. I do say, and I know what I am talking about, because I know him intimately, that the present Secretary of the Treasury is an honest and incorruptible man, and would not take advantage of his official position. I do predict—generally I keep off the ground of making any predictions, either as to the weather, or any financial prognostications—but I will say this, that if our present currency system continues there will be Secretaries of the Treasury who will be corrupt, and who will bring disgrace upon our country, having such vast powers in their hands; and I will say right here that under a wise, scientific currency basis, we would not, as we ought not to, ever turn our faces to the city of Washington for any help, because as bankers of this country we can, as the bankers did before the Civil War, help the United States Government when they had to. That was notably so in one case.

You say get Uncle Sam out of the banking business. He is not in it. To prove it I will say that when there was danger of a silver basis, and Uncle Sam could not protect the coin in his Treasury, he had to call on the bankers, and they not only took the gold off the steamers going to Europe, but they guaranteed that they would keep the Government on a gold basis for six months—and it has remained there ever since.

Now, Mr. President, I think we will all agree that the law should be repealed which gathers into the Treasury of the United States, and keeps there, such an enormous amount of gold. That was passed during the exigencies of the Civil War when the Government was putting out United States bonds, interest payable in gold, and the Government had to have the gold in its own vaults. Bonds rose very nearly three billion dollars in a month. They have now receded to nearly one billion dollars. Hence there is no longer necessity for keeping that gold in the Government vaults.

I do not think we will dissent from the recommendations of this committee in that respect.

Secondly, as to the repeal of the limitation in the National Banking Law, restricting the contraction of notes to three million a month, what has transpired? The same this year as last year.

When the Secretary says, "I will accept your bonds for deposit in the United States Treasury," out they go, and the circulation is contracted. Notice is served on the Comptroller of the Currency that up to December, three million dollars a month would be withdrawn, at the very time of the year when there ought to be an expansion of the currency.

Now, we know that our friend, Mr. Whitney, of New Orleans, is a clear-headed man. He dissents from that conclusion of the committee. But that contraction ought to be rapid at times, just as rapid as the output of the currency at the beginning of the crop season, as it was in the banks of the Suffolk bank system. I knew a time when a New England bank note stood as well in the West as a Treasury note does to-day, but that output and contraction was as rapid as the tides of the ocean, and it can be again, and will be under an ideal currency. But we cannot come this year, or next year, or possibly in a generation, to ideal conditions. We will, however, some time. But before that the demand obligations of the Government must be retired, the people's money taken out of the sub-Treasury, expansion and contraction operating periodically and automatically like the tides of the sea. Now, we do not dissent from that.

Where we would dissent is on their suggestion about an emergency circulation. If there were ideal conditions there would be no necessity for the emergency circulation. Possibly, we may have to come to something like that, but not in the way suggested here. Their suggestion cannot be put into operation.

The interior banks of the United States are not going to buy bonds; or conduct correspondence with the Comptroller of the Currency or the Secretary of the Treasury as to the possibilities of putting out an emergency circulation, long before they would get to the crisis and beyond. The great strain is this awful contraction of credits.

Now, I say that clause should be inoperative. I say a uniform tax would be unjust. The only bodies, in my judgment, that should pass upon securities to secure an asset of credit currency, or emergency currency, as you may choose to call it, would be the clearing-house associations of the United States. You cannot practically impose this new duty upon the Comptroller or the Secretary of the Treasury, and they have not the force, nor have they the knowledge, to pass upon the vast amount of assets which we hold in our banks. They could not do it, and no gentleman cares very much to serve on the clearing-house committee to do it.

Now, if we have an emergency circulation, again, it ought to be in place of the present issues, for we have a credit issue. We had it in 1873, we had it in 1884, and we had it in 1893, and we possibly will have it again. I do not speak for the New York city banks. But suppose we do. They (the clearing-houses) are voluntary associations. They are not even incorporated. There should be a legal issue and all banks and bank houses should be allowed to participate in those issues, all members, whether they are National bankers, state bankers, or trust companies.

Illinois, Iowa, and I think Wisconsin, have recently appointed standing committees to take up currency reform and to appear in Washington. Other States will follow—New York also.

Now, let this National association affiliate with and act with us and get the benefit of our judgment, and let us adopt the trust idea, that in union there is strength. We cannot submit these questions entirely to the national association. Our State associations have opinions of their own. If an emergency circulation is ever to be put out, it should be regulated by clearing-houses in different parts of the country, taxing it ten per cent. in Texas and Colorado and a lower per cent. in some other States. It would be discreditable to associations in Eastern States to put out a credit issue at such a rate of interest, or even as high as six per cent. It should be graded differently over different parts of the country. Hence, I take it that would be inoperative. But we do not want to go into this, but simply refer it back.

Now, Mr. President, I have taken up a good deal of your time, more than I meant to, but I will simply say this: A preacher recently, in addressing a Sunday school, asked the scholars what he should talk about. A boy spoke up and said, "about two minutes." Now, I had intended not to make a speech, but simply to make two points. So, let us dispose of it.

ANDREW J. FRAME, President Waukesha National Bank, Waukesha, Wis.: Mr. President, the campaign of education on the money question, which for thirty years has agitated this country, is drawing to a close on sound lines. The report of the currency committee of this convention takes another step upward.

The comedy of sixteen errors to one truth has met its Waterloo. Branch banking in the United States has been relegated to the rear, and the rights

of the individual banker who has borne the heat and burden of the day in our development are to be respected; but in commanding the world's commerce international banking is necessary.

Asset currency, with its first lien to rob the depositor, has not been considered by the committee, and is doomed to certain defeat. It seems evident that a life-line ought to be thrown out to the over-buoyant banker in the shape of a rubber currency every time he gets beyond his depth.

Political economists of all ages have wrestled unsuccessfully with the elastic problem, and thousands of our brainy citizens have racked their brains for years for a sound solution, but failed.

We are now considering the only reasonable problem, and that is relief in case of emergencies.

The committee report provides for the issue of additional National bank circulation on deposit of securities "with careful limitations" under a six per cent. interest rate, to insure its quick retirement as soon as the pressure for funds is over. If this measure is not abused or the door broken down, the measure of relief is of great value to the National banks, and indirectly to all banks.

Permit a suggestion, which it seems to me covers a wider field and is hedged around by the conservative business element and politicals will never enter in, to-wit:

Legalize clearing-house National bank notes on the same form as National bank currency, secured by clearing-house certificates issued on the same plan as heretofore, to any bank in the clearing-house to whom the clearing-house committee sees fit to grant it. Five or six per cent. interest to be charged from date of issue to date of deposit by the borrowing bank, of funds with United States Treasurer to redeem its borrowings, when the clearing-house certificates will be canceled and securities returned.

This will permit not only National but State, savings or any other clearing-house bank to get advances in times of financial stress. Country banks can get advances through their correspondents, thus serving all the banks of the country.

The conservatism of the clearing-house committee will prevent unnecessary issues, the rate of interest will prevent inflation, and redemption will automatically take place as soon as pressure for funds is over.

This remedy will provide all with the needful to loan to all solvent parties, with doubtless the same result as when in 1847-1857 and 1866 the Bank of England illegally issued notes on a deposit of securities in the issues department and thus relieved panic conditions at once.

It is far preferable to the clearing-house certificates issued in this country in 1873, 1884, 1890 and 1893, which gave relief on those dates, because it provides cash on National bank form of notes, which central cities can ship to correspondents, whereas certificates could not be so used.

As the Secretary of the Treasury is periodically importuned to give relief, he, doubtless, would hail the remedy with a sigh of relief. The remedy for trouble in the great centers would always be at hand. It would be a check valve on the bears against locking up funds. It would give relief practically to all when relief is most needed, and therefore, as the committee's report is a step in the right direction, I shall vote for it.

When a patient is seriously ill at times, bad tasting medicine may not be palatable, but necessary to recovery. As between selling sound securities at panic prices to obtain cash, is it not far better to provide cash as

indicated, in order to allay troubles and be able to loan to all solvent parties in their hour of need?

National banks ought not to monopolize benefits. State and Savings banks and Trust Companies fill a necessary place in our development. As the underlying principles of the report are eminently sound and only differ in details, I congratulate the country that our standard of value is to be maintained and therefore vote for the report.

MR. PUGSLEY: Mr. President, in speaking upon the resolution presented by Mr. Parker, I would say that I understand it is impracticable to continue that committee. They are widely scattered over the United States. They have presented a report after much discussion and consideration, and I believe that we are asking too much of that committee to ask them to have further meetings. They represent, I believe, the brains of this country, and I believe it is quite essential that the thought of the American Bankers' Association should crystallize around some proposition, and it seems to me we cannot have it crystallize better than around the report which has been so ably presented by the committee appointed at New Orleans.

I therefore hope that this Convention will pass the resolution submitted from the executive council.

MR. HUSTON, of Marshall, Mo.: Mr. President, the time is short, and we would like to have an opportunity to vote directly on this question, if possible. I now move that the amendment offered by the gentleman from Illinois be laid on the able.

The motion was seconded.

MR. PARKER: I want to first answer the gentleman on my left. The three-million dollar limitation in the National Banking Law was intended at the time as an inflation to keep notes out.

Replying to Mr. Pugsley, let me say that in his first statement, in introducing the committee's resolution, it was said that it was the most important matter, substantially, that would be brought before us. We have had standing committees in this house on uniform laws, and on fidelity insurance, continued from year to year. Are there not gentlemen in our country who are willing to serve on a currency committee? Is the question not important enough, and with the funds in the treasury of this association, could it not pay the traveling expenses of these gentlemen? Let me say right here, when I propose a measure on financial legislation in Congress I want to meet one thing squarely, and that is that the bankers of the United States have no money to bribe a single Congressman in Washington. I am speaking now of the money in our treasury to be used to pay incidental expenses. That could be used to pay the traveling expenses of gentlemen, and such things. Moreover, we should be in touch with the State bankers' associations, and this would bring us together, possibly, in the city of Washington, and my substitute provides for the filling of vacancies by the president, if any of these gentlemen wish to step down and out. Others will take their place if any wish to step out.

And, Mr. President and gentlemen of this convention, if there is any one thing that the political parties of the United States need, and the American Bankers' Association and our various State associations need, it is some man big enough and wise enough and practical enough as a political economist to lead bankers and the customers of bankers on to a more solid ground in the matter of currency reform, and a practical working monetary basis, without these awful contractions, and without these great losses to all the people of this country.

THE PRESIDENT: In order that the convention may understand clearly the resolutions which we have before us, I will read them.

The president then read to the convention the resolutions offered by Mr. Pugsley.

THE PRESIDENT: Mr. Parker offers as a substitute the following:

The president read to the convention the substitute offered by Mr. Parker.

THE PRESIDENT: Mr. Huston offers a resolution to lay on the table the resolution of Mr. Parker, and we will first vote on that.

A DELEGATE: As a parliamentary procedure, would not the adoption of that motion lay the whole matter on the table?

THE PRESIDENT: I should hardly say so. If the amendment is voted down, you would then have the right to vote on the original proposition.

Mr. Huston arose and addressed the Chair.

MR. SULLIVAN: Mr. President, I rise to a point of order. A motion to lay on the table is not debatable.

MR. BIGELOW: I fear, Mr. President, that, technically, to lay this on the table would kill the resolution.

THE PRESIDENT: That may be possible, and if that be so, I will suggest that Mr. Huston withdraw his motion and let us take a vote on the substitute offered by Mr. Parker.

MR. HUSTON: I will withdraw my motion to lay on the table.

A DELEGATE: Mr. President, before taking a vote, will you read the report of the currency committee?

THE PRESIDENT: It has been printed and distributed. It was distributed two days ago.

MR. BIGELOW: Mr. President, I want to go on record as saying that in some respects I think the report of this currency committee, written by very able men, is taken too seriously. It should not be considered that that committee, because of the present exigencies, has sat down upon a credit currency under proper restrictions and redemptions. I think that it is unwarranted to come to such a conclusion. What the committee has done has been to sift the possible recommendations we can get at this time; that is perfectly clear. They want to get out of the ponderous operation of the sub-Treasury system, and they have said that currency could be retired when banks think it should be retired. There is a time when money may be in very great demand, when currency may be retired properly, the loaning power of the bank not being decreased thereby.

There are many things in the report of great value. Although I think there is some merit in Mr. Parker's desire that it should be further considered, yet, on the whole, I am strongly in favor of the report as made by the executive council, as recommended by them. It is on broad lines and I think it is all that can be expected at the present time.

The question was taken on the adoption of Mr. Parker's substitute. The motion was lost.

THE PRESIDENT: You will now vote on the original resolution as presented by Mr. Pugsley.

The resolution was adopted.

THE PRESIDENT: The motion is adopted by an overwhelming vote. We will now have an address by Mr. J. B. Finley on "Education of Bank Clerks."

**EDUCATION OF BANK CLERKS.—ADDRESS BY J. B FINLEY, PRESIDENT FIFTH
NATIONAL BANK, PITTSBURG, PA.**

The American Institute of Bank Clerks is unique as an educational effort in the industrial world. It is the first concerted attempt, national in scope, made in the United States on the part of a single profession to benefit and uplift by educational methods the standard of efficiency of its employees. Without precedent, much had to be learned from experience. It speaks well for the wisdom and foresight of the founders that two years' practical conduct of affairs has demonstrated that no radical change of plan is necessary.

THE WORK AMONG THE CHAPTERS.

During the past year work among the chapters has been carried on with increasing enthusiasm and with much benefit to the members. Semi-monthly meetings have been held at which papers prepared by the members have been read and discussed and addresses have been made by prominent bankers and public men. Debates have been held by the chapters, and the judges on such occasions have been, in the main, bankers. One of the most interesting features of the chapter work for the past year has been debates between chapters of different cities. These gatherings have been largely attended, not only by members of the chapters taking part in the debates, but by chapter members from other cities. In November of last year a debate was held at Cleveland between Cleveland and Pittsburg chapters, on the question, "Was Secretary Shaw's action judicious in accepting security of other than United States bonds for Government deposit?" This debate was won by the Cleveland Chapter, for the affirmative side. A return debate was held between these two Chapters at Pittsburg, on February 21, 1893, the subject being "Resolved, That State banks and trust companies should be required to keep the same reserves as National banks." There were present on this occasion representatives from the Chicago, Cincinnati, Alexander Hamilton and New York Chapters. The winners this time were the Pittsburg men, who argued in favor of the affirmative side of the question.

The third debate, and the most successful yet held, took place in Cincinnati on May 30, 1903, between representatives from the Chicago, St. Louis and Baltimore Chapters, on one side, and Cleveland, Cincinnati and Pittsburg Chapters on the other. The subject was, "Resolved, That it is for the public good that National banks be permitted to issue currency based on their assets." Cleveland, Cincinnati and Pittsburg, for the negative side, were adjudged the winners.

In addition to formal debates between chapters, discussions have been frequently held between members of the same chapter on practical subjects relating to banking. Such discussions and debates have stimulated the interest of bank clerks in financial and economic questions, and attracted new members to the chapters and correspondingly increased the enthusiasm of the old members. The value of this training to the clerks from an educational point of view can hardly be over-estimated, and the advantage that must accrue to their employees is no less evident. The institute work has been supplemented by social reunions of chapter members, where closer relationship and fraternal spirit have been fostered that must go far toward making the bank clerks realize the all-important fact that the chapters are not a collection of isolated clubs, scattered about the country, but are parts of a homogeneous organization of which the American Bankers' Association is the head.

It is gratifying to note that bank officers and bankers of prominence throughout the country are taking increasing interest in the institute and urging, not only upon their employees, but upon their associates, the importance and value of the work in which it is engaged. There is now scarcely a State Bankers' Association that does not at its convention make commendatory mention of the institute. Chapter officers have been invited to address many of these conventions on chapter and institute work.

In the report of the secretary last year, mention was made of the book, "Industrial Methods in the United States in Relation to Banking and Currency," which members of the Chicago Chapter were engaged in preparing. This work is progressing in a satisfactory way, and there seems to be no doubt that the volume will be completed by December next and in press shortly thereafter. A prominent publishing house has offered to bring out the book. Several chapters are taking steps to procure libraries. St. Louis Chapter has established a library which at

present contains two hundred standard works on financial and economic subjects.

There have been many instructive courses of lectures delivered before the chapters. Notable among them are "History of Banking in America," by Prof. C. Plehn, of the University of California, before the San Francisco Chapter; "Contracts," by Ralph Robinson, attorney at law, before the Baltimore Chapter; "Negotiable Instruments Law," by Thomas B. Paton, before the Alexander Hamilton Chapter, and "Banking Law Talks," by Prof. Leslie Tompkins, of the New York University, before the New York Chapter. Almost every chapter in the institute has enjoyed something of this sort. In addition there have been a number of addresses on various subjects by prominent men. Among those who addressed the chapters within the past year are: Hon. Chas. N. Fowler, of New Jersey, Chairman of the Banking and Currency Committee of the National House of Representatives; Hon. Lyman J. Gage, ex-Secretary of the Treasury; O. P. Austin, Chief of the Bureau of Statistics, Washington, D. C.; Milton E. Alles, ex-Assistant Secretary of the Treasury; Harry Coope, LL.M., of the United States Treasury Department; James W. Sample, Chief of the Department of Issue, United States Treasury; B. E. Walker, General Manager Canadian Bank of Commerce, Toronto, Canada; and Hon. Bird S. Coler, ex-Comptroller, New York city.

To the fact that the chapters emphasize the attainments and accomplishments of their members is due the many promotions that have been made to official position from the ranks of chapters. No better evidence of the practical work of the institute could be found.

The institute now has on its list thirty chapters, twenty-five of them strong and vigorous—two in New York, one in Baltimore, Boston, Brooklyn, Buffalo, Chicago, Cincinnati, Cleveland, Denver, Detroit, Grand Rapids, Hampden county, Mass., Hartford, Kansas City, Los Angeles, Louisville, Milwaukee, Minneapolis, Philadelphia, Pittsburg, Providence, Richmond, St. Louis, St. Paul, Salt Lake City, San Francisco, Toledo, Topeka, Washington.

"The Bulletin" has now over 5,500 paid subscriptions, divided about equally between chapter members and non-chapter members.

"The Bulletin" in its general conduct has adhered closely to the policy laid down by its founders, and the fact that its subscription list has continued to grow is sufficient evidence that the policy is a wise one. "The Bulletin" has won a high place in the estimation of many, as is attested by the large number of highly commendatory letters that have been received. It in no sense pretends to encroach upon the field of the general banking and financial publications of the country. It is first and last a bank clerks' paper, the official organ of the institute. Its object primarily is education and it makes no attempt to gather and print news items, except so far as they refer to the work of the chapters and to the courses of study of the Correspondence School. In its columns preference has been given to addresses and papers prepared and read by chapter members, to special articles by institute men, and to addresses delivered by prominent men before the various chapters. The editorials have been brief and have been carefully restricted to the advancement of the institute work. In its "Among the Chapters" department have been printed news of the various chapters, reports of their debates and discussions, and notices of special work undertaken, etc., with the object of making this department as complete an official report as possible of all that goes on within the chapters.

In the "Collateral Reading" department there has appeared general information of educational interest, not only to students in the correspondence school, but to chapter members and to other subscribers. This has been a popular department. In the "Talks with Students" department has appeared matter relating to the different subjects of study of the correspondence school and of helpful interest to the students in the various courses. Difficulties met with by the students while pursuing their studies are here discussed and the way shown to overcome them. The correspondence department is an important one, for in it are printed, and where possible answered, letters of inquiry from members of the institute relating to their daily work.

"The Bulletin" finds great favor with employees of country banks. Through it they are kept in close touch with their fellows in the larger cities and are made familiar with the practices and methods of city institutions and are thus qualified to render more efficient service to their own banks and to reap the larger rewards that such service commands. The proof of this is contained in such letters as the following:

"I enclose draft to renew my subscription for 'The Bulletin.' It would be impossible for me to get along without it. I think we get more information from 'The Bulletin' for the same money than from any other source I know of. It is certainly a very valuable publication."

"The Bulletin" is also appreciated in the city banks, as is shown by the following letter from the cashier of one of the most important banks in the city of New York:

"I expectantly await its publication and read it with increasing interest from month to month. In my opinion it supplies a long-felt want. Its proper use among the bank clerks of the country cannot but serve to minimize the tendency that is always more or less prevalent among clerical workers to confine themselves to mere machine-like performance of their duties. If your paper did no more than induce men to think, it would be worthy of their support, but it does far more than that, and I must join with its numerous other friends in wishing it long-continued success."

THE CORRESPONDENCE SCHOOL.

The correspondence school is an invaluable department of the institute. The good work it has accomplished is but the beginning of what can be done. The urgent need for such work has been demonstrated. Another year's experience has proved the undeniable truth of the statement contained in the secretary's report of last year, which is as follows:

"The correspondence school of banking does for the country bank what his city cousin gets out of the chapter. The two avenues of improvement and advancement which the institute opens to bank clerks are characterized by the way in which they are employed by the clerks. The young men in towns and villages and the smaller cities of the country take up the correspondence courses of instruction, while their cousins in the larger cities get together in chapter organization and give attention to essay reading, debates, investigations, etc., all more or less in the direction of study, under the auspices of specially-engaged teachers."

The proportion of chapter-member students to the whole number of students is about ten per cent., which supports the statement in the secretary's report that the correspondence school finds greater favor with the bank clerks in localities where chapter membership is not available. The number of students is at this date approximately 800.

In the conduct of the school the general policy as originally outlined has been adhered to. The favorite courses have been those relating directly to the practical operations of banking. Commercial law holds a close second place, and the remaining courses are about evenly distributed.

Experience has shown that it is perhaps advisable to revise the courses by combining those that are logically related. At present there are sixteen courses. Each of these is an independent subject that must be supplemented by one or more of the others to secure the comprehensive training that is necessary for efficiency in any department of bank work. It is this practical desire that animates the majority of the students rather than the desire for scholastic attainment in any one special branch. It would be in the interest of the students, therefore, if some such policy of concentration were carried out. It is feasible. It would better equip the students for the practice of the banking profession and would do so at a smaller expense than under the present policy. The plan proposed for such revision of studies may be found in the printed reports.

It has been demonstrated that bank clerks, especially those outside of the larger cities, are alive to the need of such instruction as the institute affords. Generally speaking, the institute is a success and its influence will in time reach a majority of the bank clerks of the country.

INTEREST IN THE INSTITUTE'S WORK.

The primary object of the American Bankers' Association is "to promote the welfare and usefulness of banks." How can this object be better attained than by maintaining an educational system, through which the bank clerk may acquire a thorough knowledge of the theory of banking? I have endeavored to show you what the association through its committee on education has done and is doing in this direction. The question arises, what, if anything, can be done to create a greater interest in the movement and make it more effective? I suggest for

your consideration a closer alliance or affiliation between this association and the institute. This can be accomplished by providing for the appointment of the board of trustees by the executive council, and for an annual examination in such branches as shall be appointed by the executive council, the passing of which shall entitle the candidate to the certificate of the institute. These are greatly prized and sought after by the bankers and bank clerks of the United States, as are the certificates of the Institute of Bankers in London by the bankers and bank clerks of Great Britain. The value of these examinations is becoming yearly more appreciated, as is shown, not only by the increasing number of candidates, but by the fact that many of the leading banks and bankers of London and the provinces can now give prizes to those of their officials who pass them. It has been said by one of the leading bankers in Chicago: "The benefit of these examinations to the future race of bankers cannot be overestimated. To educate the clerk of to-day, who is to become the manager of to-morrow, is to lay a foundation of a better and more substantial system."

Never in the history of banking in this country were thoroughly trained bankers so greatly needed as at present—men of sound and healthy judgment with which to direct the use of trained faculties and powers. Education, in a broad sense, comprehends all that disciplines and enlightens the understanding, corrects the temper, cultivates the taste and forms the manners and habits.

Special or professional education aims to fit one for the particular vocation or profession in which he is to engage.

While the chief aim of the American Institute of Bank Clerks is the education of bank clerks in the science and practice of banking, its effect will be to broaden and liberalize them, enlarge their views, widen their outlook, quicken their sympathies, beget an increased public spirit, make them more efficient and better qualified to perform the duties of the positions they now occupy, and fit them to fill advanced positions when called upon to do so. What more laudable or profitable work could the American Bankers' Association undertake?

THE PRESIDENT: I now have the honor of introducing to you Hon. Ellis H. Roberts, Treasurer of the United States, who will address us on the Effects of the Inflow of Gold.

**EFFECTS OF THE INFLOW OF GOLD.—ADDRESS OF HON. ELLIS H. ROBERTS,
TREASURER OF THE UNITED STATES.**

The discovery of gold in California lifted the production of the yellow metal in the United States from \$889,000 in 1847, to \$60,000,000 in 1852, and from 1850 to 1860 produced an average of \$55,000,000 a year. The event marks an epoch. In twenty-one of each of the years since our mines have turned out less than \$40,000,000, while in 1902 they gave \$80,000,000. Out of this situation pregnant problems arise which call for thought. What place is more fitting for their study than just here where we stand, where we foregather with the home shepherds of the golden fleece? The American Bankers' Association, representing over fourteen billion dollars of resources, and all the activity of the nation's thrift and enterprise, meets on the Pacific Slope. We have from many points crossed the broad continent to look upon the waters of the new Mediterranean, the ocean of peace. Upon it the scenes are set for the grand drama of the future. The sea which was dominated in turn by the Phoenicians, the Greeks and the Romans was of waters dyed with blood; it is a little inland lake compared with the mighty ocean which connects the Occident with the Orient, which beats upon America and Asia and Australasia, and holds in its lap islands upon which nature has lavished its most precious treasures.

California has learned that there is wealth more precious than gold, because she has used her gold wisely. She clings to actual coin as currency, and has never wavered from fidelity to it as a standard. Under her sky, in her atmosphere, amid her gardens and her ranches, we cannot fail of a true perspective and of a healthful exaltation in our practical discussion.

MAGNITUDE OF THE COUNTRY'S GOLD STOCK.

In the United States at the beginning of this month of October, the gold in the stock of money was \$1,277,362,651; the amount held by the Treasury was \$654,-311,716; and in circulation in coin and certificates, was \$1,016,648,693.

If this association could order this stock brought before it and could get the

metal here in solid mass, we should have a cube of nearly sixteen feet, weighing 2,353.9 tons and requiring 147 freight cars to move it. Were it all coined into eagles and placed edge to edge, the line would be 2,116.84 miles long, say from New York to sixty miles west of Colorado Springs. (See table A at close of address.)

Of the world's production in 1902, amounting to \$290,000,000, the United States furnished \$80,000,000.

In gold in stock, in circulation and in official holdings our country surpasses every other nation. The stock of Great Britain is \$528,000,000, so that ours is double. The increase in five years here has been \$376,021,387. In that period Great Britain has added \$90,000,000; France, \$137,700,000; Germany, \$95,000,000; Austria-Hungary, \$55,300,000, while Russia lost \$10,400,000, and in several other countries there has been a reduction. In all of Europe the total gain in the same interval has been \$449,600,000, from which is to be deducted the falling off in several nations of \$26,000,000, and thus a net increase is shown of \$423,600,000. (See table B at close of address.) At the present rate our gain before this calendar year ends, in stock of the yellow metal, will exceed that of all European countries. Remember also that their population is five times that of the United States.

Let us concede that some excess crept into the estimates of earlier years in our stock, and has been carried forward; but the methods of calculation in France and Russia render it certain that like excess in greater degree exists in their records. The ratio is therefore practically accurate.

An interesting comparison is that by persons. Our stock of gold is \$15.80 per capita; that of France is stated at \$24.36; of Germany, \$13.54; of Austria-Hungary, \$6.01; of Russia, \$5.70; of Switzerland, \$9.06; of Sweden, \$3.42; of Norway, \$3.73. (See table C at close of address.)

With greater assurance and accuracy, we can consider and contrast the holdings of the Treasury of the United States and of the foreign central banks. Let us take two dates five years apart and look at the totals and the changes in the interval, September, 1898 and 1903. The Bank of England in that period lost in gold, \$2,264,000; the Imperial German Bank, \$38,683,809, and Russia \$132,240,000, while gains are reported in the Bank of France of \$127,640,000; of Austria-Hungary, \$79,120,000. The aggregate gains in all the European States were \$261,867,000, and the losses \$181,571,000. Thus the net gains in official holdings in those States for five years were \$80,000,000, and were equal to that of one year of our Treasury. (See table D at end of address.)

The banks, National and other, own \$322,000,000. Our Treasury holds now \$655,000,000. A fair comparison with foreign official holdings permits us to combine these sums, and to reach as the treasure on which our financial system is based \$977,000,000, hard on to a billion dollars. The public and private credit of the British Empire rests on \$166,856,000 in the Bank of England; of Germany on \$170,371,000 in the Imperial German Bank; of Russia on \$404,396,000 in the Imperial Bank; of France on \$494,506,000 in the Bank of France. Exclude the gold of the banks; our Treasury alone holds 3.9 times more than the Bank of England; 3.8 times than the Imperial German Bank, nearly three times more than Austria-Hungary; 62.1 per cent. more than Russia, and 32.6 per cent. more than France.

EFFECT OF THE LARGE SUPPLY OF GOLD.

This plethora of the precious metal in our country presents three problems interesting and important. What is to be the effect on our currency? What on prices and wages? What on our world relations?

Paths may be opened for our investigation if we look back to the decade following the discovery of gold in California and study the conditions from 1850 to 1860. In that period our country produced gold of the coinage value of \$550,000,000, an average of \$55,000,000 a year. (See table D at close of address.) With population ranging from 23,000,000 to 31,000,000, activity marked all branches of industry. In the census years the value of manufactures produced ran up from \$1,019,106,616, to \$1,885,861,676—an increase in ten years of \$766,755,060. In the decade our national wealth increased by \$9,023,836,000. Imports of merchandise grew from \$173,509,526 to \$353,616,119, more than double; from \$7.48 per capita to \$11.25; and exports from \$144,375,726 to \$333,576,057, again more than double, and from \$6.23 to \$10.61 per capita. The money in circulation increased from \$330,256,605 to \$435,407,252, and from \$12.02 per capita to \$13.85. Of this, bank notes were, in 1850, \$131,366,520 and in 1860, \$207,102,477, and specie at the two periods, \$154,000,000 and \$235,000,000. Prices of food and clothing advanced, and up to 1855 a general increase occurred of eleven per cent., but in the sum of

articles chosen for index there was a fall of 2.3 per cent. before 1860. Pig iron, a typical product, went from \$20.88 in 1850 to \$22.75 in 1860. In Great Britain from the decade 1848-1857 to 1858-1867 there was an advance in index prices from eighty-nine to ninety-nine. The panic of 1857 befell in that decade. Howell Cobb, Secretary of the Treasury, pronounced "the undue expansion of credit, which engendered schemes of improvident speculation, leading to rapid fluctuations in prices and habits of extravagance, the principal cause for the embarrassments in the commerce of the country." Others vehemently attributed the disastrous revulsion to the change in the tariff made by the act of March 3, 1857, reducing rates by twenty per cent. Looking back the student may ask, was not the shadow of the Civil War a contributing cause? It is certain that all branches of business were prostrated and that the distress was wide and intense. The banks suspended, but the Government kept on paying coin. While paralysis fell upon enterprise, the country was not exhausted as in the panic of 1837. Industry and commerce had been rushing on too fast, and the brakes worked suddenly with a severe shock.

STABILITY OF OUR CURRENCY SYSTEM.

To-day the contrasts with that period are many more than the parallels. No sectional strife disturbs the national serenity. Our huge railroad system binds all States together, and connects ocean with ocean and the gulf with the great lakes. Our industries are more varied and so have a broader base. Enterprise takes more extensive range. They cannot be so easily toppled over. From 1890 to 1900, the annual product of our manufactures grew from \$9,372,437,283 to \$13,039,276,566. Our imports of merchandise ran up from \$789,310,409 to \$849,941,184, and our exports from \$857,828,684 to \$1,394,483,082. We are 82,000,000, with so many electric brains and hearts beating to many rhythms and with chameleon desires. To such, general and sudden change does not come so readily as to a smaller population with simpler methods and with narrower experience. The severest cyclone cannot cover a continent, but has a short and narrow path.

Our currency rests absolutely solid on its rock bottom of gold. Some ghost-seeing Macbeth may discern weird sisters on the blasted heath, casting their incantations together, with the refrain:

"Double, double, toil and trouble,
Fire burn and cauldron bubble."

He may dread the rush of United States notes for redemption, may suspect that some Secretary of the Treasury will use silver for official payments, may tremble at the hazard of wild legislation. He forgets that \$260,000,000 of the United States notes are of denominations of \$10 and below. How can they be gathered in any large volume? The silver dollars are scattered everywhere, while the silver certificates are all but \$27,000,000 in \$10s and below. The people need all small notes and clamor for more. They are beyond reach by any Secretary for large payments. The power of Congress is vast, but it cannot climb Niagara, nor can it overcome the majestic force of this yellow flood of \$80,000,000 a year.

Some critics complain that gold is not a cheap currency. That is true, and it is its merit; it is secure beyond doubt. Cheap currency may be devised, if that is wanted, but it will have all the qualities of cheapness; it will be weak, unstable, dubious. Gold is worth all it costs. It goes masterfully everywhere. It stands sure and steadfast itself, and all allied to it takes on its strength and power. Our yellow metal passes in St. Petersburg and Peking, in Hongkong and Tokio, and the United States note and silver certificate march with it in equal favor. The American people were urged to make fiat money, because it was cheap, and to coin silver at sixteen to one, because it was cheap. They rose above the temptation and declared not once but twice and always that they want not cheap money, but the best in the world. And they have it, and the annual inflow of \$80,000,000 assures it to them and rewards their wisdom.

Possible peril lies on another side. Our circulation is undergoing an immense and continuous inflation. In five years, the money in circulation in this country has run up from \$1,816,516,392 to \$2,404,617,069, an increase of \$588,020,677. The strength is that of this growth \$358,604,872 has been in gold, coin and certificates, an annual addition in that form of nearly \$72,000,000. We are to confront a further increase in our circulation, of which gold will constitute not far from \$80,000,000 a year. That precious metal, including the certificates standing for it, is now 42.27 of the total, and its share advances steadily.

Since October 1, 1898, the circulation for each person in the United States has

run up from \$24.24 to \$29.75 and the part of gold in it from \$8.78 to \$12.57. While nowhere else are checks and drafts and like instruments used to the same extent as with us, no other country has so much money per capita in circulation save France, which claims \$39.22, where checks are much less used than here. Great Britain has \$18.29, and Germany \$20.48; Canada, \$14.39; Russia has only \$6.50. (See table C at the end of the address.) Differing from notes of National banks, gold is money of final reserve and redemption, and the credit built upon it is higher and broader, so that the potential inflation may be carried further.

In this country, cash is used for only ten per cent. of transactions; in some localities for less; in others for perhaps fifteen per cent. Cries for more money have been often heard in the land; no one has said how much. The due limit for circulation has not been established. Alexander Hamilton quotes Postlethwaite as supposing that the quantity of cash necessary is one-third of the rents to the proprietors, or one-ninth of the product of the lands. This really only names other unfixed quantities as the standard. We have passed far beyond such limit. The theory has been proclaimed that the circulating medium should keep exact pace with the population. Conditions vary in different countries and at different periods. In the same land at periods not remote from each other, large additions to the currency cannot fail to affect enterprise, industry and commerce, the cost of living and the price of commodities. But the currency is only one factor bearing on production and consumption. We shall err radically if we treat it as the absolute dictator.

THE INFLATION IN PRICES.

With due allowance, then, for contrary influences, how far and in what direction is the vast inflow of the yellow metal carrying us? The blind may see that in the past five years business has been expanded in some directions in an unparalleled degree. Credit has naturally been multiplied at least to four times the amount of cash added to our supply. The exploitation of gigantic industrial corporations ran on at a dangerous speed, fortunately to exhaust itself by its own excesses. Promotion of stocks and bonds is not industry; it is speculation, and that finds help and impetus in inflation. In that way the inflow of gold has magnified if not wholly caused the frenzy and the excesses in industrial securities. Those who have climbed too high into the realm of credit must come down, and here the descent, unlike that to Avernus, is not smooth and pleasant. The promoter who has failed to distribute his stocks and bonds may be punished, and those who have petted his schemes may suffer. But a shrinking of inflated securities to their new value is not a public calamity. Individuals may be crippled, industry and enterprise may have to rest on their oars. Our financial system cannot totter, much less be wrecked. Undue favors may have been shown by some banks to promoters, but they are correcting their blunders and looking out for more healthful business.

Prices of commodities have undoubtedly been borne upward by the inflation. Special influences have affected iron; Bessemer pig, which was \$10.25 in August, 1898, cost \$21.75 at the same time in 1903; steel billets in the same interval have risen from \$14.75 to \$34; No. 2 red winter wheat, which was seventy-four, became 74½; mess pork from \$9.75 jumped to \$18.25, and family beef from \$11.50 to \$15; cotton from 5 11-16 advanced to 8 9-16; Ohio fleece wool fell from twenty-eight to twenty-seven.

By index numbers, the advance of all commodities has been from \$76,808 to \$97,891, or twenty-one points. On full examination, the Employers' Association of Chicago finds that the cost of living in this country has increased fifteen per cent. in five years. Carroll D. Wright, head of the Bureau of Labor, with all the data of the Anthracite Coal Commission, declares the advance to be from fifteen to seventeen per cent. These figures may be accepted as authoritative.

Advance in wages follows increase in cost of living. In recent years it has come fast and strong. Large railway companies and other corporations have added fifteen per cent. at one step to wages paid, to meet the recognized advance in cost of living. The drift had been downward in wages from 1893 to 1898; since it has been steadily upward. In many cases it has exceeded the rise in cost of living. The general average may safely be stated at from fifteen to twenty per cent. Persons with fixed incomes are burdened with the heavier cost of living without any offset, as they have the benefit of a fall in prices of commodities, when that occurs.

When wages go up, the purchasing power of those who earn them rises in

equal measure. This process affects prices of commodities, and adds always to the consumption which again gives impetus to production and trade.

No one can deny that the golden inflow contributes to the currency a share growing more rapidly than the total circulation, all at parity; that it lifts prices and wages, incites activity in industry and trade, and pushes enterprise forward, while it also tempts to undue inflation of commercial and stock-jobbing credit.

How do these influences bear upon our world relations? First of all, our surpassing wealth in gold has placed our national credit on a plane above that of all other countries, and never before held by that of any government. British consols bearing $2\frac{1}{2}$ per cent. interest, long the foremost type of credit, have recently sold below eighty-seven, while consols of the United States bearing only two per cent. range from 108 to 110, and the loan of 1925 commands 136. This American Republic alone among nations always in time of peace reduces its debt, and after a war makes rapid payment of the cost. Only unbridled folly, not conceivable, can shake this solid structure.

Obviously the supremacy of our national credit adds to the strength of the republic in commercial credit, general esteem and international influence in all the world. We fear no evil from exports of gold, for we can well spare more than Europe can pay for in American obligations, in merchandise or in any form of securities.

The productiveness of Europe justifies this rank. In manufactures the American people are far and away beyond rivalry. Against our thirteen billion dollars of annual product, Great Britain shows \$4,263,000,000, France \$2,900,000,000, Germany \$3,357,000,000, and Austria-Hungary \$1,596,000,000. These four great nations turn out in manufactures \$12,116,000,000 a year, or a billion dollars less than does this country alone.

The scale of living in the United States is such that we consume a great deal of what we make. We spend more than the same number of people anywhere on earth. Our agriculture helps to feed Europe, indeed many of its inhabitants would starve without our grains and meats. How much of the products of the farm shall be exported depends on the crops in all lands and on the purchasing power of our foreign customers.

INVASION OF THE WORLD'S MARKETS BY AMERICAN MANUFACTURERS.

But we invade the old world with our manufactures by reason of the skill and energy of American labor and the methods devised by American genius. We run electric roads beside the Pyramids; we furnish harvesters for Russia; we build bridges in the Soudan and in Burmah; send locomotives to farthest Manchuria, help Germany to load coal, sell shoes to Austria, scatter sewing-machines everywhere, and our watches keep time on the Danube, the Nile and the Orinoco. Our high wages have not yet checked our invasion of the markets of Europe and Asia. Increasing home consumption affects to some degree the exports of our merchandise, for we ship only what our own people do not use, but the more we make the more we shall sell.

The exports of our manufactures for the eight months ending with last August were \$278,519,872, and 32.4 per cent. of our total exports; for the like period of the preceding year they were \$279,532,992 and 34.79 per cent. of all. In the fiscal year 1903 they were \$408,187,207 and 29.32 per cent. of all, while in 1902 they were \$403,641,401, and 29.77 per cent. of the total exports.

Note now a remarkable contrast. Mr. Chamberlain, in opening his era-making crusade for his new fiscal policy at Glasgow, October 6, showed the trend in British exports of manufactured articles. He must have startled his hearers by declaring that since 1872 the export trade of Great Britain has increased only $7\frac{1}{2}$ per cent., while her population has grown thirty per cent. Still more: to the United States and Europe—"protected countries," he calls them—the export of manufactured articles has fallen from a hundred and sixteen million pounds sterling in 1872 to seventy-three and a half million pounds in 1902; that is, from \$564,000,000 to \$355,000,000, a loss of over \$200,000,099. Evidently the United States and not Great Britain has become the workshop, not only of Europe, but of the world.

Upon the marvelous golden inflow, American mechanism moves in triumph. Our agriculture is still dominant in our wheat and meats and fruit and cotton. The remarkable growth in our manufactures, now constituting nearly a third of our exports, further demonstrate how firm and rock-ribbed are our material and financial conditions. Predictions can prudently be based upon them. But the minds

of men are a shoreless and chartless sea, and no one can tell when or why pallid fear may brood horribly upon its waves. The nerves of the multitude are a vast electric system which some accident may start into sparks or even flame and shock and far-reaching utterances. Into this mystic region our theme does not lead us, even if we had the courage to enter there. We have been studying what can be weighed and measured, a stream whose course and force can be quite clearly mapped.

This golden flood is without peer in its magnitude. It has brought to our people and our Government treasures richer than any before recorded in human annals. It has covered the continent and blessed all the inhabitants. Its sources and its current are not exhausted. It continues to spread itself over every valley and plain, fructifying as the waters of the Nile. Bankers may do much to direct it into right and beneficent channels. They can prevent its diversion for sinister and harmful purposes. The strippings of the surface of the mines have been brought to us. Riches from lower levels are within sight. If the American people are prudent, will let their common sense and cold reason govern, they shall see that the prosperity they enjoy is the earnest of more to come, of material achievement beyond the scope of prophecy, deserving to be adorned with moral and spiritual flower and fruit which shall glorify humanity.

Table A.—Space Occupied by Our Stock of Gold and Weight.

One cubic foot of standard gold is worth \$326,340.

\$1,000 of new gold coin weighs 53.75 Troy ounces.

The diameter of the eagle (\$10 piece) is 21-20 of an inch.

The stock of gold is estimated at \$1,277,362,661 (October 1, 1908), and if no allowance be made for abrasion, will weigh 2,853.9 tons (Avoirdupois weight).

Reduced to a solid mass, it would contain 3,364.2 cubic feet, and would fill a vault that measured 15.785 feet on all sides.

If coined into eagles, and placed edge to edge, it would make a line 2,116.84 miles long.

If placed on board freight cars, with sixteen tons to each car, it would require 147 cars.

With an estimated population of 80,881,000, this stock of gold gives a per capita of \$15.80.

Table B.—Stock of Gold in Various Countries, as Shown by Latest Available Returns.

COUNTRY.	Jan. 1, 1898.	Jan. 1, 1903.	Increase for five years.	Annual average.
Great Britain.....	\$438,000,000	\$528,000,000	\$90,000,000	\$18,000,000

COL. ROBERT J. LOWRY, of Atlanta, Ga.: Mr. President, just a few moments on the line of our educational committee work.

The "United States Investor," published in Boston, offered a series of prizes, one thousand dollars in all, for suggestions for bank officers and bank clerks, the prizes to be divided as follows: \$500 for the best suggestion; \$300 for the second, and \$200 for the third. A committee of gentlemen was appointed to read these propositions, and I am glad to report that there were some two hundred and over received by the "Investor" Company. They were thoroughly read and considered by a committee of bankers and others, and they arrived at the conclusion that the awards ought to be as follows. I take this occasion to say that the liberality shown by this publisher is along the line of the work being done by the American Bank Institute of Bank Clerks. It was open, not only to the clerks of the banks, but any one, and after thoroughly considering all the propositions, which are now published in book form, they have now arrived at this conclusion, and I hold certified checks

of the American National Bank, of Boston, for those to whom the awards are made.

I hold a clipping showing the terms under which the prizes were offered. I will not take up the time to read this. Also here is a clipping from the "Investor" saying that so many essays were received. The names of the judges are contained in the circular, and we have just received a telegram from Mr. Odell, the chairman of the committee having it in charge, awarding the first prize of \$500 to F. M. Farwell, No. 1 Nassau street, New York City, for Essay No. 105, entitled "Combining Small Banks," which you will find in the volume sent by express, as I am informed.

The second prize, \$300, goes to Lancy Thomas, whose address was P. O. box 855, Denver, Colo. His essay was No. 94 in the volume, and it was entitled "Bank Collections."

The third prize, \$200, is awarded to Richard C. W. Merrington, whose address is 59 William street, New York city. His essay was No. 150 and the title was "Bank Clerk's Holidays." (Reading):

I enclose herewith certified check for these amounts, and if there is any change in their addresses, I will advise you later.

It is a great pleasure to us to stimulate this competition, and we are under obligation to you and the other judges.

With kind regards, I am, Yours, etc., FRANK C. BENNETT.

That is the "United States Investor."

I think it is well enough, when gentlemen take so much interest in our welfare to offer these rewards, that they should have public mention of it made in our association, and I think that if we could have more of this it would add a great deal to the work which we are doing. These checks will be forwarded to the gentlemen named.

JOHN J. WHITE, Second National Bank, Atlantic City, N. J.: Mr. President, I would like to read a communication from the State Bankers' Association of New Jersey, inviting the association to meet at Atlantic City in 1904.

Jersey City, October 13, 1903.

Mr. James R. Branch, Secretary American Bankers' Association, San Francisco, Cal.

My dear Mr. Branch: The Atlantic sends greeting to the Pacific.

The New Jersey State Bankers' Association extends a most cordial greeting to the American Bankers' Association in convention assembled, and congratulates them upon the hospitality they are sure to receive in the great State of California.

Before that memory becomes a pleasant memory, our association cordially invites you to make our State the scene of next year's convention. Atlantic City, whose attractions and whose hospitality are world-wide, will be pleased to open her doors and her heart for this purpose. We heartily commend her charms to your consideration, and earnestly hope that we will have the privilege of welcoming to our State in 1904.

Very sincerely yours,

E. C. STOKES, President.

Attached is also the following letter from Mr. Franklin Murphy, Governor of New Jersey:

James R. Branch, Esq., Secretary American Bankers' Association, San Francisco, Cal.

Dear Sir: I am informed by some friends from Atlantic City that you are to be invited to hold your next annual meeting at Atlantic City.

I am very glad to add my own request to that of the representative citizens of that place, that you should accept their invitation. The city, as you know, has many attractions, not the least of which are its excellent hotels and the public spirit of its citizens. I am sure that the people would be very much pleased if your association should decide to visit them next year.

I extend also the invitation of the board of trade of Atlantic City, and the city council.

Very truly yours,

FRANKLIN MURPHY.

THE PRESIDENT: The invitation just presented will be received and filed with the executive council, who will pass upon the question.

LEWIS E. PIERSON, of New York: Mr. President, the New York bankers have for many years partaken of the generous hospitalities of other cities, and as next year's place of meeting for this association will no doubt be somewhat considered from a geographical standpoint, we feel that an opportunity should be given at that time for us to attempt to repay the many courtesies we have received in the past.

On behalf of the New York Clearing-House, as well as our group of the State Bankers' Association, I therefore, Mr. President, have been requested to extend to the members of the American Bankers' Association a most hearty and cordial invitation to hold their next year's convention in our city.

THE PRESIDENT: The invitation will be received and filed and will come up for consideration by the executive council.

E. F. SWINNEY: I wish to ask the incoming members of the executive council to meet immediately after adjournment in the press-room of the Palace Hotel.

A. H. WIGGIN, Vice-President National Park Bank, New York: I rise to offer a resolution of thanks. As an Eastern banker I much appreciate this opportunity. Never have we had a more successful convention, never have we had a more cordial reception, or more generous hospitality. We are deeply indebted to the city of San Francisco and its people, and especially to its bankers. At this time I want also to express thanks to the press for their uniform courtesy and consideration, and also to the telephone and telegraph companies. I offer this as a resolution.

The resolution was seconded and unalmsously adopted.

F. D. MONFORT, Vice-President Second National Bank, St. Paul, Minn.: Mr. President, if it is in order I would like to move that the thanks of the convention be tendered to Mr. Ellis H. Roberts, for his very masterly and eloquent address.

The motion was seconded and unanimously adopted.

THE PRESIDENT: The next business in order is the report of the Committee on Nominations.

J. J. SULLIVAN, President Central National Bank, Cleveland, Ohio: Mr. President, the committee makes the following report, and desires to present for your approval the following list of officers for the ensuing year:

(A complete list of the new officers appears at the end of this report.)

THE PRESIDENT: Mr. Bigelow, your familiarity with the affairs of the American Bankers' Association and the important interests they represent makes it unnecessary for me to say anything as to the honor which has been conferred upon you. You will appreciate it without my saying anything further. It affords me the greatest pleasure to throw upon your worthy shoulders the mantle of office, and I therefore take pleasure in presenting you with the President's badge of office.

F. G. BIGELOW: Mr. Hardy, Gentlemen of the Association, Ladies and Gentlemen—It is difficult for me to find words to express how thankful I am for the honor that you have given me to-day. Not only that, and what it implies of work and effort, but the way in which it has been done, the kindness with which I have always been received by you, in the council and

in the convention, would tend to touch any man's heart. To be chosen for president of this association in the city of San Francisco is another touch that we cannot all have—a city that has, it seems to me, gone beyond any possible expectations in the reality, in the unreserved hospitality and cordiality with which we have been received. I think the way they have conquered us shows only the way they are going to conquer the whole Pacific Ocean.

I want to call your attention to one or two things in regard to the business of the association. The dues have been doubled in some instances, and largely increased in others, and I want now to ask all the members that are here to bear that message to other banks not represented, and to urge upon the banks that they should be very glad that this is done, under all the circumstances. The circumstances will be set forth fully, as time goes on. But I think it is well to say a word about it. The cost of the protective committee has been all that the smaller banks have paid in dues to the association, and they are only asked now to pay in dues over and above that amount what they were before.

I think it is right to congratulate the association on the papers that we have had presented here this year, which I think are more thoughtful than usual, and upon the work of the association, upon its currency report, which is all that is to be accomplished, under the circumstances.

It was as good a man as Charles Reade who said, "When you don't know what to do, don't do it."

Mr. Hardy, it is my pleasure, too, though I have had poor success with buttons, having forgotten the vice-president's button a year ago, to present you with this button, that is to be fixed on you. You remember, probably, that ex-Senator Evarts said, I think, that the X's go before the Y's.

THE PRESIDENT (MR. HARDY): Mr. Swinney will please step forward and receive the sentence of the court.

Mr. Swinney, some very brainy man has said that a fellow ought not to expect to have hair and brains too. If that be so, there can be no doubt as to which you have. I have been trying, myself, to travel in the class with Joe Hendrix and Walker Hill, but I will have to step down and yield the palm to you.

The members of the American Bankers' Association appreciate your arduous duties as chairman of the council and what you have done for it, and, anxious that you shall not overtax yourself for the coming year, we have promoted you to the innocuous desuetude of the vice-presidency, and I have, therefore, the pleasure of inducting you into that office.

I did intend to say a word or two about the pins, if it had not been for the words the new president has just uttered. You remember the trouble you got into in getting the chairman to serve last year. I think he has caught the vice-president's pin. The secretary has anticipated next year by having one for 1903 prepared, which the president will receive at the expiration of his term. I am going to present you with that pin, and advise you to hold on to it until you get the vice-presidential pin.

MR. SWINNEY: My friends, it is said that all things come to him who waits. As Mr. Hardy says, the duties of this office are not at all arduous. That is just the place I have been hunting for, and I want to say to you, briefly, that I thank you more than I can tell you for the honor which you have conferred upon me.

THE PRESIDENT (MR. HARDY): Mr. Bigelow, I retire in your favor.

COL. LOWRY: Just one moment, before you retire.

Members of the American Bankers' Association, Ladies and Gentlemen—I do not know why they should have selected me to present a souvenir to the outgoing president, unless it is because I am one of the "has-beens," the only one who is here. You are about to become a "has-been," and in recognition of the arduous duties which have fallen upon the shoulders of our retiring president, the association has prepared a lovely present, typical of people who come from Virginia, and has asked me to present it to you. (Presenting Mr. Hardy with a silver punch-bowl.)

It has been my pleasure to know Mr. Hardy for a great many years, and I have always known him to be a thorough man, a gentlemen among Virginia gentlemen, a good officer and a lover of this association. He has been at all of the association functions that I have been at, and there has been a good many of them, and he has held his end up at the banquet-board and the punch-bowl, and everywhere else. I can tell you that when the interests of this association have needed his services in any way, he has given them freely. He has been a great help in building up this association to the point it has reached now. I will not take up any more time, gentlemen, because I know that many of you want to get around to the many beautiful places in this dream of a country. Therefore, I present this punch-bowl without any further words, and I invite you, in the name of Mr. Hardy, if you ever land anywhere around Norfolk, Virginia, to come in and quench your thirst from it. Everybody knows Mr. Hardy in Virginia; he keeps open house, and this bowl will always be filled with champagne whenever any of you come to see him. Mr. Hardy, I present this to you in the name of the American Bankers' Association with the love and respect they have for you.

CALDWELL HARDY: Members of the American Bankers' Association, Ladies and Gentlemen—It appears to become the practice of this dignified association to annually fill its president too full for utterance. Whether we believe half of the stories of California that we have heard since we have been here or not, we have certainly learned from the royal hospitality that has been dispensed to us that we have only to press the button and call for what we want, and, presto, we have it. If I had had any intuition that I was going to be presented with anything of this sort—of course, I had not any idea of it at all—I should have brought into use the pipe-line from one of these beautiful vineyards on the hills around here, and have connected that pipe-line from the vineyard to our meeting-place, and have invited everybody to join me.

I might add something as to the work of our association and the interest I feel in it, but it is growing late, time is pressing, and I hope the results speak for themselves. What more can I do than to thank you heartily for the many courtesies and kindnesses that I have received from your hands, which I do with all my heart?

THE PRESIDENT (MR. BIGELOW): Gentlemen, I believe there is no further business to be brought before the convention.

A DELEGATE: Has there been a resolution thanking the bankers of California?

THE PRESIDENT: There has been. We have here a telegram from the Chairman of the New Orleans Levee Executive Committee, inviting the delegates of this association to send delegates to the levee convention which meets in New Orleans, October 27. This is signed by Mr. J. N. Luce, Chairman of the New Orleans Levee Convention. There is no further business before the convention, and I therefore declare the twenty-ninth annual meeting of the American Bankers' Association adjourned.

OFFICERS OF THE ASSOCIATION.

PRESIDENT.

FRANK G. BIGELOW, President First National Bank, Milwaukee, Wis.

FIRST VICE-PRESIDENT.

E. F. SWINNEY, President First National Bank, Kansas City, Mo.

TRUST COMPANY SECTION.

The Trust Company Section met at ten o'clock A. M., October 20, in the California Theater, E. A. Potter, chairman of the executive committee, presiding.

THE CHAIRMAN: Gentlemen, I regret exceedingly that our chairman is not present. In his absence I will do the best I can.

It is evident that our numbers here this morning are hardly commensurate with the capacity of this room, and I would suggest that the gentlemen in the rear come forward. If they do so, they may be able to hear a little better.

The first business is roll call by the secretary. As this is rather a tedious proceeding, and as it has usually been dispensed with, I will ask what is the pleasure of the meeting in regard to the roll call?

Upon motion, the roll call was dispensed with.

ADDRESS OF WELCOME BY F. J. SYMMES, PRESIDENT CENTRAL TRUST COMPANY OF SAN FRANCISCO.

Mr. Chairman, and Gentlemen of the Trust Company Section of the American Bankers' Association—To me has been assigned for a few brief moments the pleasurable duty of extending to you a greeting from the trust companies of California, and from the citizens of San Francisco.

You find us here as a city fairly started in a career of great promise. But cities are not built in a day, or in fifty years. It is nearly two thousand years since the Romans first established their camp upon the bank of the Thames and started the foundation of the great city which has become the metropolis of the British Empire, and it is 240 years since New York first took over the little village of New Amsterdam and started upon her metropolitan career. San Francisco has had scarcely fifty years since she first took herself seriously and realized that she was to become a city of importance in the world. Her early life was a rugged and strenuous existence and for a few years the city consisted of a few shacks and tents upon the beach by the side of this beautiful bay, simply an abiding place for men who came from all parts of the world seeking, not San Francisco, but the nuggets and gold dust found in the hills beyond. San Francisco was a stopping place, a place to buy their picks and shovels, their pots and pans, and a place where they might stop on their return and gamble away a little of the dust which they had secured in the mountains.

It was twelve or fifteen years before we had more than one mail a month, and that going out through the Golden Gate, down around the Isthmus of Panama and to New York. It was not until 1858 or 1859 that we obtained the pony express, which gave us an opportunity to send a half ounce letter for five dollars across the continent. A little later the great railroad was established, and in 1869 we looked forward to a sudden development of the country. But the railroad interests were not purely and entirely in the interests of the country, and for many years their interests were rather to restrain our growth than to stimulate it, and, we may say, it has been only within the past very few years that the railroads have realized the importance of the development of the country itself, and that we have had what might be called a fair chance for the development of the city and the State. That time has come, the future of San Francisco is assured. It must be evident to you, as to all who visit us, that the opportunities of the future are remarkable. And while we have in the State a million and a half of people, and 135,000 square miles, only about ten inhabitants to the square mile, the opportunity is presented to us for that enormous development which has come to the Eastern States and to other countries with far less natural opportunities and attractions than we have here, and it is safe to say that the development here will be enormous in the future; and when the time comes that we shall have, as we shall naturally have, the inhabitants, not ten to the square mile, but one hundred or one hundred and fifty to the square mile, as you have in the Eastern States, San Francisco will be a city of five millions or six millions, and the State a State of twenty-five millions or thirty millions.

In the names of the trust companies of California, the citizens of the State, and the citizens of San Francisco, I extend to you a hearty greeting. We welcome you now for the day

or week, and we shall welcome you again, as we have yet to learn of those who have visited us who have not been anxious to come again.

REPLY OF E. A. POTTER, PRESIDENT AMERICAN TRUST AND SECURITY COMPANY,
CHICAGO.

In the absence of our distinguished chairman, Mr. Borne, of New York, it becomes my privilege to respond to the cordial welcome which you have so gracefully extended to the American Bankers' Association.

The name "California" is synonymous with all that is broad and generous. Our journey here has shown us that your State is both long and broad, and we have already experienced the generosity of the hospitality of your city.

But how could it be otherwise, living as you do in a climate where the sun always shines; on a soil abounding in all the rich and good things of the earth; with your river beds and mountains filled with gold, your valleys and hillsides yielding crops of grain and fruits unequalled in other portions of the earth; with a harbor not only of surpassing beauty, but of capacity sufficient to bear upon its bosom at one time the combined navies of all the nations of the globe? With your wonderful Yosemite, big trees, hot springs, roses in winter and snows in the mountains in summer, your State has become the Mecca toward which the tide of travel from the East turns yearly with ever-increasing volume.

Standing guard at the western gateway of this great and prosperous nation, the commerce with the Orient largely in your control, surely San Francisco is blessed above her sister cities with riches that are, and still more that are to come.

Your people are cosmopolitan, composed of the most enterprising from all lands—hence, broad-minded and liberal.

We accept your welcome, and thank you for it with the same sincerity with which it is tendered. We are glad to be with you, knowing that we will learn much from you and of you, and that when our visit is over we will leave with the knowledge that your hospitality is as boundless as are the resources of your magnificent State.

THE CHAIRMAN: The next business in order will be the reading of the report of the secretary.

REPORT OF THE SECRETARY.

To the Members of the Trust Company Section:

September 1, 1902—

Balance.....	\$2,795.09
Received from sale of trust company forms.....	208.08
	<hr/>
	\$3,003.17
Expenses meeting of the executive committee New York.....	\$144.00
Buttons for New Orleans convention.....	40.00
Proceedings, 1903.....	236.12
200 programmes.....	10.00
Reporting New Orleans convention....	25.00
By draft Beacon Trust Co., Boston, Mass., returned.....	12.00
Other disbursements.....	25.83
	<hr/>
	483.23
Balance.....	<hr/>
	\$2,519.92

September 1, 1902, there were 414 members in the Trust Company Section, sixteen of these have withdrawn since that date; but as 103 members have been added to our rolls, the net gain is eighty-seven, making a total membership of 501, an increase of twenty-one per cent.

New York, Oct. 1, 1903.

Respectfully submitted,

JAMES R. BRANCH, *Secretary*.

Upon motion, the report of the secretary was accepted and filed.

THE CHAIRMAN: The next business in order is the report of the executive committee, which devolves upon me.

REPORT OF THE EXECUTIVE COMMITTEE.

To the Trust Company Section of the American Bankers' Association—Your committee note with pleasure the growth in interest in this section of the American Bankers' Association as evidenced by the steady increase in membership, which at present numbers about 500, as against 114 in 1897. While the trust company is essentially an American institution, no similar organization existing in other coun-

tries. It is manifest that trust companies have become permanent and very important factors in the financial affairs of the United States. Their aggregate capital amounts to nearly \$200,000,000, and their combined deposits to more than \$1,500,000,000. That it is wise for officials of companies having in their charge such vast sums of money to maintain an organization or association and meet together at least yearly, needs no argument.

There is now hardly any important corporate enterprise undertaken that the services of a trust company are not enlisted, and in the older cities the trust companies are charged with the administration of estates, the responsibility of which is far greater and more sacred than any other that can be undertaken in a business capacity. The opportunity to meet together and compare notes as to methods in vogue in different sections of the country in the conduct of this very important business, and the influence that combined effort can exert in bringing about uniform laws in the various States, can be made of incalculable benefit, and your committee express the hope that each member here present will leave this meeting with renewed zeal and a determination to interest others actively in the work.

Respectfully submitted,

EDWIN A. POTTER,

Chairman Executive Committee.

Upon motion, the report of the executive committee was adopted.

THE CHAIRMAN: The next thing in order is the paper on Escrows by Mr. Philip S. Babcock, Trust Officer of the Colonial Trust Company, of New York City.

**ESCROWS: A VARIED AND PROFITABLE FEATURE OF TRUST COMPANY BUSINESS.—
ADDRESS OF PHILIP S. BABCOCK, TRUST OFFICER COLONIAL
TRUST COMPANY, NEW YORK CITY.**

The dictionary defines an escrow as: "An instrument under seal, placed in the hands of a third person for delivery to the grantee on some condition, the instrument being of no effect until delivery." Black's Law Dictionary enlarges this definition by stating: "A grant may be deposited by the grantor with a third person, to be delivered on the performance of a condition, and on delivery by the depository it will take effect. While in the possession of a third person and subject to condition, it is called an 'escrow.'"

This definition and explanation cover the strict legal use of the word, but it is commonly the practice in trust company work to carry under this head various forms of business which, perhaps, do not conform absolutely with this strict legal definition, and yet which justify my sub-title and are properly within the scope of trust company functions.

The simple form of escrow, and perhaps the most common, is the one of our definition: A, the grantor, sells to B, the grantee, certain property, real estate, securities, or what not; but for one reason or another cannot immediately give clear title and consummate the bargain, or B is not ready on his part; both parties, however, desiring that the bargain shall be binding, seek the services of a trust company. A depositing his deed or securities with proper assignments, and B depositing such part of the consideration as may be agreed upon, usually to become forfeited if he fails to carry out his part of the agreement when the proper time arrives.

I need only point out in this connection that care should be taken, in such an escrow, that the position of the trust company does not become one of stakeholder, since a stakeholder must decide whether an agreement has been properly carried out and be the sole judge of its fulfilment or non-fulfilment, an entirely unnecessary and undesirable position for the trust company, unwarranted by any charge it could reasonably make for its services. I venture to suggest, therefore, that in such escrows (and perhaps in all escrows) the instructions to the trust companies should be in writing and signed by all parties to the agreement. If either the grantor or grantee refuse to join in such instructions the trust company simply sits still and permits them to fight it out; if made a party to any suit, it admits the facts of which it has knowledge and prays the honorable court to instruct it as to its (the court's) wishes, counsel usually asking for a proper allowance to cover their duties in the premises. Such is the simple escrow.

Next is one somewhat more in vogue a few years ago than at present: Some

wonderful El Dorado, needing only a few dollars for development to make its shareholders "rich beyond the dream of avarice," or some embryo Standard Oil Company needing a small amount to dig a hole in the ground and enrich the rest of the world; some such enterprise is capitalized by philanthropists who desire, out of love for their fellow-man, to let him in on a good thing by selling him a few shares of treasury stock at ten cents on the dollar (going to twenty cents next week); being philanthropists, or perhaps because they know each other too well, they do not ask that the money shall be paid to themselves direct, but to a trust company, who will hold the stock in escrow and deliver it as sold.

Seriously, gentlemen, I do not mean to intimate for one moment that all enterprises brought out in this way, through the intermediary services of a trust company, are of the character sketched above; far from it. But I do want to point out the dangerous features of this kind of escrow and to show the need of very great caution when such a proposition is brought to us. One particular objection to this form of escrow is the very real responsibility put upon the trust company.

In the State of New York, and I believe in most others, a company cannot issue its own stock for less than par; such stock is often sold, rightly and properly so, by owners who have received the stock at par for property purchased, and in other ways; but when a trust company accepts payments for so-called treasury stock it should be very sure of the bona fides of the proceedings; should have a very intimate and exact knowledge of the transaction; should, in fact, be prepared to accept the moral responsibility entailed as being a very real and legal responsibility; and that, I opine, is outside the proper functions of a trust company.

Again, in this form of escrow there is always the danger of the trust company being held liable for the representations and promises contained in circulars and prospectuses, even when its services have been limited to distributing such papers. One or two recent cases in the New York courts illustrate this danger.

DESCRIPTION OF CERTAIN FORMS OF ESCROW.

Doubtless each of you here can recall various other forms of escrows which I have not touched upon, but I wish now to take up two very interesting forms with which it has been my good fortune to have had more or less to do in my trust company experiences and which formed the original idea of this paper.

First: That of depositary under a plan of reorganization of some bankrupt property; or,

Second: Of the securities of companies which some captain of finance is to weld into one harmonious whole.

While the causes and the results are very different, the details of the work, from the trust company point of view, are largely the same; and, so that my paper may not run on to too great length, let me briefly outline a reorganization:

A railroad, let us say, is unable to meet its fixed charges; its earnings have decreased, its expenses increased; some of its largest creditors and those most interested in its welfare have for some time seen the inevitable; they have consulted together and have determined to try to put the road on its feet again, save all that can be saved from the wreck and put it in such condition as to weather any future storms. To this end the co-operation of all interested parties is necessary. A committee is formed, a call issued to security holders, a trust company named as depositary to receive deposit of securities and issue receipts therefor.

A cynic might find food for thought in the fact that all the large trust companies in New York have an engraved plate of such a receipt at their bank-note company, with some hundreds of certificates already engraved and needing only the printing on them of the name of the road and the class of security to be immediately available.

Securities begin to come in for deposit by mail, express or over the counter; as received they are ticketed, the ticket showing the class of security, amount, name and address of the depositor. As received over the counter, they are examined for endorsement and a temporary receipt given, which must be exact as to the class and amount received, but which allows for more careful examination after the rush is over and before delivery of the formal certificate of deposit, by stating that the securities mentioned in the receipt are received "for examination." This sounds very simple, but we must not lose sight of the fact that we are dealing with an escrow, the parties thereto being the reorganization committee and the depositors, and, like the deed in our first illustration, the securities deposited must be a good delivery to one party or the other. Securities (I use the word in its broad meaning) being thus deposited, become the "grant" of our legal definition, the reorganization

agreement setting forth the "condition," and the certificate of deposit being the trust company's acknowledgment of the obligation. Thus, the theory is simple, the details multitudinous.

I recall a consolidation of the past few years where, on the last day, one hundred and eighty thousand shares of stock were deposited; the day before, one hundred and twenty thousand; three hundred thousand shares of stock, a par value of thirty millions of dollars; and those were the days when every share of stock had to pay two cents transfer tax and each certificate twenty-five cents power-of-attorney tax. One had to look out for stamps so much in those days that one almost regretted the necessity of teaching Spain a lesson in decency. The trust company's receipts having now been delivered, there perhaps comes a lull, but often notices must be sent to depositors, assessments paid, which necessitates the return of the certificates to have the payment stamped thereon, and then the reorganization is perfected. The lawyers have been busy all this time, have foreclosed the mortgages, incorporated the new company, and the new securities are ready for delivery. The same process is gone over again; certificates of deposit come back and receive the pro rata of new securities to which each may be entitled. All the trust company's receipts having been cancelled and all new securities having been delivered, this most interesting of escrows is at an end.

Such is, very roughly, one of the most detailed of escrows and which, with the others I have touched upon, justify, I hope, my sub-title of "varied."

PROFITS TO BE DERIVED.

And now as to the "profitable" feature of this form of trust company business.

When our simple form of escrow, in my first illustration, is brought to us and we suggest a charge of say fifty dollars, the payor is very apt to ask: "Isn't that rather high for holding a few papers for a short time?" To which the very natural reply is: "Yes, but you want considerable more than that or you wouldn't come to a trust company; you want to feel that the negotiable instrument which you are putting in escrow is absolutely safe; that no consideration whatsoever will alter the conditions under which the escrow is established; you want to feel that the depository will treat all parties with absolute impartiality and absolute fairness; the matter is of importance, and so you come to a trust company; and, to have that complete 'peace of mind' and certainty that your agreement will be carried out fairly and impartially, the charge mentioned is very moderate."

I venture to think that you gentlemen here will agree with that statement of the case.

And so, with a moderate charge for a simple escrow, the commission may run into thousands of dollars for reorganization work, with its many details and full responsibility.

"The laborer is worthy of his hire," but, as in the parable, the reward is not altogether in the actual pence paid. The commission paid for the actual work of the escrow should not represent the total of the trust company's profits; the friends made, the new business brought in, the advertising, should all be considered in the sum total of the profitable side of the business.

In conclusion, gentlemen, I submit this paper to your consideration in the earnest hope that, wherever our business lies, this feature may be developed to the mutual benefit and advantage of all concerned.

THE CHAIRMAN: There is a report of the committee appointed to investigate the subject of auditors of trust companies. It is quite a lengthy document and has been reduced to type and is here in bound form. I think it would tire you to have it read, and I think no doubt you would all prefer to have a copy to take with you and read it at your leisure. Therefore, with your permission, we will omit the reading of that paper and distribute the printed copies of the same.

The report of the committee referred to is as follows:

REPORT OF SPECIAL COMMITTEE APPOINTED TO FORMULATE A SYSTEM FOR THE AUDIT OF TRUST COMPANIES.

To the Executive Committee, Trust Company Section, American Bankers' Association—Your committee, appointed at a meeting held April 22, 1902, charged with the duty of framing and printing a system for the daily audit of trust companies, begs leave to report as follows:

At the time of its appointment your committee was under the impression that many trust companies throughout the country had in their employ an officer whose sole duty was to audit the affairs of his company, and the committee understood its duty to be the study of the various systems used by these officers, culling the best methods from each, and formulating the best points so gathered into a complete system that could be adopted by any trust company. Such a report, it was thought, would be of great value to the members of the Trust Company Section.

It immediately became apparent to the committee, however, that it was laboring under a mistaken impression. It began its labors in New York, and at once discovered that not a single company in the entire city had in the past employed an auditor strictly so called. Each company in New York had most excellent methods of checking its accounts and safeguarding its assets. Each company had periodical examinations made either by a committee from its board of directors, or by an expert accountant or audit company employed for the purpose. The methods of the companies varied greatly, but all strove to accomplish the same result. One company had recently taken into its employ an officer called an auditor, whose ultimate business it would be to make daily audits of the company's affairs, but who had not, at the time of the inquiry of the committee, put his plan in operation.

Turning elsewhere, and making inquiries in various sections in the United States, the committee found the same diversified treatment of the subject. As a matter of fact, very few companies employ auditors, but it is fair to say that those who do have an officer whose sole business it is to audit the affairs of the company are loud in their praises of the plan, and declare that under no circumstances would they be without such an officer.

Your committee finally arranged for a meeting in Chicago in February of this year with Mr. E. C. Jarvis, auditor of the Northern Trust Company of Chicago; Mr. T. R. Robinson, auditor of the Fidelity Title and Trust Company of Pittsburg, and Mr. Claude Hamilton, auditor of the Michigan Trust Company of Grand Rapids, Michigan, and to these gentlemen the committee is greatly indebted for valuable information and assistance.

On going into the whole subject very carefully at this meeting in Chicago it soon became apparent to your committee that it would be quite impossible to formulate any system of auditing that would be applicable to the affairs of all trust companies, for the reason that a system suitable for a large trust company, carrying on a general trust business in New York or Chicago or other large city, would be practically useless for a small company carrying on the trust business pure and simple in a small town. As a general statement, it may be said that the business of each trust company differs from the business of the other trust companies—nearly every one has its specialties—and these differences are so very marked as to cause the greatest variety in the methods of keeping accounts, records, etc.

With all these points in mind, your committee found itself wholly unable to carry out your instructions, but, in order that the members of the Trust Company Section may have the benefit of the information gathered by the committee, it has determined to append hereto the suggestions of the three auditors referred to above, each in the form of a report, and recommends to the officers of all trust companies a careful study of all three. And, from these reports, the committee further recommends that each company make up a plan of audit suitable to its own affairs and that an auditor be employed to carry out the plan so devised.

The committee begs further to recommend the adoption of certain, so to speak, elementary safeguards which can be utilized by all trust companies, large or small. It is recognized that one of the greatest dangers of peculation consists in a private conspiracy between the paying tellers' and bookkeepers' departments. In order to make this difficult, it is recommended that the bookkeepers be frequently shifted, as, for example, the bookkeeper having charge of ledger A-K should be transferred, say, to ledger S-Z. In companies of sufficiently large size to warrant it the system of double ledgers should be installed, one being a record of all the daily transactions of the customers, the other showing only the daily balances—each two ledgers, however, covering the same portion of the alphabet. In a particular trust company in the minds of the committee a certain bookkeeper has charge of regular ledger A-K and skeleton ledger (that showing only balances) S-Z. This bookkeeper always has charge of two ledgers, but never of the two ledgers covering the same deposits. It will be seen that frequent changes make impossible any extended conspiracy between the bookkeepers' and paying tellers' departments.

Several companies with whom the committee came in contact offer a premium for the paying tellers' accuracy. In all trust companies or financial institutions where money is paid over the counter the paying teller's cash runs over or short during the year. In the companies above referred to the incentive for correctness is created by offering to the paying teller a bonus, payable at the end of the year, if the differences in his cash are not greater for the year than a certain minimum amount fixed by the officers of the company.

The reports appended hereto treat at length on the dual system of the custody of securities. Your committee regards this system as most important, and recommends that it be instituted in every company where it is possible to carry out the plan. The custody of all securities should lie in two officers, neither having access to the securities unless accompanied by the other.

The committee is impressed with the importance of an audit system, and unhesitatingly recommends its adoption as a matter of necessity and importance.

ANTON G. HODENPYL,

JOHN E. BORNE,

Committee.

New York, September 15, 1903.

SUGGESTIONS FOR A METHOD OF AUDITING TRUST COMPANIES FOR THE USE OF THE COMMITTEE APPOINTED BY THE TRUST COMPANY SECTION OF THE AMERICAN BANKERS' ASSOCIATION.

First: An auditor to receive his authority from the president and board of directors, to whom he shall report periodically the result of his examinations; auditor to be free from all control or suggestions of other officers as to method and time of making examinations; auditor's staff of assistants to be under his control exclusively.

Second: Joint custody by two officers of all securities, which joint custody must be maintained at all times. When securities are removed from the vault for any purpose a form should be left in compartment from which the securities have been removed, giving a list of same, to whom delivered and for what purpose; this form to be signed by both officers. The securities should be replaced before close of business on the same day or satisfactorily accounted for. This will apply to trust funds only, as it is not always practicable in the banking department, except as to investments. The working out of the detail of such an arrangement must be left to each company, as its practicability depends entirely upon the officers and the vault space and conveniences. That it should be done, however, I consider most important.

As the detail is somewhat different, I shall consider separately the banking and trust departments.

Trust Department.

(a) When a trust is accepted the auditor should verify the securities and property turned over, as shown by the trust agreement, and follow up this initial examination by seeing that proper entries are made in the various books.

(b) A daily audit should be made of all payments of money or transfers of securities, as shown by daily transactions in the cash book and journal which have been made from slips or tickets initialed by an officer or some authorized employee, or from other books; the slips or tickets to be properly defaced by the auditor in such manner as would preclude any possibility of their being used a second time.

(c) A periodical examination should be made of all securities held for the various trusts at irregular and unknown intervals; said securities to be compared with the individual trust ledgers and the grand totals with the accounts in the general ledgers.

In making an examination of securities I would consider the following points essential:

Bonds: See that they bear every evidence of genuineness, signed by trustee, etc., and that proper coupons are attached.

Stock Certificates: See that they are signed by the proper officers and bear the corporate seal of the company. I have in examinations at different times come across certificates without the signature of one of the officers or without the seal of the company. Where stocks are held as collateral, be sure that assignment is regular, so that the certificate may be a good delivery.

Notes secured by Trust Deed or Mortgage: See that notes are identical with those described in the deed and are endorsed, and that the trust deed bears the certificate of registration by county registrar.

Mortgages: See that the assignment is regular and recorded.

(d) Examine all bank accounts and verify the balances.

(e) Check in each trust account all income accruing, as shown by the trust securities record. This should be done daily by the auditing staff as the income becomes due. Where real estate is handled the rent roll should also be checked daily, and if the extent of the business warrant one of the auditing staff should visit the premises which have been rented at one time and are reported vacant by the books in the real estate department. Where tenants are shown in arrears for rent a notice or statement should be sent to such person by the auditing department, with the request that an explanation should be sent direct to the department. For checking income, both for trust and investments, I use a card tickler, showing dates of maturity of all income from which are checked credits to income in the various accounts. As all entries for purchase or sale of securities pass through the hands of the auditing staff in the general checking, the necessary changes are made at the time and cards are always up to date.

(f) All statements of account as sent to beneficiaries under trusts should be examined by the auditing staff and compared with the ledgers before being sent out.

(g) Examination of salary account and other expenses, with vouchers.

Banking Department.

(a) Daily Routine: In the daily auditing of the general books I include checking of the additions of all remittances, draft and certificate registers and other subsidiary books from which entries are taken. It may be proper to say that no entries for the general books shall be taken from the teller's cash book. I hold it as a fundamental principle that no entries should be made by a teller other than those necessary for him to make in his own blotter or cash book for the purpose of balancing his cash.

(b) Teller's Cash: The teller's cash should be counted frequently, the oftener the better, taking care to examine at the same time the items which he has charged to the clearings or cash collections, both as to amount and the nature of the items.

(c) Clearings: Checks charged to the clearing house should also be carefully examined and balanced as often as considered necessary.

(d) Loans: Should be balanced and notes carefully examined to ascertain that they are properly drawn. Also that partial payments and payments of interest have been endorsed. When secured by collateral, the latter should be examined in the same manner as detailed in the trust department, and where possible, the value of it determined to insure that the loan is fully secured.

(e) Investments: All stocks and bonds held for investment should be examined in the same manner as described in the securities in the trust department.

(f) Bank Balances: In adjusting the bank accounts I adopt the following method: All advices received from banks of amounts credited (except collections) are turned over to the auditing department. These advices are compared with the remittance registers to insure that the whole amount of remittance, as shown by our books, has been credited or accounted for. As the additions of these remittance registers had already been checked and the totals as carried into the general books compared, I think the ground is fully covered for the time being. At the end of the month, or whatever periods statements of accounts are rendered, the statement is adjusted and all outstanding entries reconciled by me personally, before signing reports of its correctness.

As foreign banks generally charge up drafts to accounts of the drawing bank upon receipt of advice instead of upon payment of draft, I always have the advices compared with the draft registers before they leave the office, initiating both advice and register, with this exception, foreign bank statements of account are adjusted in the same manner as those of domestic banks.

(g) Cash Items: By cash items I now refer to checks received and certified to customers and forwarded for collection and remittance to points where we do not keep accounts. After taking off a balance of this account, there are two methods of verifying the outstanding items: By forwarding a detailed list to each bank of the items outstanding on date of examination and asking them to verify same if on hand or in transit on that date; or by marking them off as returns are received. I prefer the former; the latter, for various reasons, is unsatisfactory, at least I have always found it so.

(h) Individual Ledgers: Individual ledgers should be balanced at irregular and unknown (to bookkeeper) dates. The following plan is adopted here: Ledgers are balanced daily and a list of the balances given to the paying teller for his guidance. Next day these lists of balances are turned over to the auditing department and put under lock and key, so that they can be compared at any time or on any date, without the knowledge of the bookkeeper. Where other systems are followed, other methods of auditing would have to be adopted.

Changing bookkeepers from one ledger to another at frequent intervals and without notice is also an excellent deterrent to any one predisposed to dishonesty, and is a custom that has been followed by us for a long time.

(i) Savings Accounts: In checking the work in the savings ledgers I enter more into detail than in the commercial accounts. Withdrawals as shown by withdrawal receipts and the deposit tickets are checked daily into the respective accounts and are also checked with the entries in the journal which is footed and the totals as carried into the general books compared. The ledgers are balanced at intervals also.

(j) Certificates of Deposit, Cashier's Checks and Certified Checks: Balances of these accounts should be taken off from the items shown as outstanding in the registers. As the entries in these registers have been made from the requisitions initialed by the officers or employee who signed the document, by a clerk other than the one who received the money, and the additions and the total as carried into the general books have already been checked daily, while the payments have also been checked daily from the particular check or certificate which has been canceled by a member of the auditing staff, I consider there can be little chance of manipulation by any dishonest employee. Great care should be exercised to properly cancel a paid check or certificate to preclude all chance of its being used a second time. All spoiled forms should be accounted for and initialed for opposite the respective number in the register, or on the counterfoil or stub, if such are used.

(k) Collections: A difficult department is a bank to safeguard, as there is nothing to balance with, unless collection accounts are kept in the general ledger, which is so cumbersome and entails so much labor that I believe it is not generally followed in this country. The most efficient way to audit this department is to put a member of the auditing staff in charge of it for a time, say during the vacation season for a couple of weeks; any irregularities are then likely to turn up.

(l) Closing Entries: The closing entries for the quarter, half year or year, as the case may be, carrying the profits and expenses into profit and loss account, should be carefully examined and verified.

All calculations of interest on demand loans, accrued interest on certificates of deposit and unearned interest on bills discounted should be checked before the closing entries are made, but this should be a part of the routine work of the office and belongs more properly to the accounting department.

It is not always easy to define the line dividing the responsibilities of the accounting and auditing departments. The two should always be in close touch with each other. It certainly should be within the province of an auditor to watch closely the system of accounting to see that no lax or dangerous methods are permitted to creep into an office, while to the former falls the disposal of the clerical force, the arrangement, division and efficient performance of the routine work. A proper division of the work among the clerks with a due regard to safety should always be the aim of both auditor and accountant and this division, and subdivision, is, if intelligently made with that aim in view, one of the best preventives of systematic defalcations. With a proper system of accounting a portion of the auditing becomes almost automatic. Without such a system no method of auditing ever devised can be effective.

E. C. JARVIS,

Auditor Northern Trust Company, Chicago.

SUGGESTIONS IN RELATION TO THE WORK OF AN AUDITOR OF A TRUST COMPANY.

1. The auditor should be subject to the instructions of only the president or board of directors, or of both; and he should not engage in nor assist in any of the work of the company at the direction or request of any authority other than these.

2. He should familiarize himself with every branch of the work of his company so thoroughly that he would be able, always at his own suggestion and volition, to assist, or indeed to take the place of, for a brief period, any clerk or subordinate officer. And practical application of this feature will be of great value in the general effectiveness of his work.

3. He should keep a daily journal of his work; this for the inspection of the president or board of directors, if they wish to so inspect, and also for his own use in informing himself as to the periodical completeness of his audits. He should also make such reports to the president or board, on general or upon particular matters, as the president or board may desire or direct.

4. It is not necessary, and it is often not best, for the auditor to work out to completeness any branch of audit undertaken at any given time. Sections of any branch of audit may be done at different times. His journal will inform him as to the completeness of audits, as referred to in paragraph No. 3.

5. The auditor should be furnished with the daily or other statements of the condition of the company, and a special feature of his duties should be the investigation of such statements as often as may be practicable, to the end that he may satisfy himself and be able to satisfy the president or board that such statements truly represent what they claim to do.

6. An auditor should have the courage to ask the most pointed questions of officers and employees, and to call for the instant productions of papers or books; and on account of this feature, an auditor needs to possess and exercise the greatest tact, so as to not make himself offensive nor unduly troublesome.

7. The extent of an auditor's work in a thorough checking of entries in cash books, journals, ledgers and other records, must be determined by the force of assistants at his disposal, whether one or more of such assistants, or none. His journal will indicate very clearly whether his work is satisfactory to himself and to his superiors, consistent with the facilities given him.

8. An auditor must take and work upon the system of accounts in force with his own company as he finds it. And as each company differs to a larger or smaller extent from others in system, and as each system has its features of more or less weakness, comparatively, an auditor should direct his best watchfulness upon such supposed weak points in the system of his company.

9. The auditor's journal should contain suggestions and recommendations as to changes in system which in his judgment are desirable. In this way and in addition by timely mention to the president, he will place himself on proper record. Should trouble come to his company, the auditor will stand or fall principally, of course, according to the merits of the particular case, but also according to the degree of diligence in his work as shown by his journal, and also to some extent according to whether his proffered recommendations have or have not been adopted.

10. From all ledgers and other books capable of such test, trial balances should of course be taken at proper intervals, and such trial balances should be promptly and regularly filed with the auditor. There are also features involving the collection of certain revenues, such as rents for instance, concerning which written statements can be made, which statements should be made and filed with the auditor. And all of such trial balances and statements should be certified as correct by the person immediately in charge. The auditor should endeavor to secure such signed trial balances and statements from as many departments of the company as is at all possible. It is presumable that in many cases intending wrongdoers will hesitate, with good results, before certifying a false trial balance or statement. It will probably not be possible for the auditor to check and verify all of such trial balances and statements; as to which of them shall be verified is a matter for the judgment of the auditor.

11. For reasons indicated in paragraph No. 8, it is regarded as very difficult, if not impossible, to detail a uniform system of auditing trust companies so as to cover all the various branches and include new matters always liable to arise; so that the writer of this paper feels constrained to touch upon but few specific points, as follows:

12. Deposits: With trust companies where two or more individual bookkeepers are employed upon several ledgers, the bookkeepers should be changed about from the different ledger at intervals, all according to the direction of the auditor. Also, no company should allow pass books to be balanced by the individual bookkeepers; such balancing should be done by an entirely different clerk. Then with these safeguards the auditor in his examinations will check trial balances with ledgers. He will also have an easy access for the examination of particular accounts to which his attention may be attracted, the files of deposit slips and the files of paid and canceled checks. He will have for mailing, personally and without the knowledge of others, to depositors whose accounts may attract his attention, a notice requesting a prompt sending in of the pass books for balancing; such notice to be properly worded so as not to excite suspicion. He will have free and easy access

to the signature and address records giving the addresses of all depositors. He will try to require the constant correcting of such addresses, to the end that he may at all times be in shape to promptly communicate with the depositors.

13. The last part of the preceding paragraph should be applied generally to all the departments of the company to the same end as is there indicated.

14. Loans: The examination of loans should be done in the usual way, the inspection of paper, the examination of the collateral, the checking with the trial balances, the comparison with the ledger account, etc. This branch of the work should include the examination of the interest payments upon loans. For the account of brokers working under general collateral agreements instead of specified notes the best method of auditing is to have the auditor at proper and practicable times make a list of collateral actually on hand as he finds it, and to take such list to the broker's office and check same with the broker's books.

15. Examination of Trust Securities: The system of the company should provide for advising the auditor, or for enabling him to otherwise know, of the entrance of new trusts upon ledgers, and he should thereby verify such entries of new trusts by checking with the original inventory or other satisfactory evidences. Thereafter the trust ledger accounts should be the data for him with which to check the securities in his periodical examinations of same. In large trusts and of long standing, where securities have been much changed by increasing or decreasing or disposal, checking with the original ledger entries is difficult. With most trust companies there are secondary accounts kept, ledger or otherwise, showing the net securities at present on hand; such, for instance, as the card system, having a head card for name of estate and a card following for each security with all particulars of same thereon, kept corrected to date. The auditor may, for greater expedition, take such secondary accounts for checking with the securities, provided such secondary accounts are not accessible to the persons having access to the security safes; but even then there should be occasional checking between such secondary accounts and the original matter in the ledgers. As to a proper custody of securities, trust and otherwise, during examinations, it is very difficult to find a satisfactory method that is really practicable in a large and busy trust company. The idea of the writer of this paper is that in all such examinations, one of the chief officers of the company should appoint a subordinate officer or chief clerk of the company to be with the auditor during such examinations, disallowing suggestions or request of the auditor as to who such assistant shall be; the auditor having the right to require the immediate appointment of such assistant whenever and as often as he, the auditor, may request. The writer of this paper considers a rule providing for dual entrance to security safes, for the changing of securities, etc., to be of the greatest importance. In the inspection of securities an auditor cannot be expected to pass upon the legality of documents, but he should use his layman's mind for the catching up of irregularities, omissions in execution, etc., to the best of his ability.

16. General Ledger: In the banking department the auditor should make periodical examinations of the general ledger, which is perhaps the fountain head of all of the business of the company, by inspecting every account and by investigating such accounts of entries as may arrest his attention. He should keep a careful watch of every detail of the profit and loss account. He should also make similar inspection of trust ledgers.

17. Journal Entries: No entries should be made in ledgers without first originating in cash books or journals, and for all journal entries the bookkeeper should first have, as his authority for making such entries, slip entries duly approved by a proper officer; and the auditor should not pass any journal entries without such approved slip entries.

18. Loose Leaf Ledgers: Where such ledgers are used, the auditor should see that all loose leaves when ordered are numbered in consecutive order, that proper registers are kept in the using of the leaves, that all persons receiving supplies of such leaves are properly charged with same, and that in this way every leaf ordered and received by the company is properly accounted for. Spoiled leaves, or leaves given away as samples, should be so indicated in the register, with the initial certification of two officers. The loose leaf ledger is one of the most convenient and at the same time one of the most dangerous innovations of modern book-keeping. But it has no doubt come to stay, and an auditor should try to apply proper safeguards accordingly.

19. Receipts and Disbursements: As a general rule the auditor will have evidences, of one kind or another, to satisfy himself concerning disbursements. He

should scrutinize all such evidences with the usual proper care. The matter of receipts is more difficult to handle; but the auditor should endeavor to see that all due income is properly accounted for; by proper dual system of sending out bills and the payment of same; by calling for signed statements concerning due income proving to be uncollectable; and by proper personal investigations.

20. **The Audit of the Payment of Interest Coupons and of the Redemption of Bonds of Other Corporations:** The system of the company should provide that the clerk in charge of such payments shall cancel such coupons and bonds each evening without exception; and that he shall thereupon pass such coupons, etc., to a second clerk for custody and for verifying as to count and total cancellation. This verification by a second clerk may be done on the next succeeding day. The length of time intervening before detection of fraud arising from omission of this dual feature of this rule, varies with the frequency with which coupons are surrendered to customers, whether monthly, quarterly, or semi-annually. The auditor should count such coupons and verify with ledgers, to such an extent as he may have time and facilities so to do.

21. **Escrow:** The writer of this paper thinks that too little importance is attached in most companies to the proper entering and auditing of escrow matters; and that such that is recorded on slips, with however great care, should instead be made matter of permanent record. His idea is that there should be an imperative rule requiring all escrow matters to be detailed in proper ledgers, by a clerk, designated for that purpose, to the end that the auditor may be enabled to examine such securities, etc., the same as other securities of the company.

22. In connection with the examination of securities, trust and company, a good arrangement is for the auditor to do the work of clipping the maturing interest coupons. This work will take but little of his time additional to that of the audit work; it will provide opportunities for audit at each period of such clipping; and it will save a separate handling of securities for coupon clipping purposes by some other officer of the company.

23. The writer regards the system of his own company, the Fidelity Title and Trust Company of Pittsburg, in general and in detail, as a model in general excellence. In some details its particular system does not agree with the suggestions, etc., embraced in this paper; but the writer has had in view, in this paper, trust companies in general, and banks and trust companies and corporations with which he has had more or less experience in auditing.

T. R. ROBINSON,

Auditor Fidelity Title and Trust Company, Pittsburg.

SUGGESTIONS AS TO THE AUDITING OF TRUST COMPANIES.

The business of a trust company itself, and the various classes of business in which different trust companies engage, make it difficult to give any set rule or form for a complete audit.

In addition to the audit of the trust company's own assets, the various relations in which the trust company is acting as trustee, executor, and other trust capacities, each one of which is a business in itself, requires for it a special audit, and in the audit a consideration of that particular trust.

The writer has therefore divided his suggestions as to making the audit under two heads:

1. The audit of the trust company's own assets.
2. Of the assets which it holds in trust.

The business of the Michigan Trust Company is divided into five departments: Teller's or banking department, mortgage department, real estate department, trust department, safe deposit vaults, besides the auditing department, which is a department in itself.

Each of the departments partakes of the daily system of checking which is in vogue with us.

Receipts Checked.

Receipts from all departments pass through the teller's department each day, and are accounted for by entries in ink on tickets; entries are made from these tickets by the various clerks, on the auxiliary books in the different departments, such as the general ledger, the mortgage record, the rent record, the safe deposit record, and the general ledger of the trust department.

These tickets are returned to the audit department every day at the close of business, and are checked with the teller's cash book the first thing the next

morning; in this way all tickets representing receipts are accounted for and checked with the teller's cash book. The tickets are then filed.

Vouchers Authorized and Checked.

Tickets for disbursements of expenses and all other items are O-K'd by an officer, and receipts of payees are part of the daily tickets which pass through and are examined by the auditor. Disbursements for trust account are made by duplicate vouchers, the duplicate being used as a memorandum from which entries are made in the various books of record, and are returned to the audit department at the close of each day's business to check the teller's cash, the original being sent out for payee's signature and return.

All tickets, both for receipts and vouchers for disbursements, after having been checked with the teller's cash book, are inspected by the auditor to see that the same have been properly made out, and that all entries have been duly made on the books of record of the various departments, we having adopted the system of having a check mark on each ticket made for each book of entry in a department. The auditor from his familiarity with the system can tell by glancing at the ticket whether the entries have been made.

Cash.

At irregular intervals once a month, the cash in each department, the teller's department especially, is checked up and counted.

Bonds, Securities, etc.

During each month the bonds and other securities belonging to the company are checked, the actual bonds being counted and verified with the charge to bond account on the general ledger.

Accounts with Reserve Banks.

The accounts with reserve and other banks are reconciled the first day of every month.

Mortgages Checked.

The mortgages are gone over every month in the same manner as far as possible as the bonds, the notes being inspected for endorsements of principal and interest, and the total amount of the mortgages verified with the debt to that account on the general ledger.

Income Due Company.

To check the income due the company, such as interest on bonds, interest on mortgages, interest on demand and time loans, fees due from the trust departments, safe deposit vault, box rentals, we adopted a book in which could be entered each demand and time loans providing columns for the interest maturities and principal payments. The mortgages are entered in the same way, and the fees from the trust department in practically the same way, by giving a space for each trust, a column for the payment of the fee and another showing the date on which the fee should be paid. The rentals from the safe deposit vaults are given a line for each number of box and the renter's name, a column for the maturity of the rental, and a column for the payment. This book is kept exclusively by the auditor, and as the tickets which we have before mentioned are turned in for all the departments, he reserves the company's income tickets and enters them up in the various columns in this book. At the end of each month he goes over every income account carefully, such as demand and time loans, mortgages, trustee's fees and safe deposit vaults, and by glancing down the maturity column and the column in which the payments have been entered during the month, he is enabled to see whether every item of income due the company has been paid during that month. He makes a list of the items which are unpaid, and looks up each one for an explanation.

Balances of Principal.

He also balances his income record as to principal payments, his record of time and demand loans; mortgages and all other accounts appearing in his record being balanced each month with the debit appearing on the general ledger, which is a further check.

This will give as completely as is possible an audit of all the company's assets, and keep check on the items of income due the company.

Monthly Inspection.

A monthly inspection is given each department in addition to the above audit, to see that the various books of account are properly written up and that nothing is lagging.

Individual Accounts.

Our company does not engage in a general banking business, and has comparatively few individual accounts in comparison with other companies; so that suggestions from our auditing department would not probably be practicable for other companies, but the accounts which we have we purpose to have written up once a month and statement made to the depositor. Each of the statements of account as they are sent out is examined by the auditor.

Trust Statements.

It is our practice to render our statements where we are acting as trustee for individuals quarterly. As executor, administrator and guardian we are required by court to make an annual accounting.

Trust Income.

The statement is drawn off in rough from the general ledger of the trust department, and the auditor goes over each statement, making an audit of that particular trust as though it were a separate business in itself.

Interest and Dividends.

All items of interest are compared with the last statement, to see if the annual and semi-annual or quarterly dividends and interest follow the income from the statement before, and that the income corresponds with the actual securities listed in the trust.

Rentals.

The rentals are compared with the rentals appearing on the rent record of the real estate department.

It has been found very hard in the matter of accounting for rentals, to give this a complete audit, and it can only be done by an intelligent comprehension of the earning capacity of each property. In case where property with a large amount of rentals is in any trust, one realizes that this is difficult, and only an approximate audit may be obtained.

Disbursements.

The disbursements are checked with the vouchers which, as mentioned before, have been retained, and filed with each trust.

Securities.

The bonds, mortgages, bills receivable and other securities are checked with the records of each department, and the actual securities themselves checked with the statement where it is necessary other than the general checking of the securities as stated below.

Disposition of Statements

After the statement has been checked over, it is O-K'd by the auditor and typewritten, and in the case of a trusteeship, sent to the beneficiary and receipt enclosed for signature, as a verification. This blank when returned is attached to a duplicate copy of the statement and filed away with the papers in that trust.

Securities.

We have mentioned in trust accounts that the actual securities are checked when necessary with the account appearing in the statement. This would be true of stock certificates and notes and mortgages, and in some instances of bonds, but the bonds held in trust are checked in a much more effective way.

The bonds belonging to trusts are kept in a special safe in the safe deposit vaults, and access is given to them only by two officers of the company at once. If any bonds are taken out, a slip is put in their place.

In the trust department ledger appears a column outside of mortgages, for securities, which includes the bonds which are itemized in the various trusts.

Every month the auditor draws off from the trust department ledger a list of all bonds, and has the trust department safe opened by two of the officers, and in

their presence checks up the bonds with the actual list which he has obtained from the trust department ledger, and verifies the actual securities.

This will cover the audit of all our accounts in a general way. It has been found very difficult to express, without a very extensive paper explaining each record of the company and its system of bookkeeping, the manner of our auditing. We have found, however, that the auditor must not merely work in a machine way, but must have an intelligent comprehension of all matters in the company's interest, and in that matter only can an audit be successful. **CLAUDE HAMILTON,**

Assistant Secretary the Michigan Trust Co., Grand Rapids, Mich.

THE CHAIRMAN: The next in order is a paper by Hon. Lyman J. Gage, President of the United States Trust Company, of New York, and ex-Secretary of the Treasury, on the subject of Trust Companies as Trustees. In Mr. Gage's absence, our secretary, Mr. Branch, will read the paper.

The paper was then read by the secretary.

Mr. Gage's address is published elsewhere in this issue of the *MAGAZINE*.

THE CHAIRMAN: I am sure we are very much indebted to Mr. Gage for the very interesting paper he has given us, which we have just heard read.

We will now listen to an address by Mr. P. C. Kauffman, vice-president of the Fidelity Trust Company, of Tacoma, Washington.

MR. KAUFFMAN: Mr. Chairman and Gentlemen of the Trust Company Section—At the recent convention of the bankers of our State, our retiring president, ex-Governor Moore, made an observation that the communications of the banker are usually "nay, nay," "yea, yea," as more than that is superfluity. Bankers usually read their addresses. So I trust I will be pardoned in reading mine.

**THE TRUST COMPANY MOVEMENT IN THE PACIFIC NORTHWEST.—ADDRESS OF
P. C. KAUFFMAN, SECOND VICE-PRESIDENT FIDELITY TRUST COMPANY,
TACOMA, WASHINGTON.**

To give the history of the trust company movement in a section of the United States in which it has but started is almost as difficult as to write a biographical sketch of a new-born infant. Necessarily, therefore, most of my observations will be largely speculative.

After setting forth the provisions of the laws regulating their organization and controlling their operation, I will consider briefly the place of trust companies in the financial system of the Pacific Northwest, their opportunities for usefulness and their probable growth.

It should be remembered that the Pacific Coast States are all what are termed Code States; that the common law of England is neither the controlling factor in judicial decisions nor legislative enactments. The common law maxim of "time out of mind" has no place in States of so recent an origin. The law of the land is therefore legislative enactment as modified and defined by judicial construction.

Of the three States comprising the Pacific Northwest—Oregon, Washington and Idaho—but two of them, Washington and Idaho, have enacted legislation regulating the organization and management of trust companies, and these laws are of too recent a date to admit of any judicial construction or practical experience as to their adaptability and value; the so-called trust company law of the State of Idaho having been passed in 1901, and that of the State of Washington, March, 1903.

IDAHO.

The Idaho statute, approved March 16, 1901, is very short, containing but six sections; broad as to power and privileges granted, but lame in restrictions and safeguards. Under the provisions of this act, trust companies are authorized:

To furnish abstracts of and insure titles to real estate. To act as trustee, assignee, receiver, guardian, executor and administrator and take and execute trusts of any nature not inconsistent with the laws of the State or of the United States. To act as fiscal or transfer agent of any State, municipality, body politic, or corporation. To take, receive and hold any and all such pieces of real estate as may be the subject of any insurance made by such company, with

power to grant, bargain, dispose or sell, as may be deemed proper. To purchase and sell real estate and take charge of the same. To become security for the payment of damages that may be assessed and directed to be paid, for lands taken for the building of any railway, or for the opening of any streets and roads, or for any purpose whatsoever where land or property is authorized to be taken. To become security upon any writs of error or appeal.

So much as to the powers of Idaho trust companies. As to the restrictions and safeguards, there are practically none, except that the paid-up capital of companies organized under this act must be at least \$25,000. There are no provisions regulating or requiring an examination, periodical reports, publication of statements or supervision of any nature whatsoever.

The growth of trust companies has been very slow in Idaho, there being at present but two operating in the State, viz., the Idaho Trust Company of Lewiston, organized in 1902 with \$90,000 capital, and the Coeur d'Alene Bank and Trust Company of Coeur d'Alene, organized in 1903. From correspondence I have ascertained that their business at present is confined to that of a regular commercial bank, receiving deposits and making commercial loans, their fiduciary power being but seldom invoked.

OREGON.

There is no special law regulating the incorporation of either banks or trust companies in the State of Oregon, all such companies being organized under the general corporation law of the State; nor is there any provision in the general laws that will permit corporations to act as executor, guardian or administrator, so that the custom in that State has been when any fiduciary business is entrusted to a trust company to have one of its officers appointed by the court, the company furnishing the necessary security, and the business carried on the company's books, just as though the company was acting itself.

Neither banks nor trust companies organized under the laws of Oregon are required to publish statements, make periodical reports or submit to any examination or State control.

Nevertheless, hampered as they are, their business is steadily growing. The trust companies at present doing business in Oregon are: Portland Trust Company, organized 1887, capital \$300,000, deposits \$500,000; Security Savings and Trust Company, organized 1890, capital \$250,000, deposits \$3,000,000; Pacific Trust Company, organized 1902, capital \$52,000; Title Guarantee and Trust Company, and the Security Abstract and Trust Company, the business of the last two companies being largely devoted to searching and insuring titles, and managing and selling real estate.

All these companies are located in Portland, a city that for years had undisputed control of the trade and commerce of the Pacific Northwest. Notwithstanding the rapid growth of the leading cities of Washington—Seattle, Tacoma and Spokane—the trade and commerce of Portland is increasing by leaps and bounds, and its banks, trust companies and financiers are leading factors in the development of that great territory—

"Where rolls the Oregon, and hears no sound
Save his own dashings."

WASHINGTON.

Up to June 17 of the present year the conditions as to organization and management of trust companies in the State of Washington were practically the same as in Oregon.

They were organized under the general corporation act, the only restrictions being a minimum capital of \$25,000, of which sixty per cent. had to be paid in, and the double liability of shareholders. An annual report to the State Auditor, setting forth in extenso their resources and liabilities, was also required. The trust company proper, as distinguished from a bank, in the State of Washington, was created June 17, 1903, when the act passed at the spring session of the Legislature came into effect.

Notwithstanding the fact that a number of trust companies, viz.: Fidelity Trust Company, Tacoma, capital \$300,000, surplus \$40,000, deposits \$1,600,000, organized 1889; Spokane and Eastern Trust Company of Spokane, capital \$100,000, deposits \$3,000,000, organized 1890; Walla Walla Safe Deposit and Trust Company, Walla Walla, capital \$25,000, organized 1900; American Savings Bank and Trust

Company, Seattle, capital \$200,000, deposits \$250,000, organized 1901; Northwest Trust and Safe Deposit Company, Seattle, capital \$25,000, deposits \$100,000, organized 1902; Everett Trust and Savings Bank, Everett, capital \$25,000, organized 1902, had been organized and were transacting business under the general corporation laws, there was a great divergence of opinion among the judiciary of the State whether in the absence of express statutory authority such companies could be appointed as executor, administrator, guardian, or act in any fiduciary capacity, some of the courts ruling affirmatively and some granting conditional powers, while others denied absolutely all such privileges.

COMPANIES TRANSACT A REGULAR BANKING BUSINESS.

Strange as it may seem, the question has never yet been brought to the Supreme Court of the State for final adjudication. The courts of my county have uniformly held that a corporation, being an artificial person created by law, could perform any and all acts that a natural person could perform, and the Fidelity Trust Company of Tacoma, the institution with which I have the honor to be connected, has been frequently appointed executor, guardian, administrator, or administrator with the will annexed, and such trusts have been duly executed, accounts settled and approved and the company discharged. We have, however, been refused appointments in other counties. Necessarily, therefore, the business of trust companies in Washington, as in Oregon, has been chiefly that of a bank, and all such companies now transact a regular banking business, as well, receiving deposits, general and special, and making regular commercial loans, as well as loans based upon collateral. They all have savings bank departments and are members of the local clearing house, and stand on even footing with other financial institutions in the State.

WASHINGTON'S NEW TRUST COMPANY LAW.

In order, however, to settle the question definitely so that fiduciary powers could be conferred upon them without question, and particularly to facilitate the organization of the Washington Trust Company, in the city of Seattle, a considerable part of whose capital was to come from the East, and which is now in successful operation, with a capital of \$300,000 and surplus of \$200,000, a very carefully worded and safeguarded measure was introduced in the Legislature last spring and finally passed and approved by the Governor. One of the amusing incidents of its passage was the stout opposition it received from many members owing to their fear of the word "trust," many of them imagining that some huge combination in restraint of trade or commerce was contemplated. The act was very carefully drawn, and its provisions are based principally upon the existing laws of New York, New Jersey and Massachusetts regulating such companies.

The powers granted to companies organized under the act are very broad, comprising, in fact, every power enumerated in the laws of the States above named, so I will not burden you with what would only be a vain repetition. Suffice it to say, a trust company in the State of Washington, organized under the act of 1903, can act in any fiduciary relation, execute or perform any trust, either by appointment of court or individual. The restrictions and safeguards are drawn with equal care, the principal ones being: That in cities of over 25,000 inhabitants the capital stock must not be less than \$100,000. Before a company can transact any business the Secretary of State must examine it to ascertain if its capital is fully paid in cash. The directors must each own not less than ten shares of stock and subscribe to an oath similar to National banks. It cannot loan to stockholders its trust funds, nor make a loan upon the security of its own stock.

The interests of depositors are safeguarded along the same lines as National banks, and every trust company is under the strictest surveillance and supervision of State officials; their solvency and sound management are insured by a rigid system of inspection; all books, records, papers, loans and instruments being open to the inspection and examination of State officials at any moment and without notice. The examiner has power to administer oaths to the officers and employees; the company must make and publish statements of its condition, verified by the oaths of its officers.

The trust company movement, as I said in opening, is of too recent birth in the Pacific Northwest to have achieved a position in any degree differing from a

bank in our financial system, save only in those localities where the courts have extended to them fiduciary powers, but it is easy to see that the times are now ripe for their extended usefulness.

FUTURE OF THE PACIFIC NORTHWEST.

It is universally conceded that the twentieth century will be noted as the period of the world's great struggle for commercial supremacy and that the arena of that conflict will be transferred from the Atlantic and Mediterranean to the Pacific and Yellow Sea. The United States, commanding as it does the Hawaiian and Philippine Islands, the most important strategic points in the Pacific, occupies a most advantageous position, destined to make this nation the ruling factor in that great struggle. The possible, nay the probable, extent of that commerce is beyond comprehension. Without encroaching upon the great city of San Francisco, sitting complacently at the Golden Gate watching the wealth of the Orient pour over its docks, it must still be acknowledged that the Pacific Northwest is rapidly developing into a most important factor in the commerce of the Pacific.

The aggregate commerce of the Orient with the Occident in 1902 was considerably over two billions of dollars, that of China alone being over \$300,000,000. Out of this vast commerce the United States had less than ten per cent. Yet is it not clear that when Congress and the people of the United States awake to a full realization of the grandeur of their destiny, and the greatness of their opportunities, considering our central position between the Atlantic and Pacific, our excellent transportation facilities, our varied and inexhaustible resources, and the steadily increasing dependence of the world upon us for the necessities, and even many of the luxuries, of life, we will see the enactment of such legislation as will in but a few years re-establish our merchant marine, cover the Pacific with great vessels, bearing at their peaks the Stars and Stripes, and pour into our treasuries wealth incalculable.

In the development of this vast commerce, great will be the opportunities for usefulness for the trust companies of the Pacific Northwest, and when it is considered that the area of the three States comprising that territory is over 250,000 square miles, an area equal to that of the New England and Middle States combined, with Maryland, Virginia and West Virginia thrown in, it is not difficult to imagine how great will be their growth in the near future. No section of the United States contains within its boundaries more varied or extensive resources—riches are there in all forms, requiring from man but little more than the effort of lifting his hands in order to secure them. He may pluck gold from the wealth of trees that adorn its western slopes; take it from the watered gardens of its eastern plains, which far surpass in fertility the world-famed valley of the Nile; dig it from the hillsides in the form of minerals, or dip his seine in the great Columbia River, or in the deep bowl that holds the waters of Puget Sound.

Upon the trust companies will ultimately devolve the work of financing the great enterprises that will develop these abundant riches and resources. The four great natural resources of agriculture, lumber, mining and fishing, in the States of Oregon, Washington and Idaho, added to the material wealth of the United States in 1902 nearly \$250,000,000 in gold, an increase of nearly \$50,000,000 over the preceding year, an amount that will be rapidly increased with the completion of the great irrigation enterprises now being instituted and fostered by the wise decision of Congress and the general government to "impound the floods and reclaim the arid lands."

The future is bright with promise for the Pacific Northwest, and will see the establishment of great steamship lines, immense iron and steel plants and a countless number of manufacturing enterprises to supply the wants of a rapidly growing commerce, and in assisting the growth and development of all these the trust companies of the Pacific Northwest may be depended upon to do their part.

THE CHAIRMAN: The opportunity now exists for short talks upon any subject that is interesting, or anything that is pertinent to the paper that we have just listened to.

CLARK WILLIAMS, Vice-President United States Mortgage and Trust Company, of New York: There has perhaps been no question so generally discussed among trust company people in the East during the last year as that of a

required cash reserve, and in view of possible legislation affecting the matter in several States, it may not be amiss to give you a few facts which have not yet been published bearing on the situation in New York.

At the time of the promulgation of the rule requiring trust companies clearing through the New York Clearing-House to keep a cash reserve in vault of five per cent. of total deposits, which reserve is to be increased to ten and later to fifteen per cent., the United States Mortgage and Trust Company received from the other trust companies in Greater New York figures necessary to enable us to make a comparison of facts relating to the business of the trust companies and the clearing banks, which I hope will be of general interest as bearing directly on the question of the necessity of these reserve requirements for trust companies. The deposits of forty-nine trust companies in Greater New York amount, in even thousands, to \$741,060,000, against the clearing banks of \$944,790,000. The cash resources of these trust companies amount to 16.81 per cent. of their deposits, as against the banks' reserves of 26.45 per cent.

It should be borne in mind that the statutes under which these trust companies in New York conduct their business necessitate the investment of capital in certain prescribed securities and the deposit with the banking department of approved securities equal to ten per cent. of their capital.

In a fair consideration of the subject it should also be remembered that the trust companies include, in figure of total deposits, moneys held in trust and time deposits which are not subject to withdrawal at will. Although the deposits of the trust companies and banks are as 741 to 944, the exchanges and checks drawn against these trust companies during the year ended December 31, 1902, amount to only \$4,725,750,000, as against checks on the banks paid through the New York Clearing House amounting to \$74,753,180,000, or only six per cent. of the total clearings and checks drawn in New York.

It would seem from these figures that the bulk of the trust companies' deposit business still differs from that of the banks by a surprising margin and that the necessity for the maintenance of the prescribed cash reserve in vault may be a little overdrawn.

THE CHAIRMAN: If no other gentleman present has any subject he would like to bring up, or any remarks or discussion to offer on any of the papers that have been read, we will proceed with the regular routine of business, which will be the nomination and election of three members of the executive committee to serve for the period of three years; also the election of a chairman and vice-chairman of the Trust Company Section.

CLARK WILLIAMS: Mr. Chairman, it gives me great pleasure to nominate as chairman of the Trust Company Section of the American Bankers' Association Mr. Breckinridge Jones, Vice-President of the Mississippi Valley Trust Company, of St. Louis, Missouri. We all know Mr. Jones, and it would be a presumption on my part to say anything in his behalf.

MR. HARTLEY: Mr. Chairman, I take pleasure in seconding the nomination.

THE CHAIRMAN (after a pause): If there are no further nominations, is it your pleasure that the secretary should cast the vote for Mr. Jones, as chairman of this section?

Upon motion the secretary was instructed to cast the vote of the section for Mr. Breckinridge Jones as chairman.

THE CHAIRMAN: Mr. Breckinridge Jones is unanimously elected chairman. Nominations for vice-chairman are now in order.

August Schlafly, President of the Missouri Trust Company, St. Louis, seconded by A. A. Jackson, of the Girard Trust Company, Philadelphia, nominated E. A. Potter, President of the American Trust and Savings Bank, of Chicago, for vice-chairman.

There being no further nominations, the secretary was directed to cast the ballot of the section for Mr. Potter, and the ballot was cast accordingly.

THE CHAIRMAN: Next in order are nominations for three members of the executive committee to serve for three years.

Clark Williams, Vice-President of the United States Mortgage and Trust Co., of New York, was nominated.

MR. JACKSON: Mr. Chairman, I desired to nominate Mr. Williams myself. I take pleasure in seconding the nomination.

THE CHAIRMAN: Two other nominations are necessary, and in order.

E. SHORBOCK, President Northwest Trust and Safe Deposit Company, of Seattle: Mr. Chairman, I nominate Mr. E. H. Reninger, Treasurer of the Lehigh Valley Trust and Safe Deposit Company, of Allentown, Pennsylvania. Mr. Reninger has taken a great deal of interest in the work of this section.

The nomination was seconded.

MR. LOCKE, Trust Officer United States Trust Company, St. Louis, Mo.: Mr. Chairman, it seems to me, in view of the general hospitality we are receiving from California, that some gentleman from this State should be on this committee. I, therefore, wish to nominate the President of the Mercantile Trust Company, of San Francisco, Mr. Frederick W. Zelle.

The nomination was seconded by A. McCracken, President Central Trust Company, Camden, N. J.

THE CHAIRMAN: If there are no other names to be presented, we having had three gentlemen already nominated, I presume the same course will be pursued in the matter of balloting for these names which has been pursued in the election of the other gentlemen.

Upon motion, the secretary was instructed to cast the ballot of the section for Clark Williams, Edward H. Reninger, and Frederick W. Zelle as members of the executive committee.

The secretary cast the ballot as instructed, and the chairman announced that the gentlemen named were elected.

THE CHAIRMAN: Our programme gives opportunity for suggestions for future work of the Trust Company Section, and if any gentlemen present have suggestions they would like to make from the floor, we would be glad to hear them. If not, the secretary would be glad to receive communications in writing.

MR. SHORBOCK: Mr. Chairman, as Mr. Potter has been elected vice-chairman of the section, it may be necessary to nominate some one in his place as a member of the executive committee.

THE CHAIRMAN: The executive committee will take note of that fact.

A. A. JACKSON: Mr. Chairman, this is my first visit to this section, and as you have kindly said that any of the members may make suggestions for future work, might I ask whether it might not be well for some strenuous effort to be made during the next year to obtain a larger representation than we have here, larger in proportion to our membership? I do not mean by that to say that a strenuous effort has not been made; but it seems that we have a small number present in proportion to our membership, and it would be very gratifying to us if it could be made larger.

THE CHAIRMAN: I think that is an excellent suggestion. I would like

to say that this meeting is the smallest in number of this section that I have ever attended. I presume this fact is accounted for very largely by reason of the fact that the trust companies of the country are, to a great extent, located in the Eastern cities, and the distance to San Francisco is great, and many members who would have attended, perhaps, for this reason have not deemed it convenient or wise to make the journey. At our meeting in Milwaukee, and at our meeting in Cleveland, and also our meeting in New Orleans, we had a large attendance. I am sure that is nothing against the location of this convention, but still it has probably been a matter of inconvenience for a great many members to attend. I presume that the present financial condition of the country, particularly in Wall Street in the East, may have had something to do with deterring some other members from coming here, who would have been glad to attend.

I think the suggestion of Mr. Jackson is an excellent one, and in my report to the executive committee I call especial attention to this—that every member should endeavor to interest others who are active in the work, and really interested in the work, to attend these meetings of the section.

BENJAMIN I. COHEN, President Portland Trust Company of Oregon: Mr. Chairman, some years ago there was a book gotten up by some one in reference to trust companies that was of inestimable value. We have quite a large business in what I call trust by private agreement. We have revised our old forms. I have been in the habit of going East once a year, and exchanging views with other trust company people, in order to learn from them what they are doing. It seems to me we ought to have a special bureau established, or at least some individual appointed, to whom the different companies could send copies of anything unusual in the way of trusts, that they are handling, so that others might have the benefit of that information. It might be a valuable thing to do something of that kind. I was visited by a trust company officer in one of the States of the Middle West, and when I spoke to him about what we were doing in this line of business, it was all entirely new to him. I frequently have had the same experience myself; other people have mentioned matters connected with their business which has been new to me. I merely mention it as a suggestion.

THE CHAIRMAN: I think the suggestion is an excellent one, and it seems to me that the appropriate place for all such forms and literature to be centered is with the secretary, Mr. Branch, who is conveniently located in New York city, and has the disposition and the facilities to attend to that matter.

MR. SHORROCK: I would suggest as following on that the desirability of not waiting for requests or enquiries, but that the secretary should disseminate that information to the members of the section. The Trust Company Section has, as I understand it, two or three thousand dollars on hand, and that money could be very well expended in disseminating information of that character. The United States Mortgage and Trust Company, of New York, has recently issued a valuable publication covering the statements of the trust companies there. Matters of that kind, I think, could well come within the purview of this section, and that this information should be disseminated in the way that I have indicated.

Now, other matters might be taken up in the same way. The matter of safe-deposit boxes and deposit funds is something that might be gone into. The laws governing safe-deposit boxes vary throughout the country, and it is a matter of doubt in the minds of many companies how they stand.

from a legal point of view, in many contingencies. I think that is a very important point. The committee could ascertain, through enquiry from the various companies, what difficulties they have met with, and how they have overcome them. They could ascertain what laws they have found to prevail, and some steps might be taken, I think, for codifying the various laws on this subject. This is, as we recognize, a very important part of trust company operations; but, as I have said, so far as I have been able to ascertain, the exact liabilities of a company, and the steps it should take to meet those liabilities, are more or less unknown, and in a very unsatisfactory state.

I make that as an additional suggestion for work for the executive committee.

MR. KAUFFMAN: Following the suggestion of Mr. Shorrock, Mr. Chairman, the American Bankers' Association, as I know, has been active in securing the enactment of a uniform system, or, rather, a uniform negotiable instruments act, which is now in force in probably fifteen or twenty of the States, and will ultimately, undoubtedly, be adopted by every State in the Union.

Our decisions in the State of Washington are very conflicting as to the responsibilities of the company in the matter of the safe-deposit boxes; that is, as to the power of the court to open those boxes when controversies arise between individuals, forcing the companies to go to considerable expense in defending actions where they have no interest whatever in the ultimate result. It might be possible that this section could have drafted a law regulating the safe-deposit department of trust companies, regulating rights and responsibilities, have an investigation made along that line, and have a law of that sort introduced and made a uniform law. Let it follow the course that the negotiable instruments law did.

THE CHAIRMAN: The Chair desires to announce that there will be a meeting of the executive committee of this section immediately after the adjournment of this meeting, to be held in the room at the Palace Hotel immediately adjoining the Maple Room.

A. V. HEELY, of the Farmers' Loan and Trust Company, New York: Mr. Chairman, before we adjourn, I am sure we all feel very much indebted to the gentlemen who have prepared papers and given us the benefit of them heré to-day, and I move that we extend a vote of thanks to those gentlemen.

The motion was seconded by Mr. Jackson, and unanimously adopted.

Upon motion, a vote of thanks was extended to the citizens of San Francisco for their cordial welcome and hospitality.

Upon motion, a vote of thanks was extended to the retiring officers.

Thereupon, at 12 o'clock M., the section adjourned.

MEETING OF THE EXECUTIVE COMMITTEE OF THE TRUST COMPANY SECTION.

The Committee met at 12:30 o'clock. Present, Messrs. Potter, Branch, Clark Williams, and Edward H. Reninger.

Upon motion, Clark Williams was chosen chairman of the committee.

The minutes of the last meeting were read by the secretary and, upon motion, approved.

Upon motion of Mr. Potter, James R. Branch was elected secretary of the Trust Company Section of the American Bankers' Association for the next year.

THE CHAIRMAN: Gentlemen, is there any further business?

Mr. Potter suggested that the important thing for the Committee to do is to interest men actively in the Trust Company Section work. He spoke

of the laws pertaining to estates and the administration of trusts, and how these laws vary in the different States, making it difficult and complex, sometimes, to know what to do.

Mr. Branch stated that there had been a committee working towards securing uniform laws, that this committee had been doing work along this line for five or six years, and had met with considerable success.

Suggestions were made by all the members of the Committee present in reference to the possibility of securing revision of the laws, and the securing of uniform laws relating to the business of trust companies.

Mr. Branch suggested that if a committee could be appointed, the chairman of whom would remain permanently as chairman, that much more could be accomplished than by having a chairman who would change every year.

Mr. Potter tendered his resignation as a member of the executive committee, for the reason that he had just been chosen vice-chairman of the Trust Company Section, and as such would be, *ex-officio*, a member of the executive committee.

Upon motion, A. A. Jackson, of the Girard Trust Company, Philadelphia, was elected to fill the vacancy on the executive committee caused by the resignation of Mr. Potter.

Thereupon, at 12:45, the committee adjourned, subject to the call of the secretary.

SAVINGS BANK SECTION.

The meeting of the section was called to order on October 20 by G. Byron Latimer, Secretary of the Irving Savings Institution, New York. The first business on the programme was the chairman's report.

G. BYRON LATIMER: Gentlemen—I am here as your presiding officer to-day not by right, but through force of circumstances. The Hon. Myron T. Herrick, your chairman, has been honored by the Republican nomination to the high office of Governor of the State of Ohio, and is at this time in the midst of his campaign and unable to be present. We shall all miss him from our meeting to-day, and were our by-laws not prohibitory I have no doubt that you would all welcome his reelection as your chairman.

Your vice-chairman, Mr. James McMahon, President of the Emigrant Industrial Savings Bank, New York, who is somewhat advanced in years and not in good health, found it impossible to travel so far; consequently, as chairman of your executive committee, I am here as your presiding officer. I ask your kind indulgence, as the requirements of speech-making are entirely out of my line.

(Mr. Latimer then read the following report of the executive committee.)

REPORT OF THE EXECUTIVE COMMITTEE.

At the meeting of the American Bankers' Association held in New Orleans last November an amendment was adopted to the by-laws establishing a Savings Bank Section similar in scope to the Trust Company Section, and in pursuance of that amendment an organization was effected and constitution and by-laws approved. Officers were elected, consisting of a chairman, vice-chairman and nine members of the executive committee, three each for one, two and three years respectively. The chairman, vice-chairman and three members of the executive committee retire to-day and their places will be filled by election later in the meeting.

Since our last meeting your executive committee, through its Secretary, Mr. Wm. Hanhart, has sent out circulars to each and every Savings Institution in the

United States, whether mutual or capitalized, outlining what the new section proposed to do and soliciting their co-operation. We have had a large number of replies and inquiries to our letters, and I believe to-day the American Bankers' Association numbers amongst its members over 500 Savings banks, including trust companies and banks having savings departments, many of them, no doubt, due in a great degree to this organization. I consider this a very good showing for the first year, and hope with your assistance to have that number materially increased during the succeeding year. We have had prepared by some of our members papers, which they will read, upon subjects of mutual interest; these papers will be printed in the report of this meeting and sent to each of our members, and many of us will have occasion to refer to them when questions which they cover come before us from time to time. It is the aim of the section to prepare for circulation such papers of mutual interest and to bring into closer relationship our banks and their affairs where subjects of mutual importance can be discussed.

It has always been a serious question to me why our Savings banks have so many different methods of doing precisely the same class of business; this is true in relation to our methods in the East, and perhaps our Western friends can help us in the right direction. We find it difficult to instruct our depositors upon simple subjects, when asked what this or that bank will require, under given circumstances; and if we could remedy only this small defect we would have accomplished a great deal, and this would tend to make our institutions more popular, if indeed that were possible.

The section has had from the association an appropriation of \$1,000, most of which has been used in postage, stationery, clerk hire, and typewriting; and I would suggest that a resolution be offered asking for a like amount for the coming year. If we hope for greater success we must keep our section prominently before all bank officers, and in the absence of personal interviews continue to circularize and write as during the past year.

G. BYRON LATIMER.

Chairman of the Executive Committee, Savings Bank Section.

Gentlemen, I thank you kindly for your attention and with your permission will proceed with the next order of business.

I would like to add, gentlemen, that we would like to have the co-operation of all the members in helping our association along. This is our first meeting, and I must confess that we have here a great many more than I expected to see. We are very thankful for your attendance, and now, with your permission, we will hear the report of the secretary, Mr. Hanhart.

SECRETARY'S REPORT.

Mr. Chairman and Gentlemen of the Savings Bank Section of the American Bankers' Association—As this is the first meeting of this section since its organization in New Orleans last fall, the secretary's report will of necessity be a brief one.

I respectfully report as follows:

The executive council of the American Bankers' Association, at its meeting last spring made to the section an expense appropriation of \$1,000; of this amount \$690.50 has been so far spent, for clerk hire, printing, stationery, postage, typewriting, etc., and the vouchers for this expenditure were audited by the chairman of the executive committee, and the amount paid.

Our membership now numbers 548, representing about one-half of the Savings banks in the United States.

The establishment of the section has been so unanimously well received everywhere, as evidenced by the large number of letters received from all parts of the country endorsing and approving of the organization, that I feel satisfied that we shall soon increase our membership so as to practically include all the Savings institutions in the United States. I beg to urge every one of you, gentlemen, to endeavor to attain this object by soliciting all the Savings institutions in your city and neighborhood to join the American Bankers' Association and enroll themselves in our ranks. I shall be glad to send blank forms of application to all who may desire to use them. Please explain to your friends that there is no additional expense involved in joining our section; the membership fee of the American Bankers' Association covers it all.

A few complaints have been received regarding the changed rate for membership, as adopted last year, but a few words of explanation have generally succeeded

in satisfying such; the fees now vary from \$5 to \$30 per annum, based on capital and surplus, and the banks having no capital pay on the amount of their surplus. Surely, even the highest fee of \$30 cannot be considered as excessive for a bank having over \$1,000,000 surplus, while the smaller banks pay less in proportion. The great advantages we derive from membership and through the support of the American Bankers' Association, the most powerful bankers' association in the world, are such that we should all willingly contribute these very reasonable membership fees.

WILLIAM HANHART, Secretary.

MR. TUTTLE, of Naugatuck, Conn.: I move that the report be accepted and placed on file.

The motion was duly seconded and carried.

THE CHAIRMAN: The next order of business is the discussion of practical questions and the reading of several papers of interest. I want to state that the first paper, "Some Thoughts on Bond Accounts," by Col. Chas. E. Sprague, President of the Union Dime Savings Bank, New York, will be read by Mr. G. Ad. Blaffer, Cashier of the Germania Savings Bank and Trust Company, New Orleans.

MR. BLAFFER: The paper prepared by Colonel Sprague, President of the Union Dime Savings Institution, of New York, is as follows:

**SOME THOUGHTS ON BOND ACCOUNTS.—ADDRESS OF CHARLES E. SPRAGUE,
PRESIDENT UNION DIME SAVINGS INSTITUTION, NEW YORK.**

As a Savings bank proper is purely an investment machine, the most important branch of its accountancy, next to depositors' accounts, is that of its interest-bearing securities. These are generally of two classes: (1) Real estate mortgages; (2) municipal or corporate indebtedness, usually spoken of as "bonds." From the facts that the physical security is directly available to the mortgagee in case of default and that the term is so short that readjustments of principal and rates of interest can be effected directly, the former class, real estate mortgages, require somewhat different treatment from the latter, in which the variance between the contractual and the market rate of interest frequently results in a premium or a discount. As either of these branches is a very large subject, I will confine myself in this paper to the securities known as "bonds."

SOME CHARACTERISTICS OF BONDS.

A bond is, generally speaking, a promise to pay a certain principal sum at a future date, and in the meantime to pay as interest certain periodical sums. Comparison of a large number of issues show the following tendencies:

The great majority of bonds are for a round sum of money, payable on the first day of some month, the interest being semi-annual and the maturity of the bond being also on an interest day. There are exceptions in every one of these particulars: some bonds are issued for odd dollars and cents, some bear annual or quarterly interest, some pay interest on the 2d, the 15th or the 25th of a month, some mature at a date not coincident with an interest date. It may be observed that these anomalies only hurt the marketability of the bonds and thus injure the borrower without any corresponding advantage. The most numerous bonds at present are four per cents., January and July.

FORM OF BOND LEDGERS.

The first point on which I wish to insist is that the bond ledger, or to use the official language of New York State, the "stock investments" ledger, should be in a specialized form calculated to afford on separate pages the most complete details as to each separate bond investment. The ordinary double-entry ledger is totally inadequate to contain the particulars required, though it will answer for an aggregate account showing in condensed form the total transactions of the kind. The ideal arrangement, in my opinion, is a general ledger of the broadest comprehensiveness, with subordinate ledgers of the most minute particularity. The two opposing demands of comprehensiveness and minuteness confront us in all broad-gauge bookkeeping and can only be met by a complex system of general and special ledgers or systems of accounts, the former giving statistical and the latter individual information.

THE TREATMENT OF INTEREST.

My next suggestion is as to the treatment of interest. I find that in many institutions no regard is paid to the accretion of interest or even its falling due, but it is considered null until it takes the form of cash. I cannot help considering this as not the most perfect way, for several reasons.

Interest revenue has three stages of transmigrations. It accrues from day to day, differing in that respect from dividends which operate instantaneously. Therefore, we have as the first stage accrued interest. This is a valid asset, as much so as the original debt. It is not yet enforceable, it is true, but that may also be affirmed of the original debt. As accrued interest is an indispensable part of every balance-sheet (barring the improbable case where everything has matured on the date of such balance-sheet), it should be recognized in the accounts and not as a mere adjustment. The entry "accrued interest Dr. to interest revenue," or words to that effect, may be made monthly, if the general ledger is on a monthly basis, or daily, if such is the basis; and then not only will the list of assets be correct, but the profit and loss account will be true. Otherwise it will appear as if in some months there was little or no revenue, merely because nothing happens to fall due, and the object of profit and loss accounts, that of gauging success or failure, would be completely lost.

The second stage is that of interest due, to which the interest accrued is transferred on the day of its maturity. If collected on that same day in cash, there will never be any balance on the account of interest due, but this ideal condition is seldom attained. Even if delay is rare, we need the account to chronicle the fact that there is a matured claim for interest outstanding in our favor.

The complete method is to keep accounts under some appropriate names, with interest accrued, interest due and interest revenue, the latter being a subdivision of profit and loss. The two former may without sacrifice of principle be united into one as interest receivable; but the point I am insisting on is that interest is earned progressively and should be so treated, not as if it were an adventitious gain or windfall, dropping in on the particular day when it takes the form of cash.

We are trustees for our depositors. A trustee making his accounting to a surrogate or judge of probate is always charged with the income which ought to be received, and if he has not collected it, must show good cause why not. Similarly, we should charge ourselves with the proper revenue and the charge should stand until disposed of in cash or otherwise.

In the foregoing remarks I have implied that the account of principal should be kept separate from that of interest, and this I deem the clearer and better way, while requiring no additional labor.

PREMIUMS AND DISCOUNTS ON BONDS PURCHASED.

I now come to a most important part of the subject, and one on which there may be considerable diversity of opinion. It is the question of how we shall represent the value of bonds purchased at prices above or below par; in other words, how to dispose of premiums and discounts. I am aware that many institutions of high standing state all their bonds at par. To do this they must necessarily have treated the sums paid for premiums as a loss or an expense and have taken them like other losses from the surplus. In fact, some of them publish with apparent pride the fact that "all premiums are at once charged to profit and loss." I observe that they do not say what becomes of discounts.

To discuss the matter fairly we must consider what this premium is. Why do we pay for a bond more than it calls for or why can we sometimes acquire it for less?

A premium is simply payment in advance for an abnormally high rate of interest, and a discount is compensation in advance for an abnormally low rate of interest. In both cases the compensation is spread over the time that the bond has still to run; it does not apply merely to the present day or the present half-year. By abnormal, I mean differing from the normal, the current, the fair rate of interest on that exact grade of security.

Suppose we desire to invest \$1,350 in the bonds of a certain city. We think that $3\frac{1}{2}$ per cent. per annum would be a fair income for that security. If the city would issue to us \$1,350 in its obligations bearing $3\frac{1}{2}$ per cent. interest, we would be willing to take it at par no matter what the length of time it had to run, even

supposing that all or part of the bonds were payable serially from year to year, say \$50 a year.

But suppose there are no $3\frac{1}{2}$ per cent. bonds to be had. There are, however, five per cents. to be had on a $3\frac{1}{2}$ per cent. basis and having forty-eight years, ten months and twenty-nine days to run. We find that our \$1,350 will just buy one of these bonds, \$1,000 to be paid at twenty-eight years, ten months, twenty-nine days from now, and in the meantime five per cent. interest to be paid, but the net income on the amount at any time invested will be $3\frac{1}{2}$ per cent.

In each of these supposed cases we have invested the same amount at the same rate of interest, principal to be repaid gradually in installments. But those who keep their books at par would say that in the former case \$1,350 was invested while in the latter only \$1,000 was invested, \$350 being lost or sunk. The latter investment, which is thus made to appear the worse, is, in fact, the better in the State of New York, which great Commonwealth, through erroneous economic ideas, taxes thrift, but exempts the \$350 if paid in the form of premium, taxing it if it is styled principal.

To reduce bonds as soon as purchased to par by artificially treating premiums as losses and discounts as profits may be an easy process, but that seems to me its only recommendation.

To endeavor to follow the market value from time to time, as many public reports require, is also objectionable for the following reasons:

1. It is based not upon facts, but upon opinions. The investment securities in question are not so continuously dealt in publicly as to be quotable like produce or poultry. Even in active stocks and bonds it is well known that published quotations are not reliable. The appraisals of the same list of securities by two different brokers, each intending conscientiously to give the market price, will sometimes, as most of us know from experience, reveal a discrepancy running into the hundreds of thousands.

2. Besides the uncertainty of market values and their unreliability, they introduce into the profit and loss account and into the estimated margin for dividends an element of chance and fluctuation, which has no place among the actual earnings and outlay, and which vitiates the result. The increase and decrease of surplus is meaningless when it may have been produced by a purely abstract marking up and marking down of the same securities, in which there was not the slightest real change. This is not profit and loss.

Even if we were treating our securities as merchandise bought at one price to sell at another, it would not be good bookkeeping to consider profits made until realized. The only way to make a profit is by selling; no merchant ever got rich by marking up his inventory.

Again, the original cost, while it should be preserved of record, is, as a basis of accounting, equally fallacious with par. The one is in the past tense, what we have paid; the other is in the future, what we shall receive, while the market value is in the potential mood, what we might, could or would receive or pay. None of these represents the actuality, or answers the question, "what is the true numerical representative, in terms of money, at the present moment, of the securities in which we have invested our deposits?"

The only answer I can give after long study of the subject is the amortized value, or the original cost, written up or down, as the case may be, to date, in such a way that upon reaching maturity it will exactly stand at par.

When a bond is purchased at a premium or a discount, the consequence is that it will constantly pay a rate of income less or greater than that named in the bond, on the amount remaining invested, not on par. And applying this principle, there will be found a series of values which I call the amortized values, or the present worth of principal and interest at the net-income rate.

Suppose, for example, a \$1,000 five per cent. bond, interest semi-annually, eighteen years to run, is offered you for \$1,199.07. You look in the convenient little book of tables and see that at this rate the net income will be $3\frac{1}{2}$ per cent. on the amount invested. If you think that is a fair rate, you buy the bond and the amount invested is exactly \$1,199.07, not \$1,000 at all. Six months pass by and \$25 interest falls due. But is this all income? No, for the interest on \$1,199.07, at $3\frac{1}{2}$ per cent., is only \$20.98. What, then, is the remaining \$4.02? It is simply a part of your \$199.07, your premium refunded to you, making the present amount only \$1,195.05, and the little book will again corroborate this as the true value at $17\frac{1}{2}$ years. After six months more the \$25 will be divided a little differently, \$20.91 being income and \$4.09 being a second repayment of premium. Continuing this process, the last installment of the premium is repaid out of the last interest.

Another way of looking at it is this: Here is a coupon bond of \$1,000, with thirty-six coupons attached. These are just as much promises to pay as the bond itself. Hence there are thirty-seven future sums receivable, one big one represented by the big engraving, \$1,000 payable in eighteen years, and thirty-six little promises of \$25 each at various dates six months apart. The \$1,000 discounted at 3½ per cent. compound is worth now only \$535.50. The coupons are worth various amounts from \$24.57 for the first coupon down to \$13.39 for the last one, in all \$663.57; making the total value of the big promises and the little ones \$1,199.07. The same calculation applied at the next period gives the value \$1,195.05, showing the same repayment or amortization of \$4.02.

The account of premiums and discounts may be kept separate from that of par if preferred, and this I regard as entirely correct. What I object to is the practice of annulling the premiums and discounts and treating them as non-existent.

In the institution with which I am connected we have in the general ledger an account for the par and a separate one for premiums; the sum of the two always gives the book value or amortized value. In the special ledger for bonds, known as the "stock investments ledger," we adopt the other plan and use four columns; par, original cost, book value, and market value. The latter is not a bookkeeping figure, but a mere memorandum for future reference. The four columns are the ones required by the Bank Department of our State for its reports.

Our stock investments ledger is of the loose-sheet kind and each lot of securities has devoted to it two pages of different tints, one for principal and the other for interest. The "principal" page is kept by addition and subtraction, and is headed by a descriptive form in detail. The "interest" page has the interest dates printed in advance for many years, sheets having been printed for each variation "JJ," "FA," "MS," "AO," "MN," or "JD," and the proper ones being selected when the account is opened. Each "JJ" sheet has an index-tab near the top, the "FA" a little lower, and so on, so that the pages for any interest-date may be readily found.

Successive Values of a Bond for \$1,000,000. Interest Five Per Cent. Per Annum, Payable Semi-Annually; Purchased on a Three and One-Half Per Cent. Basis.

PERIODS ENDING	Interest at 5½.	Net income at 3½.	Amortisation.	Book value.
1900, Dec. 31.....	Cost.	\$1,199,070.65

	\$900,000	\$700,929.35	\$199,070.65

The accounts are arranged in classes, first United States bonds, then bonds of the several States, then bonds of cities in other States, then cities, counties, towns, villages, and school districts within the State, and finally railroad mortgage bonds, bringing the information into the exact order required by the State Superintendent of Banks for his report.

Recurring to the question of valuation, I am of the opinion that the amortized value, or the present worth of principal and interest at the net-income rate, should not only be adopted in our bookkeeping, but should be the legal standard and the normal basis for estimating surplus in all official and public statements.

THE CHAIRMAN: Gentlemen, it was the intention to have these papers discussed, but inasmuch as the paper just read by Mr. Blaffer was not read by the gentleman who wrote it, I think it would be quite out of the question to enter into a discussion of the subject just now.

We have a paper upon Savings Bank Advertising, prepared by Mr. Lucius Teter, Cashier of the Chicago Savings Bank, Chicago, and it will be read by Mr. Joseph E. Otis, Vice-President of that institution.

SAVINGS BANK ADVERTISING.—ADDRESS OF LUCIUS TETER, CASHIER CHICAGO SAVINGS BANK.

It is not my thought in this brief paper to handle the question of Savings bank advertising in an exhaustive manner, but rather to speak in a general way concerning the subject, and to mention a few ideas that have been of value to me.

It is well to let one officer of the bank take the supervision of all advertising, having, of course, the counsel of his associates, for nowadays there are so many plans offered, all calling for the expenditure of money, that it really requires the careful attention of one man to direct a fixed policy and prevent the scattering of much money into channels other than the ones in which your real effort lies, for all good advertising is good, but some kinds are better than others.

SAVINGS BANKS SHOULD ADVERTISE.

We will pass quickly over the question as to whether you ought to advertise, although, let me say, in a general way, that Savings banks should advertise and in most cases must advertise to enable them long to continue a steady growth.

It is also true that all Savings banks in the United States cannot advertise alike, but in every case a dignified effort should be made to inform the public of a readiness, a willingness, and an ability to care for the funds of the people. I say dignified, because I do not believe that a Savings bank should ever use cheap, funny or prize-package schemes for obtaining depositors, or in any way employ methods that could be misunderstood, for our trust is great. The public feels that it is, and is quick to see anything that savors of disrespect or a mere trade attitude in the matter of caring for those funds which, after all, represent secretions, large or small, from the lives of our fellow men.

On the other hand, don't publish a list of your directors in the local paper or put a card in the church calendar and a picnic programme and let it go at that. Rather carry out a definite policy of publicity, manfully telling the people who you are, where you are and what you can do for them.

METHODS TO BE AVOIDED.

Many of us make a mistake, it seems to me, of either scolding or preaching in our advertising. Compiling figures on how much the individual would profit by smoking no cigars or by staying away from the theatre, seems too personal and is not expected of us. I also feel that the time-honored dollar that accumulated so much interest in twenty-five years has been spent somewhere along the road; at any rate, it now seems to have lost much force as an argument, and indeed it was a long time to wait for so little.

SETTING FORTH THE ADVANTAGES OF A SAVINGS BANK.

As a rule we must take the man who wants to save and tell him how; for, after all, we don't get many unwilling savers upon our books. Modestly tell your man about the strength of your bank, who are its officers, trustees or directors; tell him of its convenient location and hours; tell him that he can secure a bank book by making a deposit of \$1 on which a fair rate of interest will be paid; tell

him that you are willing to advise him at any time about his business affairs; tell him that when he needs all or part of his money you will have it for him. All these things he wants to know and likes to have you tell him.

In making a choice of the mediums to be used in reaching your man, you must consider the conditions in your own particular locality. Newspaper advertising is good, and I would advise that a part of every advertising appropriation be used in this way. In selecting newspapers for savings advertising, don't select one because it has the best financial circulation, but use those that circulate most largely among the general public.

However, the great expense of newspaper advertising, and the number of advertisers, especially in the large cities, creates a condition that leaves much to be desired; besides that, you will want to get nearer to your prospective depositors than you can in that way. A booklet, brief and direct in its simple statements, furnishes the foundation for personal effort, either in your banking office or outside.

Let one of your officers, or a representative, call upon the employers of labor in the neighborhood tributary to your bank asking their co-operation in bringing the matter of savings to the attention of their people. As a rule you can obtain their support, as all right-minded men want their employees to save.

Ask them to use pay-envelopes furnished by you and bearing your message printed upon the face. Put up a neatly-framed sign of your bank in their work-shops, and secure from the company or firm a list of the names of their employees—these names you can transfer to a card-system for use later on in sending out booklets and personal letters.

Make an occasional visit to see that your signs are up and that you are not forgotten; before long you will have depositors from this shop who become centres for more growth later on.

Seek the active support of your depositors. Our bank always writes a personal letter to each new depositor, acknowledging that our officers are glad to have him with us, and while offering him a welcome and the use of our services, we suggest that we would be glad to have him mention us to his friends.

These and many other plans will suggest themselves to you, some no doubt having been offered to you many times. But in closing let me emphasize this: secure and keep the good will of your depositors; that is the greatest of all advertisements; without it none is of avail. Give them every possible help and comfort in transacting their business; if many people in the community cannot conveniently visit a bank during your regular hours, keep open one evening a week for the savers. It is not undignified to give a needed service.

COURTEOUS TREATMENT OF DEPOSITORS.

Require your employees to be absolutely courteous to everyone, particularly to the ignorant. If your tellers haven't time to care for them, have enough officers to see to it that every person is well treated and if possible made to feel so. The pleased ones will soon circulate the report that your bank is not run by a lot of unsympathetic aristocrats, but by plain, every-day men like themselves. Wait on your depositors as promptly as possible; let your savings system be as simple as is consistent with safety.

Maintain at all times a sense of your obligation to the public, and certainly moderate success will be yours. Should great success not attend you, you can feel that after all the greatest things are included in gaining the respect of men and of your own conscience.

THE CHAIRMAN: We will now listen to a paper on "Dangers Threatening Savings Banks," by Fred Heinz, President of the Farmers and Mechanics' Savings Bank, Davenport, Ia.

THE DANGERS THREATENING THE SAVINGS BANKS.—ADDRESS OF FRED HEINZ, PRESIDENT FARMERS AND MECHANICS' SAVINGS BANK, DAVENPORT, IOWA.

At present the Savings banks throughout the country are in a prosperous condition; no doubt it is the aim of all interested that they should be kept so.

The dangers that threaten the Savings banks in common with other banks are inefficiency and sometimes dishonesty in the management by those in charge on the inside, and occasionally efficiency by the non-employees in getting at the funds from the outside.

In addition to this all the Savings banks are threatened with a greater danger, that of losing deposits on account of Government Savings banks should such be established; the agitation for Government Savings banks is considerable, and should ordinary Savings banks fail to any great number, it would no doubt hasten the establishment of Government Savings banks. The main argument in favor of a Government Savings bank is that it absolutely protects the deposits. There are, however, many objectionable features.

SAFEGUARDING DEPOSITS IN SAVINGS BANKS.

To keep the present Savings banks in popular favor it is absolutely necessary that the greatest safeguards be provided for the safety of the deposits. When this is done the cry for a Government Savings bank will cease, otherwise not.

No doubt the best part of a Savings bank is that loans be good and kept good. Many States have laws fixing the kind of collaterals that Savings banks can invest in; for instance, the Iowa law permits investment in real estate mortgages on property located in the State, Government bonds, and bonds, warrants, and evidences of debt issued in the State, and may make loans upon commercial paper, notes, bills of exchange, drafts, or any other personal or public security, but not on the bank's own stock. The general drift of this Iowa idea is that the securities be local securities, and that is the rule also in many other States, and it is no doubt a good one, for the closer the borrower is to the lender the easier it is to look after the securities.

The Iowa Savings bank law is modeled after the National Bank Act. Among other safeguards we have examination by a State Bank Examiner, and the law originally provided that the bank could not take more deposits than ten times its capital stock. Now this has been changed to twenty times its capital stock and surplus, hence when the bank has deposits up to the limit the security of the depositors is not so good as it was before. This, I believe, is wrong. All laws should be made to give the public as abundant security for their money as a safe and conservative banking business will justify.

The investments of the Savings bank should be of such a character that there be no shrinkage of the principal, and in such shape that they can be disposed of in case of need within a reasonable time.

A MODEL SAVINGS BANK LAW.

It would be well to have good Savings bank laws enacted in every State of the Union. In most of its features the laws of the various States might be identical, although that would not be so necessary as the uniform law on commercial paper which travels over many States, while the Savings bank paper is usually local in its character.

It might be well to have a committee appointed by this body to get all the statutes of the various United States together and from them and other sources form a bill that can act as a model for the Legislatures of the various States.

Such a bill wherever enacted by the lawmakers would add to the popularity of the Savings bank.

And I, therefore, move, Mr. Chairman, the adoption of the following resolution:

"Resolved, That the chairman appoint a committee of three members, who are to produce the complete statutory enactments referring to Savings banks of the various States of the Union, and that thereafter the said committee, after receiving suggestions from those interested, proceed to prepare such a bill as, in their opinion, would be proper and suitable for adoption in every State of the Union, and that when so prepared the same be submitted to the next annual convention of this body for further action.

The motion was duly seconded, and was adopted.

Thereupon, the chairman appointed the following committee: Fred Heinz, President Farmers and Mechanics' Savings Bank, Davenport, Ia.; E. J. Parker, Cashier State Savings, Loan and Trust Company, Quincy, Ill., and W. C. Laycock, Cashier of the Anthracite Savings Bank, Wilkesbarre, Pa.

THE CHAIRMAN: The next paper is entitled Trust Accounts in Savings Banks, by Mr. William Hanhart, of New York city.

TRUST ACCOUNTS IN SAVINGS BANKS.—ADDRESS OF WM. HANHART, OF
NEW YORK.

The subject of the so-called "trust accounts" in Savings banks has always been a difficult one to handle. The matter is apparently a little intricate; the usages of Savings banks differ greatly, and so does their experience, and it is with the desire of somewhat clearing up the matter that I venture to state in as brief a manner as possible, and in a general way, the governing principles underlying the subject, with the hope that by giving the views of an experienced bank officer I may draw out the opinions and experiences of others, older in the business, and with a better understanding, and more competent to reason the subject out. That wonderful collection of wise saws, Solomon's Book of Proverbs, says: "In the multitude of counsellors there is safety," and indeed it might be added, there is also wisdom, and I should much like to hear the opinions of others, feeling satisfied that a free and full discussion will prove of benefit to us all; it may be as well to state that I don't mind one bit being interrupted, and if what I shall say does not appear to you correct, or clear, please say so, bearing in mind that I am no lawyer, but merely a plain, every-day sort of a layman.

To begin with, it must be understood that I address myself only to Savings institutions, both mutual and capitalized, doing a real Savings bank business, and not to Savings institutions that are especially empowered by their charter, or by the laws of their State, to accept and carry out trusts; the latter have trust officers and also counsel to advise them in all cases. I am but a layman, speaking to Savings institutions who accept deposits of trusts, or in trust, mainly as depositories of the funds, and acting under the common law generally recognized throughout the United States; and, therefore, I do not take into account the special conditions or modifications, if any, that may be imposed upon them by the statute law of their respective States; only a few States, however, have special laws governing such Savings banks accounts.

TRUST ACCOUNTS DEFINED.

In the first instance, let us consider what accounts are usually called trust accounts. They may be broadly stated as all accounts that are opened, or transferred, not simply in the name of one depositor, but having attached to them some qualifying clause; such as in trust for another, or for another, or opened in several names, or in the name of a society or corporation, or payable in a certain contingency, etc., etc.; in short, all accounts that are not simply in the name of one depositor. For the purpose of clearness I will divide them in six parts, viz.:

- 1st. Accounts opened by one person for another, or in trust for another.
- 2d. Joint accounts.
- 3d. Alternative joint accounts.
- 4th. Accounts of administrators, executors, guardians, etc.
- 5th. Accounts payable in a given event, or subject to special conditions or limitations.
- 6th. Society or corporation accounts.

I will now proceed to discuss these several divisions.

The accounts opened by one person, called the trustee, in trust or for another person, called the beneficiary, or *cestui que trust*, are the most common form of trust accounts and the only ones justly entitled to be called trust accounts; the practice of Savings banks differs considerably in handling them, the most usual way being to allow the trustee control of the fund during his lifetime, and if the account is still open at his death to pay the remaining balance to the beneficiary, or *cestui que trust*; in a large majority of cases, they are bona-fide accounts, opened by thrifty depositors, who desire that in the event of their death their wife, or husband, or child, or some near relative, shall receive certain sums without incurring the expense of engaging lawyers, paying surrogate or probate fees, etc., etc. The amounts are usually small, and in most cases the recipients can ill afford the time and money needed to probate a will or petition for the appointment of an administrator. It has been said that it is not the business of a Savings bank to make the will of a depositor, but I fail to see any serious objection to it as long as this so-called will disposes only of money deposited in the bank, representing the savings of thrifty, hard-working people, who will not bother with lawyers, and will make no will. However, it may be said, in a general way, that these accounts cannot be usually considered as legal and valid trusts, but that they are voluntary trusts, the trustee when opening the account stating that he intends it for the

benefit of a certain person, the cestui que trust; he keeps full control of the account during his lifetime, and this is correct, as the quality of a trust is that the trustee does not part with the property, but keeps it under his control; at his death, the fund, or whatever balance there is left, is to be paid to the beneficiary named.

RULES GOVERNING TRUST ACCOUNTS.

In the absence of other notice, these accounts may be considered as constructive trusts, and in some respects they may also be likened to a gift *causa mortis*, but with this difference: that in the latter case the donor must die of his then-existing sickness to render the gift valid; with this exception, they are very similar to them, and, like them, require a witness, and in these accounts the bank is the witness. As a matter of fact, if the matter is brought up for judicial decision, it will be found that the intent of the depositor at the time of deposit governs, and that all the surroundings, facts, circumstances, and declarations will be taken into consideration; whether the trustee made the deposit a gift *inter vivos* with himself as the self-constituted trustee, the bank knows not; the consensus of legal decisions appears to be that something more than the mere opening of an account for another, or in trust for another, is necessary to make the deposit an actual gift, that is, either a gift of the bank book to the cestui que trust, or some act or declaration to show the intention of the trustee; to infer a gift from the form of the deposit only is not usually considered sufficient. So far as the bank is concerned, when at the death of the trustee the cestui que trust presents the bank book and demands payment, the bank may well understand that the gift has been completed and that it is authorized to pay him.

In some States the statute law recognizes and regulates these accounts; for instance, in my own State of New York, the Savings bank law permits the funds to be paid to the cestui que trust at the death of the trustee; in the absence of notice in writing of the existence of a legal and valid trust. This obviates the necessity, which otherwise would exist, of applying to the supreme court for the appointment of another trustee; as it is a principle of the law that a trust is not impaired by the death of the trustee. Common law, however, usually governs these cases, and generally speaking it may be said that a fund left voluntarily in trust by one person for another person, and without any further notice, may be paid to that person at the death of the self-constituted trustee, and so far as the bank is interested, it is quite safe for it to do so, and that it is carrying out the intention of the depositor as stated by him when opening the account.

PAYMENT IN CASE OF DEATH OF TRUSTEE.

It sometimes happens that at the death of the trustee his legal representative presents the bank book and demands payment; in such cases, whenever possible, endeavor to obtain the receipt of the cestui que trust in addition to that of such legal representative; but if found impracticable, a payment to this legal representative, in the absence of adverse notice, is lawful, as it has been decided that the bank has no right to enquire into the character of the trust, and owes no duty to the beneficiary, until the latter, by notice, or forbidding payment, or demanding it for himself, created on the part of the bank such right and duty. However, experience has repeatedly shown that payment to the cestui que trust is best and safest, for it often happens that after payment is made to the legal representative of the trustee, at some future time the cestui que trust hears of the existence of the account, and then he promptly sues the bank; of course the bank has a valid defence; but all this is avoided when payment is made to the cestui que trust.

In some cases the cestui que trust is fictitious, the deposits having been made in the form of a trust account so as to benefit from the higher rate of interest allowed by some banks on smaller deposits, or to avoid the legal or fixed limit of deposit; this need occasion no worry, although, of course, such accounts should not knowingly be accepted and are not desirable; but if they are opened, in the event of the death of the so-called trustee, a payment to his legal representative is absolutely safe and lawful, as there naturally can be no adverse claim from the imaginary cestui que trust.

DEATH OF THE TRUSTEE OR BENEFICIARY.

Another contingency is the death of both the trustee and the cestui que trust whilst the account stands open; if the latter died first, it may well be considered that the trust is extinct, being a personal one, and payment may be made to the legal representative of the trustee on presentation of the bank book; if the trustee

died first, payment should then be made to the legal representative of the cestui que trust.

It may also happen that the cestui que trust finds out, at the death of the trustee, that the fund originally deposited in trust for him has been withdrawn by the trustee previous to the latter's death; he then sues the trustee's estate for the amount, and sometimes the bank also; but I need hardly say that the bank has a perfectly valid defence. It may be said, in a general way, that the bank knows nothing as to the equities between the trustee and the cestui que trust, and is simply acting as a depository of the funds of the depositor, agreeing with him that at his death, in the absence of adverse claim, it will pay whatever balance remains, on the demand of the beneficiary. Regarding the form of these accounts, I advise that they be opened simply in this way: "John Brown for son James," avoiding the use of the word trust; the bank not being empowered to carry out trusts, and acting only as a depository of the funds, with a simple, possible, contingency, out of abundant caution avoid even using the word trust; in the same line of caution do not transfer such trust accounts from one beneficiary to another, or to another account, but let the trustee withdraw the deposit and close the account, and then, if he chooses, he may open another account in trust for some other person, or in any other acceptable way.

Accounts are sometimes opened thus: "John Brown in trust for his children," or "John Brown in trust for his children, Mary, Jane, and James." These accounts should be refused, as the omission of the names of the children may give trouble in case of children born after the date of opening the account, or in case of deceased children leaving descendants; at all events, not more than one beneficiary should be named, as the death of one of several named beneficiaries may complicate matters considerably; better give John Brown several books, one for each of his children, for whatever amount he desires him or her to receive.

Avoid also opening accounts with two trustees, such as "John Brown and wife Mary for dau. Jane"; or "John Brown or wife Mary in trust for dau. Jane." It will surely lead to unwelcome complications. Do not open such accounts as "John Brown trustee," or "John Brown in trust," without naming the beneficiary; in short, let all trust accounts, such as we have been discussing, be opened simply by one person, or trustee, for one other person.

In Great Britain it is permitted by law to the depositor, when opening his account, to designate the person to whom he desires the balance to be paid in the event of his death, and he may change the beneficiary at will; but I understand that this method would conflict with the laws of the different States here, and is in fact impracticable.

To resume the whole subject, I will state that in my opinion, Savings banks accounts opened by one person for, or in trust for, another, may at any time be withdrawn by the trustee, and in the event of the death of the latter the remaining balance, if any, should and may safely be paid to the cestui que trust on presentation of the bank book and in the absence of adverse claim; but if the cestui que trust is not to be found, or does not exist, and the legal representative of the trustee presents the bank book, payment may be made to him in the absence of adverse demand.

FORMS OF JOINT ACCOUNTS.

Joint accounts, such as "John Brown and Tom Jones," subject to withdrawal only on receipts signed by both parties, are opened by some Savings banks, but I have always considered them unsatisfactory to both the bank and the depositors, and experience has proved them to be dangerous, because in the event of the death of one of the parties the question invariably arises, may the bank pay on the receipt of the one surviving depositor? To whom did the fund really belong? Of course, payment may be refused and a settlement waited for through the courts, but this is not advisable in any event, and for years past many of the progressive banks have refused to open such accounts; they are not safe to the bank, and often become a source of contention, lawsuits, and quarrels among the depositors, and I advise refusing them altogether.

We now come to the alternative joint accounts, such as "John Brown or wife Mary," the agreement of the bank being to pay either one of these depositors on presentation of the bank book. Such accounts I consider as safe to the bank, and without doubt they are very useful and helpful to the depositors. In the majority of cases they are opened jointly by near relatives, such as husband and wife, mother and daughter, sisters, etc., etc., who clearly and easily understand that any one of them may withdraw the funds, and also that the death of either does not inter-

fere with the account in so far as that the survivor may withdraw or transfer the balance. The bank takes no account of and ignores the death of one of the depositors, as the survivor is sufficient to withdraw, and in the event of the death of both depositors whilst the account is still open, and in the absence of adverse claim, payment to the legal representative of the last survivor is correct and lawful. Depositors of such accounts may be legally termed joint tenants, the fund being payable to either one of them or to the survivor; and indeed I know of one Savings bank who entitles these accounts on the bank books in this fashion: "John Brown and Mary Brown, joint tenants, payable to either on presentation of the book, or survivor." This seems very comprehensive.

It is well for us to bear in mind that deposits in the alternative form represent usually the joint total savings of poor and thrifty people, who think it useless to make a will, and will not employ lawyers; they understand that the survivor takes, and I consider the bank is quite safe in such accounts. The Savings institutions to whom this is addressed, have for their principal object the providing of safe depositories for the comparatively small savings of the frugal and thrifty, and they should provide their patrons with all possible conveniences, within the bounds of safety, for the handling of as well as for the disposing of such small savings.

ACCOUNTS OF EXECUTORS, ADMINISTRATORS, GUARDIANS, ETC.

Before discussing the accounts of executors, administrators, guardians, etc., I must repeat that I am addressing only banks acting as depositories of the funds, and making no undertaking as to carrying out the trust; with this understanding, I will now proceed.

Executors' accounts should always be opened in the name of the estate, whether they be new accounts or transferred from the account of a deceased depositor, and power should be given to the executor to make withdrawals; as a general rule, when several executors are named, the receipt of any one of them who has qualified is sufficient to bind the estate. In the event of the death of the executor, the only safe course for the bank is to pay on letters of administration cum testamento annexo; that is, with the will annexed. Payment under similar circumstances has been made to the legal representative of the executor and has been upheld in some courts; but I would advise against it, as it may involve the bank in litigation, whilst payment to a legal representative of the estate, presenting the bank book, is always lawful and the safest way.

The above remarks apply to administrators' accounts, except that if several administrators are named, it is safer to pay only on the joint receipt of them all. In the event of the death of the administrator you should require the appointment of an administrator de bonis non on the estate, and pay him only.

Guardian accounts should be opened or transferred in the name of the guardian, stating the minor's name. In the event of the death of the guardian it is well to require that a new guardian be regularly appointed, unless the minor has, in the meantime, reached his majority, when payment may be safely made to him, or her, as guardianship ceases *ipso facto* when majority is reached. If the amount is small, and no new guardian is appointed, it is often found convenient and advisable to wait until the minor is of age, when the payment made to him becomes legal. If the account is opened by, or in the name of, a minor, payment to such minor at any time is legal in most of the States.

The papers appointing a committee or guardian in lunacy should be closely scrutinized, and proof shown of the filing of a sufficient bond. The laws of the several States vary considerably on this subject, but we must not lose sight of the fact that in this blessed land of ours no man may be deprived of his property without due process of law, and it is well for us to see, before transferring a lunatic's account to his committee, that all the proceedings were regularly conducted. Some States have special commissions in lunacy, which simplify matters considerably, but as a general rule I will say that Savings banks not authorized to undertake trusts are better off without such accounts, which properly belong to trust companies. If they are only transfers from the accounts of depositors who have become insane, they are justifiable, but the bank must use its best endeavors in protecting the interests of such unfortunate depositors.

Letters of administration or testamentary granted in another State, or abroad, are of no force in your own sovereign State. In such cases, at the death of the depositor, ancillary letters should be required. Many banks, however, will pay if the foreign administrator or executor assigns his claim and interest to a person residing in the State where the funds are. Payment to such assignee is usually considered

safe, for the reason that a payment made to a foreign administrator or executor, not being enforceable, is a voluntary one, and is no defence to the bank, whilst a payment made to his assignee resident of the State may be considered as not voluntary, because this resident may enforce his claim through the courts, and therefore, everything else being correct, this payment becomes a lawful one.

Accounts payable in certain contingencies, such as to date of payment, or subject to any special limitations as to payment of principal or interest, are not desirable, and I advise all Savings banks not specially authorized to carry out trusts to refuse them; they involve a risk and responsibility foreign to their business, and should be turned over to the trust companies who are especially empowered to act in such cases.

SOCIETY ACCOUNTS.

The practice of Savings banks differs widely as to Society accounts, many refusing them altogether. There is no denying the fact that they are occasionally troublesome, because of dissensions of the society, or among its officers, but with reasonable care I believe that they may be safely opened.

These accounts are usually those of charitable, benevolent, religious or fraternal associations, lodges or councils, and sometimes of pleasure or social clubs; some banks require the signatures of a given number or a majority of trustees; others require the production of the by-laws showing authority of trustees or officers to make withdrawals, but many of these societies, have no printed by-laws at all and are not incorporated. I advise opening all such accounts in the name of the society, and make them subject to the draft of a designated officer. When opening the account, an extract from the minutes of a general meeting should be presented, attested by the President and Secretary, giving the resolution empowering the designated officer, until further orders, to deposit and withdraw from the bank the funds of the society. If there is a seal, keep an impression of it and require it on all drafts, notices, etc., as additional security. When a change of officers occurs through death, resignation, or election of successors, require a certified copy of an extract of the minutes of the meeting giving signatures of newly authorized officers. A blank form of authorization, drafted by the bank, should be used.

SERVICES THE BANKS SHOULD RENDER THEIR DEPOSITORS.

And now to resume and conclude this long discussion, I will state that within reasonable limits, and subject to the special laws of each State, Savings banks who exist primarily for the accommodations of the thrifty poor, the industrious and careful mechanic, artisan and clerk, for the women and children, and for all who are desirous of improving their condition and safeguarding their future, I say that Savings banks should use their best endeavors to accommodate their depositors and encourage them in their saving habits. As a rule these depositors know nothing as to the law, cannot afford to employ lawyers, and they place their reliance on their friendly Savings bank, expecting it to carry out their wishes. Some of the older Eastern Savings banks have become so conservative that they refuse accounts other than those opened in the name of one person, on the ground that all others give trouble and involve risk; but, it may be asked, is it possible for us to receive deposits, loan and invest, and make payments, without incurring some risk? We shall always have some trouble in business, but as long as we adopt simple and reasonably safe rules for the conduct of our business, exercise vigilance, wisdom and good common sense in handling accounts, I believe that the risks are comparatively small, and only such as are incident to any business of this character. I would caution my friends, fellow officers of Savings banks, against turning over to their lawyers the settlement of their trust accounts; confer with your lawyers from time to time, get clear ideas of the laws of your State, watch the decisions of your highest court (the lower court's judgments in Savings bank cases are often extraordinary and conflicting), and then make up your mind and decide as to the best course to follow. Personally I have great liking and respect for lawyers, and occasions will arise when you will be glad to have a good one to take up a case for you, but I earnestly advise especially the younger Savings bank officers to themselves study the banking law, watch legal decisions, frequently confer with other Savings bank officers, in short, to fit themselves to handle intelligently and successfully the increasing business that will surely come to the progressive Savings institutions who desire to accommodate their depositors by opening for them these so-called trust accounts.

Legally the relation between the Savings bank and its depositor is that of debtor and creditor, but morally we may well consider ourselves as trustees, and as such bound to act as the best friends of our depositors, as well as their bankers. We must realize their limitations, help them in all that is safe and practicable, and inspire them with a feeling of friendliness with the bank as well as a knowledge of the safety of their savings. By doing so we shall carry out the purpose to which the majority of us owe our corporate existence, and that is the furthering of our magnificent system of Savings banks, self-educating and helpful, a maker of character and good citizenship, unequalled in all the world, and having now in its care over \$3,000,000,000 of the savings of our hard-working, thrifty, and enterprising people.

THE CHAIRMAN: The next paper is entitled *Savings Banks That Have Failed*, by Mr. Willis S. Paine, President Consolidated National Bank of New York, and the address, in the absence of Mr. Paine, will be read by Mr. James Thorne, Assistant Cashier of the Consolidated National Bank, of New York city.

SAVINGS BANKS THAT HAVE FAILED.—ADDRESS OF HON. WILLIS S. PAINE, PRESIDENT CONSOLIDATED NATIONAL BANK, NEW YORK.

Savings banks are a latter-day institution. This fact is evidence that in the development of the world's civilization the moral and material keep each other company and progress to a common end. The countries that are developing material prosperity witness the growth of benevolent institutions among their people—institutions for the care and comfort of the dependent and the housing the great army of incapables.

SAVINGS BANKS ARE BENEFICENT INSTITUTIONS.

Any institution that encourages frugality and provides means for the safe-keeping of savings serves a better purpose, in inducing provision for the future, than do almshouses for the improvident. Viewed in this light, Savings banks cannot fail to be regarded as among the most beneficent of our modern institutions. I venture to express the conviction that however the people of the State may desire to accumulate, by securing large returns, for the use of their money, those people sadly miss it who do not lay up in the present as against the inevitable future. That State misses it which fails to provide for this purpose by establishing Savings institutions for the encouragement of thrift, where savings may be deposited in security, and the laborer may, when the years have gone by and the hand has lost its cunning, have recourse to a fund provided through sacrifice, and which the inducements of the well-managed Savings bank have enabled him to accumulate.

STRENGTH OF THE SAVINGS BANKS.

The recent wonderful development of our country has made us as a nation optimistic, yet the experience of the past, with its failures, should not be forgotten. Rightly utilized they should give us accurate judgment in place of a cheery expectancy born of desire. And here let me say that with some exceptions and because of the very character of those exceptions, the broad claim that our mutual or non-capitalized Savings banks are to-day the strongest corporations, in a comparative sense, of all the financial institutions of our land, is fully substantiated.

It may be thought a strong statement to say that directors of Savings banks should be held to the strict accountability of individual trusteeship. We admit that Savings banks are corporations, and this would seem to absolve individual responsibility as incorporation usually does. But reflection will show that this peculiar and individual trusteeship, and its resulting duties, is a verity.

When I became the Receiver of the Bond Street Savings Bank, of New York city, this rule was emphasized in the litigation against the trustees of that institution, and it was held that a Savings bank was itself a trustee; that its function was the receiving of deposits and the investment of them for the use of the depositor, and that every transaction of the Savings bank was made under fiduciary responsibility. This in substance was the opinion of the able referee, Clifford A. Hand, who tried the case in the first instance. When he made this ruling it was considered by the bar one of striking force and novelty.

INJUSTICE OF TAXING SAVINGS BANKS.

It was this general rule of trust relation of Savings institutions, as well as the innate justice of the ruling, that, at the meeting of this Savings Banks Section last year at New Orleans, induced me to oppose the latter-day tendency to tax Savings banks deposits. Considering that Savings banks represent the frugalities of a people; considering, too, that these people form a part of the great multitude who pay the bulk of indirect taxation; and considering that they are conducted for the public good and not for corporate or personal aggrandizement, it seems only just that they should be freed from the burden of taxation by the State, as is the case with other beneficent institutions.

To tax the deposits of Savings institutions is to discourage the placing by wage-earners of their gains with such corporations. Not only are the dividends which they receive lessened by the amount of the tax paid, but the knowledge that the earnings are to be taxed and thus diminished, acts as a deterrent. To tax the accumulations of the provident poor is often to tax the insurance which protects their offspring from becoming public charges in the event of the death of the parents. Yet the Legislature of the State of New York enacted a law the year before last, which provided that every Savings bank shall pay an annual tax equal to one per cent. on the par value of its surplus and undivided earnings. The unwisdom of the enactment of this law is evident when it is remembered that a surplus is created to the end that when investments depreciate the depositors may receive in full upon demand the moneys deposited together with the earned dividends. It is especially the duty of this Savings Bank Section to foster a growth of public opinion adverse to this phase of tax legislation.

The incumbent of a Savings bank receivership is necessarily brought into close contact with the sufferings of deserving people, caused by its failure, and is thereby deeply impressed with the absolute necessity of throwing every possible safeguard around their deposits. He realizes also that the taxation of these bulwarks against socialism is as wrong as the enactment of loose statutes relating to investments; and let me further say, socialism is a coming danger that must not be ignored. The figures made public by the Commissioner General of Immigration for the year ending June 30 last, show the wholly unprecedented number of 875,046. This is an increase of thirty-two per cent. over the preceding twelve months. Only 8,769 of this number were debarred upon the ground that they were paupers, contract laborers, convicts, or for other reasons; if the present rate of increase is maintained, the total number coming to our shores this year under our existing lax immigration laws will exceed a million.

CHANGE IN THE CHARACTER OF IMMIGRATION.

To a very material extent those who came in previous decades seeking a haven in the land of liberty and plenty were alien only in name and were half assimilated before they arrived. They were industrious people who meant to make our country their permanent residence. They did not colonize in the slums of our great cities, but passed through and casting their eyes westward took up land for homes. They were comparatively well-educated, enterprising people, from Great Britain, Ireland, Germany and Scandinavia. The majority of them were not Slavs, Bohemians, Latins, and Asiatics, most—I do not say all—of whom are fitted only for low grades of manual labor.

Formerly our immigration was composed of families with some pecuniary resources; while now they are predominantly of limited capacity and of a comparatively low order of intelligence.

It is a noteworthy fact that seven-tenths of the total immigration of the year 1902 was from Austria-Hungary, Italy and Russia, forming classes which do not readily adopt our customs. The American spirit is foreign to them and non-assimilating. Such immigration is still pouring in at high tide, with the quality as inferior as the quantity is extraordinary. These unleavened masses speedily develop recruits to our criminal classes, and create the well-termed "foreign quarters" in this city of San Francisco. Unhappily, these abnormal masses have found their way all over our land.

With hundreds of thousands of immigrants coming into our great cities year after year, the prospect of lean years, when there are no wages to be earned, must be viewed with distrust. If those who now swell the ranks of cheap labor are dissatisfied under existing circumstances of material prosperity, what may we not expect to see when these prosperous conditions fall? And when at last

the present remarkable industrial activity subsides and financial depression obtains, as is inevitable, may we not see great suffering, not only among those whose wants are small, but among those others of a higher plane of living who are to-day competing with the recent arrivals? Much has recently been said by the financial journals concerning "undigested securities." Quite as great an evil in the body politic is liable to follow from what may be termed "undigested aliens."

DEPRECIATION IN REAL ESTATE VALUES IN 1873.

In connection with the Savings banks failures hereinafter mentioned, it may be stated that nearly all occurred in the same general period that followed the financial upheaval of the year 1873. It may not be extreme to say that the depreciation of real estate in this country thirty years ago was so tremendous in degree and so unprecedented as to justify its characterization as a financial cataclysm.

The fall in real estate prices in New York city and Brooklyn in 1873 now seems to us more like the puncturing of a colossal balloon. Preceding that year, extremely high prices, not justified by economic bases, were the rule, thus making an unsound market value. This will be appreciated the better when we consider that after all the general improvements which followed the elevated railroads and other changes in local transportation, with the large amount of added value from the unearned increment of a score of years, the highest prices of 1873 were not reached until 1893. This literal panic of 1873 stopped building construction for at least six years. It will be readily seen that the Savings institutions, so vitally interested in real estate through their mortgages investments, would naturally feel the shock of the tempest. Indeed it is remarkable that so many survived.

There are but few who can foresee a financial panic; although it has been well said that President Cleveland foretold the financial storm so intimately connected with the earlier silver issue. Nothing is more unexpected than such financial tempests. Who could have predicted with intelligence that the failure of the Ohio Trust Company of 1867 would bring on the fatalities of that year, or that Jay Cooke's downfall of 1873 would inaugurate the losses of that period? With uncertainty always present, there must be constant vigilance. No man can deduce an absolute rule of safety—that is beyond the limitations of humanity, but there is a logical deduction that follows past experience, and justifies our careful attention.

CAUSES OF SAVINGS BANK FAILURES.

An examination of the Savings institutions in the State of New York that have failed reveals three general causes of failure. As a first general cause, I would specify the "available fund" clause in many of the charters of these failed banks, created by special legislation. By available fund clause I mean the indefinite omnibus provisions of those special charters which permitted investments other than those specially authorized, but not exceeding a fixed amount, in "such available form as the trustees might direct." Under the fancied shelter of this vicious clause, the trustees forgot their trust duty, and were tempted by the speculative fashion of the time. In the strong-boxes of many of these insolvent banks were found large blocks of repudiated bonds of Southern States, unsafe railroad bonds and other questionable securities, showing the speculative tendency of so-called trustees with the trusts committed to their care.

It is interesting to note that this so-called available fund was actually meant to be a reserve fund, although it would be closer to the fact to term it the speculative fund of these institutions. It is also singular that this fund, although intended as a reserve, was not made proportionable to resources or deposits, but was fixed at an arbitrary amount.

Another peculiar feature was that this reserve was not necessarily to be held in gold, silver or bank notes or even negotiable securities, but it was to be, in the exceedingly liberal words of the charters, in "such available form as the trustees might direct."

Under an amendment of the constitution of the State of New York all special charters were abrogated and a general law was enacted later. Under a revision of the statutes affecting banking institutions, in which I was fortunate to have an active part, this general law was incorporated and the available fund, with its widely-discretionary powers that were so grossly abused, no longer exists.

As a second general cause of failure I would name incompetency or carelessness in the board of trustees. Poor advice can be had for the mere asking, and

indifferent or personally weak trustees may bestow a modicum of time or thought upon a business that brings them little or no compensation.

As relating to this matter let me say that in the official report of the Receiver of the Mechanics and Traders' Savings Bank, of the City of New York, that officer states as follows: "Among the incorporators there were many well-known citizens. Only a few of them, however, appeared to have attended the meetings of the board of trustees or to have shown any active interest in the welfare of the institution. From the first it seems to have been controlled by a few men, not the best or most capable." In another part of the same report he makes this statement: "It is now well known that a number of the trustees of this institution have been insolvent for years past; all have neglected or mismanaged their trusts and several have, for alleged services, withdrawn large sums of money for their own use."

When the doors of the Claremont Savings Bank were closed the Bank Superintendent learned that the funds of depositors were used as the capital of the money exchange and discount broker in the adjoining building.

An instance of sham financiering is shown in another failure of a Savings institution, where the only cash asset found was five dollars and some odd cents. Here the trustee, desiring to make a big showing for an official report, handed in checks for \$60,000 and thus inflated the deposits. These checks were returned and the entries were cancelled after they had served their purpose, and the same method was adopted in following reports.

Personal vanity was the motive for establishing some of the unsuccessful banks. I recall one instance where a prominent politician conceived the ambition to become a bank President. He straightway had a Savings bank incorporated by special charter and his family became the largest depositors. A remarkable feature was the fact that he paid out of his personal funds the chief clerk's salary. After his ambition in this direction was satisfied, he spent a term in State's prison for his connection with the Tweed frauds.

The failure of the Clinton Savings Bank in the City of New York was due to the exceedingly injudicious investments made by the directors in the stocks of a trust company and of other like corporations which became insolvent. It should be added, however, that several of the directors exerted themselves strenuously to repair the loss of the depositors by expending a considerable amount of their own funds to keep the bank from being dissolved.

As a third general cause of failure I would designate the element of positive dishonesty. Yet this has appeared so infrequently in Savings bank management as to justify the belief that it is less common than sporadic crime in average humanity. A case of unquestionable reproach is to be found in the Teutonia Savings Bank, of New York city, which failed in 1878. The Secretary of this institution adopted the plan of making false entries on the books so as to make it appear that the bank in buying securities paid more than the actual purchase price. The difference between the false price and the actual price was taken from the bank's cash and divided among the trustees to whom it was paid as "thieves' money," as Charles O'Connor termed the dishonest division of cash spoils by inclosing the share of each trustee in a sealed envelope directed to him and handed to him in person. Running along with this plan of robbery was another scheme. The salaries of the principal officials were doubled and the additional amount was divided equally among the trustees. When this institution failed, its depositors lost over \$200,000.

When the receiver of the Rockland Savings Bank was appointed, he found ten memorandum checks aggregating over \$12,000, drawn on a neighboring National bank by the Secretary, which had been counted as cash by the officers, although absolutely valueless. The President had been guilty of like offences. The Receiver obtained judgment against the President for \$39,020.32 and against the Secretary for \$33,022.47, both of which were found to be wholly uncollectable. In another case a Savings bank was openly made the annex of a near-by bank of discount, and it thus became a source of supply for the discount bank. When the latter failed, it was found that deposits of the Savings institution had been swallowed up by its neighbor. These are but typical instances.

Of the Savings banks that have failed in the State of New York, twenty-eight owed depositors \$14,720.40. The net loss to depositors aggregated about \$4,000,000, and of this deficit over \$1,000,000 was charged to the Third Avenue Savings Bank, of New York city.

CARE IN MAKING INVESTMENTS.

Efforts in the New York Legislature to unduly extend by statute the scope of Savings bank investments have been closely watched by the ever-faithful body of men who are ready to oppose any movement that suggests the chance of undue risk. Conservative management is the rule. It is only natural that this should be so. They realize that Savings institutions are of the people and for the people. They cannot be bought by any so-called "banking trust." The people's savings are now the special care of capable and disinterested men of affairs, whose safeguarding is a form of practical patriotism that is not fully appreciated. Much has been done in the way of restricting the discretion of trustees and limiting their power of doing harm. A closer system of inspection and control has been adopted. At the present time, if a trustee is insolvent or becomes a non-resident of the State, his position becomes vacant. The trustees will serve without compensation, but it has come to be realized that the general good name and high standing of trustees of Savings institutions make the position one of honor as it should always be of the strictest financial integrity. That so many men in active business life, some of large means, give at the present time so much of their time and energy to the care of the people's savings makes one think well of humanity.

The earnings of the workingman are the interest on his capital of strength and skill. These Savings bank deposits are his surplus income, brought into being by reason of his ambition. The moment he opens an account with a Savings institution he is a capitalist, and thus becomes a conservator of order. These depositors and earners are truly, in a democratic sense, the "salt of the earth," as they are, in fact, the very backbone of the nation. The conservators of their funds must themselves be men of integrity. The history of the failed Savings banks proves this statement to be eminently true.

STATE SUPERVISION OF SAVINGS BANKS.

A word as to the supervision of Savings institutions by the State. This supervision in the interest of safety and good management does not prevail in all States, but is seen at its best in the States of Connecticut, Massachusetts and New York, where the strongest and largest Savings banks are to be found. The colossal deposits of savings in these three Commonwealths have drawn the attention of the ambitious and many attempts have been made to get similar results without adequate restriction. It is not in any spirit of criticism, but under a sense of duty, that I feel compelled to say that outside of New York and New England there are but few States where fully protective Savings-bank legislation exists. In several of the States there are concerns, some in corporate form, others as quasi-partnerships, and some with insignificant capital, actually doing the business of Savings institutions. A portion of them are under no restriction as to the use to which they may put the accumulations of the multitude, and the security exacted is far from adequate. Nor do depositors, whose moneys are subjected to the hazards of the ordinary business of such depositories, duly participate in the profits of such organizations, for these accumulations are to a material extent diverted to the pockets of the managers and stockholders of these establishments.

The abuse of this method of conducting a Savings institution will surely crop out. When we see such institutions managed for personal profit, it is easily understood why in some instances unscrupulous promoters have been known to promise liberal dividends. The natural result of the rule of great gains and great risks may soon be seen. It would not be so correct to sweepingly assert that Savings institutions outside of State supervision are unwisely managed. They are directed by the personal equation that happens to control, but there is no adequate government by law, no system of safeguarding the interests of the modest earners who go to make up the great mass of depositors in Savings institutions. The Asbury Park, N. J., failure of last year and the more recent one in Bessemer, Ga., are instances where the savings of self-sacrifice were swept away, with great suffering to the depositors.

A more recent proof this grave necessity is the conviction under the State penal statute, the 14th day of last month, of the executive officers of the Mercantile Co-operative Bank, at Freehold, N. J., which also carried on a Savings bank business.

A shrewd man of affairs may hesitate to risk his means in an investment which his judgment tells him is hazardous, yet when acting in a fiduciary capacity the hope of favorable results, especially if he is to be personally benefited, may obscure his judgment and even dull his conscience. Misfortune to a bank does not even

necessarily imply dishonesty in management. Nevertheless, he whose duty it is to conserve the savings of the poor must remember that the exercise of this duty is the most sacred of trusts. Trustees must not be permitted to neglect their plain duties, and every State should at least enact a law that a deliberate misuse, an intentional misappropriation, of property in the keeping of such officers shall be severely punished as a crime.

SOCIALISM A COMING DANGER.

I repeat that socialism is a coming danger. I predict it will be, to a material degree, the "ism" of the future. If the prediction is well founded, the present "ism" among those who listen to my words should be patriotism. Not the patriotism that contents itself with the explosion of fireworks on Independence Day to celebrate the anniversary of the adoption of a Declaration one hundred and twenty-seven years old, but the patriotism that may induce the members of the body I am now addressing to stand in line to register and again to stand in line and vote and to induce others to vote for the candidates who will pledge themselves to adopt remedial legislation. This is now absolutely necessary in a number of our Commonwealths. It is true that such legislation is purely a matter of State control, and naturally a diversity of opinion in the matter will exist. But the man who will inaugurate in those States now lacking a statutory plan, a conservative and workable scheme of legislation, will surely earn a full meed of praise. If a model is sought, those of us in attendance from the Empire State may point to the laws which control our Savings institutions, the aggregate deposits of which on the first day of last July exceeded \$1,150,000,000.

F. A. HALL, Cashier Grand Rapids Savings Bank, Grand Rapids, Mich.: I would like to say that some of us would probably like an opportunity to discuss the next to the last paper that was read. I wanted to ask Mr. Hanhart if the legal points which he offered were largely those of the State of New York, or whether they covered the States generally. Concerning the first proposition, in regard to the trustee, from the decisions that I have read, the large majority of them were in this way: that a party cannot make a gift and own it himself, at the same time. If I understood his proposition correctly, that is about the position that that trustee business would occupy. Then control of it coming to one of their children in the event of their death, as I understand it, as a legal proposition, is not upheld; that they cannot make a gift and still retain control of it, absolute or otherwise.

MR. HANHART: I will say this in answer to the gentleman: that if, say, John Brown chooses to open an account, depositing, say, a thousand dollars in the name of John Brown, in trust for his son, the question has nothing to do with the bank. The bank looks upon him as a trustee, and a trustee always has control of the fund. The responsibility of the trustee to the beneficiary has nothing to do with the bank. The bank is the depository for the fund, and the trustee, as a trustee, draws the money, withdraws it, or deposits it as he pleases, and the bank knows nothing of the equities; and, as a matter of fact, I may state in a general way that the less the Savings bank knows as to such equities the better off it is. It is merely a depository, and it has not the power to carry out trusts, and the less it knows about it the better. We have had many instances of that kind. Take old Mr. Guion. He had lots of accounts of nieces and nephews, and he chose to draw the money out, and use the money to buy bonds with, and made presents of those bonds to those very beneficiaries. When he died the beneficiaries sued his estate for the money that he had deposited in the bank, and they thereby got it twice, both the bonds and the money. The bank had nothing to do with it. The point must be emphasized that the bank must be made safe. I am talking from the point of view of the banker, himself. Many a man will deposit, say, a thousand dollars for his son to-day,

and change his mind to-morrow; but the law will not allow him to do that. If he has stated to his son that he has deposited that thousand dollars in trust for him at his death, the son can sue the estate for the money, but he cannot sue the bank. I hope I have answered the question of the gentleman.

MR. HALL: Yes, sir, you have answered the question, but I still have an idea that I can find law and decisions to the contrary.

MR. HANHART: I have tried to discuss the point in a general way. The laws of the different States vary considerably.

EL. J. PARKER, of Quincy, Ill.: Where you have to open an account in the name of a trustee, a father for a son, John Brown for Joseph Brown, and so forth, the boy in the one case may wish to draw that money when he is sixteen years of age. What is your practice? Do you, when that son comes of age, pay the money to the son, or to the trustee?

MR. HANHART: We do not consider that the beneficiary has any rights whatever with the bank. The money is deposited by the trustee, is in the name of the trustee, and under the control of the trustee. It is only upon the death of a trustee that the question of beneficiary arises. Until then we do not consider the beneficiary. He does not exist so far as we are concerned.

F. W. ROBINSON, Cashier Producers' Savings Bank, Bakersfield, Cal.: Entering this discussion in regard to joint accounts of husband or wife, and taking into consideration the question of which may demand the money, acting under the advice of California's attorneys, we have required the signing of an agreement with the bank by both husband and wife, assuring payment to either on demand, accompanied by the pass book, or to the survivor in case of death; and this would cover several points unmentioned in the paper which I refer to. It seems to me that that is a very wise protection on these joint or separate accounts, and I thought that I would simply bring it before the convention.

Another matter that I would like to speak of regarding another paper that has been read here, namely, bank advertising—one feature of bank advertising was not mentioned at all. I am not here to advertise anybody, but it strikes me that the scheme of the small steel savings bank has proven profitable in experience. We have tried it in our place and it has materially increased our deposits, aiding us in a way that nothing else has done. It brought people to the bank, into contact with the officers of the bank, who could not have been brought in in any other manner. I believe this scheme worthy of our serious consideration. There is no doubt that the closer we come in contact with the general public, the more we educate them into the way of saving.

MR. OTIS: I would like to say that this question of steel savings banks has been pretty thoroughly tried in Chicago, and very successfully tried by several banks. It has been undertaken, however, on such a wholesale plan that it has become a perfect nuisance, and although most of the Savings banks now, with few exceptions, have these banks behind the counter, they don't generally advertise it. If anybody wants one, he can get it by asking for it. Our experience is that in case—one-half the cases, I should say—where banks are brought in for money, and it is taken out and counted and carried away, it takes a great deal of time in large Savings banks where a great many accounts are handled. We have found it necessary to have separate men behind the counter to handle those banks and count them up, and so forth. It works very well for a long time, but it has been very badly abused.

Another point: Recently, some of the merchants who are selling diamonds on the installment plan had signs put all over the city. The signs say that you can, by the use of steel savings banks, get money enough together in that way to buy diamonds. The use of steel savings banks has become very prominent, and most people in the banking business are not looking upon it with very great favor. The people who have been putting out these savings banks, however, are charging so much for so many banks, and agreed to put them out and have an account started wherever the bank is placed, and in that way there has been a great deal of fraud practised. Mr. Tater in his paper did not touch on that subject, because the bankers of Chicago, the Savings banks, have positively and absolutely refused to push that kind of business.

WM. FELSINGER, President New York Savings Bank, New York city: The very fact of our being here shows that we believe in organization, and in the State of New York we have an organization of State Savings banks that takes a great interest in legislation affecting those institutions, and I, therefore, beg to offer this resolution which I will read:

Whereas, The State association of Savings banks, as existing in several States, have proved most beneficial to their interests, and helpful to their depositors by representing them before their respective legislatures in the consideration of bills affecting their interests, and in bringing bank officials together for the discussion of the many subjects of special interest to them; therefore be it

Resolved, That we strongly urge the organizing of State associations of Savings banks in every State and Territory of the Union having Savings banks, and that we pledge our individual effort to further this object.

I, therefore, move that this resolution be adopted.

MR. HALL: I second the motion, and I call attention to the fact that at our meeting held in New Orleans a year ago a similar resolution was adopted. If nothing has been done in the matter since then, I think we and every one of us should give this resolution our hearty support, and endeavor to do everything possible to foster a saving spirit amongst our people.

C. M. PRESTON, Cashier Hamilton Trust and Savings Bank, Chattanooga, Tenn.: I want to say a few words in relation to the States taking up this matter as an association, and I don't know of any better way of bringing the matter to the attention of the people than by recounting the experiences that we have had in the State of Tennessee.

At every meeting of the Legislature of that State, we have vicious laws introduced by ignorant legislators, endeavoring to regulate the State banks and the Savings banks. It requires a good deal of effort upon the part of the State association to keep down these vicious measures, and we need the assistance that the adoption and the pushing of this resolution will give us. Individual banks, themselves, are indifferent, and the casual legislator thinks he ought to do something for us, and consequently he introduces some kind of a measure. If we were prepared and organized in the different States, and recognized as a body, we would be consulted about such matters as this, and laws would not be passed against the interest of a Savings bank and the Savings banks depositors.

I heartily favor this resolution, and I trust that it will be passed; and I hope each and every one will use his best efforts to bring about the organization of such an association so that we can regulate these laws ourselves.

If the Savings bank officials cannot suggest a few wholesome laws for the government of Savings banks, they ought not to be officials of such institutions; and I trust that this resolution will receive the hearty sympathy and support of all.

L. H. DINKINS, Cashier Algiers Savings Bank, New Orleans: I would like to ask for some information. Is it contemplated that the State shall organize and have separate conventions?

MR. FELSINGER: The idea is that each State shall have its organization representing a large number of people and this will give it great power in the Legislature through the people. They should meet once a year, and each Savings bank organization should work in its own State, each State having its own organization, of course.

MR. DINKINS: That, of course, would mean the State organizations, and the national organization also. Do I understand that the national organization would be allied with the State organizations?

MR. FELSINGER: Yes. The Savings Banks Association of the State of New York has, however, nothing to do with this association whatever. They simply send a delegate to this convention. This resolution is recommending this to all the States, an organization similar to the organization in New York State.

MR. TUTTLE: Speaking to the resolution, I will say that we have an organization of Savings banks in the State of Connecticut. There are about ninety Savings banks, and from sixty to seventy of them belong to this organization. I can assure you that this organization helps us very much. We meet once or twice a year, get together, discuss plans, rates of interests, bonds and mortgages, and things that we ought to do; and also, when bills come up in the Legislature, a committee is appointed to look after that matter. When bills are introduced in the Legislature, this association looks after them, and tries to see that no bills go through the Legislature excepting such as will protect the Savings banks and the depositors. We find that it works very well, and every State should have an organization of that kind.

The resolution introduced by Mr. Felsinger was thereupon adopted.

THE CHAIRMAN: The next order of business is the election and the installation of officers. We are now open for nominations.

MR. PRESTON: For the office of chairman, I name Mr. A. C. Tuttle, Treasurer of the Naugatuck Savings Bank, of Naugatuck, Conn. For vice-chairman, I name Mr. William Felsinger, President New York Savings Bank, of New York city. For the three members of the executive committee, I name Mr. P. Leroy Harwood, Treasurer Mariners' Savings Bank, New London, Conn.; Mr. E. Quincy Smith, Vice-President Union Savings Bank, Washington, D. C., and Mr. Fred Heinz, President Farmers and Mechanics' Savings Bank, Davenport, Ia.

THE CHAIRMAN: Are there any other nominations? (After a pause.) As there is but one ticket in nomination, we will entertain a motion that the secretary cast the ballot for these gentlemen as nominated.

The motion was duly made and seconded that the secretary cast the ballot for the nominations as made, and carried.

MR. HANHART: Mr. Chairman, I have, according to this resolution, cast a ballot as follows:

For chairman, Mr. A. C. Tuttle; for vice-chairman, Mr. William Felsinger, and for the three members of the executive committee, Mr. P. Leroy Harwood, Mr. E. Quincy Smith, and Mr. Fred. Heinz.

THE CHAIRMAN: I therefor declare the gentlemen elected.

Gentlemen, it gives me pleasure to introduce to you Mr. A. C. Tuttle, Treasurer of the Naugatuck Savings Bank, of Naugatuck, Conn., whom we have just elected chairman of this association. (Applause.)

MR. TUTTLE: Mr. Chairman and Gentlemen of the Convention—Thanking you most heartily for the honor you have conferred upon me by electing

me chairman of this body for the coming year, I wish to say that I shall endeavor to perform the duties imposed upon me to the very best of my ability.

There is one word that I wish to say to you, and that is that I hope we may receive the co-operation of all the members. We get together only once a year, visit each other, discuss matters, hear papers read; and I would like to say that if during the year any member of the association has any topic that he would like to have discussed, that I am sure the executive committee would be very glad to have such topics sent in to them some time during the year, and we would then endeavor to find one who will write a paper on the subject that will be interesting to all. We ought to have more members. You will remember the trouble we had in New Orleans last year in getting any organization. This year we have a great many more, and I am very much pleased to see it. We have now about five hundred members, and I hope that next year that number will be doubled, and when you meet next year we will see a great many more than are present here. I thank you heartily for the honor conferred upon me.

MR. OTIS: I would like to offer a resolution of thanks to the retiring officers for the services rendered during their term of office; and I, therefore, offer such a resolution, and make the motion that it do pass.

The motion was duly seconded, the question put, and carried.

MR. PARKER: Mr. President, I wish to make a suggestion. We know that the author of a paper who is familiar with it is likely to throw a little more spirit and emphasis into the reading of it than where the paper is read by proxy. In many official bodies with which I am connected, we find it necessary to appoint an official reader, and I would suggest that the officers of the association hereafter take that matter into consideration, so that in going from city to city and suffering the disadvantages of the poor acoustic properties of the building in which we meet, that we may have an official reader. He can be chosen in whatever city we come into, and then we can hear every paper read with distinctness. We travel long distances and we have had admirable papers presented to-day, but we have not heard them perfectly. It is a long time to wait for them to be printed, and I make the suggestion without expecting any action to be taken upon it.

MR. TUTTLE: I can assure you that the question will be considered by the executive committee.

MR. LATIMER: I just want to emphasize what Mr. Parker has said, for I know that he takes a great interest in the work of the Savings banks and in their association. I quite agree with him.

THE CHAIRMAN: Gentlemen, I now declare this convention adjourned.

LIST OF DELEGATES REGISTERED AT THE CONVENTION.

Atkinson, E. S., Cas. People's Bank, Summit, Miss.	Austin, W. R., Teller Second Nat. Bank, Wilkesbarre, Pa.

Savings Departments in National Banks.—Inquiries as to the right of a National bank to operate a Savings department have been received by the Comptroller in such large numbers that a printed form of reply has been prepared. This form is as follows:

"In reply to your letter of —, relative to the right of a National bank to operate a Savings department, you are respectfully informed that there does not appear to be anything in the National Bank Act which authorizes or prohibits the operation of a Savings department by a National bank.

Many National banks pay interest on deposits, the receipt of such deposits being evidenced either by entries in the pass books of the depositors or by issue of certificates of deposit, as may be preferred. Deposits of this character must be shown in the reports of the bank, and loaned in the manner provided by the National Bank Act. This would prevent a National bank from accepting real estate collaterals which are deemed judicious for Savings banks. All deposits, however, in a National bank are payable on demand, except when made the subject of special contract, but the right of a bank to make a contract of that nature is a matter for judicial determination.

The expediency of a National banking association, organized for the purpose of doing a business of discount and deposit, engaging in the business of a Savings bank is one for consideration and determination by the board of directors."

As will be seen the Comptroller finds nothing in the law to interfere with a National bank engaging in the business of a Savings bank and accepting deposits subject to special contract. Whether this can be done, however, has not yet been passed on by the courts, and the Comptroller says that the right of a bank to do so is a matter for judicial determination. In the absence of any decision by the courts, the Comptroller inclines to the opinion that a National bank can accept time deposits and also deposits with the agreement that they are not to be withdrawn without sixty or ninety days' notice.

NATIONAL BANK OF COMMERCE, NORFOLK, VA.

This institution, which has experienced a very remarkable growth for a number of years past, has recently still further enlarged its volume of accounts by the absorption of the business of the City National Bank of Norfolk, an institution having \$200,000 capital.

The capital and surplus of the National Bank of Commerce have been increased from time to time, keeping pace with the large gain in the bank's business. In 1890 the capital was only \$50,000, while now it is \$500,000, and in the same time the surplus and profits have grown from \$41,000 to over \$300,000, and the individual deposits, which were \$381,000 on January 31, 1897, advanced to \$1,279,000 about four and one half years later, and have steadily gained ever since.

These facts speak very forcibly for the capacity of the bank's management. Of course, the gratifying record made is also due to a considerable extent to the prosperous commercial, industrial and agricultural conditions prevailing in Norfolk and the surrounding country. The bank, by keeping its facilities well up to the public demands, has been in a position to get its due share of this prosperity, and has, in fact, by its wise foresight, greatly aided in upbuilding the city's business interests.

Following is a list of the officers of the bank: President, Nathaniel Beaman; Cashier, Hugh M. Kerr; Assistant Cashier, M. C. Ferebee.

The National Bank of Commerce is one of the South's sound and progressive banks, and in addition to being profitable to its shareholders is acceptably serving the business interests of Norfolk and vicinity.

GEO. D. COOK & CO., BANKERS.

The corporation of Geo. D. Cook Co., of New York and Chicago, was dissolved a short time ago, and the Chicago office discontinued.

The business will be continued at 25 Broad street, New York city, by Geo. D. Cook and Arthur B. Turner, under the style of Geo. D. Cook & Co. Mr. Cook was President of the former corporation and Mr. Turner Assistant Secretary and Treasurer.

They will continue to do a general bond business, making a specialty of Mexican and other foreign investments. The firm has been identified with some large and successful loans of the Mexican Federal Government and some of the Mexican States, and has considerable interests in important business enterprises in Mexico. That country has recently attracted the attention of investors here, and large amounts of American capital have gone into Mexican enterprises. Doubtless these investments will be increased when Mexico places her monetary system on a more stable basis—an event whose early consummation is expected.

Messrs. Geo. D. Cook & Co. are familiar with the Mexican investment field, and their selection for placing the loans of that Government and the success achieved in these important undertakings reflect credit on the firm's financial skill.

BANKING AND FINANCIAL NEWS.

This department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—A special meeting of the shareholders of the National Bank of Commerce will be held November 20 for the purpose of amending the articles of association. It is proposed to provide for additional Vice-Presidents, to change the date of the annual meeting from May to the second Tuesday in January, and to provide that the directors shall be elected by the shareholders. Heretofore, under the bank's charter, the board of directors has been self-perpetuating.

—The Equitable Trust Co. will move into the offices heretofore occupied by the Western National Bank.

—Henry G. Lewis has been elected Assistant Cashier of the Consolidated National Bank. He was formerly connected with the Fourth National Bank.

—A branch office of the Nassau Trust Company, Brooklyn, was opened recently at Fulton street and Red Hook Lane, Brooklyn.

—M. M. Belding, Jr., formerly Vice-President of the Broadway Trust Company, has been elected President in place of Moses May, resigned. Frederic G. Lee, formerly Secretary, will be made Vice-President. Mr. May will continue to act as chairman of the executive committee.

—At the annual meeting of the New York Clearing-House Association, October 6, James Stillman, President of the National City Bank, was re-elected to the presidency for the second term of one year. Gates W. McGarrah, President of the Leather Manufacturers' National Bank, was re-elected secretary.

Important committee changes included: clearing-house committee, J. Edward Simmons, President Fourth National Bank, chairman. New members—Wm. A. Nash, President Corn Exchange Bank; George F. Baker, President First National Bank, and Alexander Gilbert, President Market and Fulton National Bank.

Conference Committee—Richard Delafield, President National Park Bank, chairman. New members—Herbert L. Griggs, President Bank of New York, N. B. A. and Samuel G. Bayne, President Seaboard National Bank.

Nominating Committee—Samuel Woolverton, President Gallatin National Bank, chairman. New members—Stephen Kelly, President Fifth National Bank; Christian F. Tietjen, President West Side Bank; James Rowland, President New York National Exchange Bank.

Committee on Admissions—William H. Porter, President Chemical National Bank, chairman. New members James M. Donald, Vice-President Hanover National Bank; R. L. Edwards, President National Bank of North America, and William L. Moyer, President National Shoe and Leather Bank.

Arbitration Committee—P. C. Lounsbury, President Merchants' Exchange National Bank, chairman. New members—Scott Foster, President People's Bank, and Hart B. Brundrett, President Pacific Bank.

The Manager's annual report for the year ending September 30, 1903, showed these interesting data: clearing-house transactions for the year—exchanges, \$70,893,655.94; balances, \$3,315,516.48; total transactions, \$74,149,172.42.

William Sherer was re-elected Manager, and William J. Gilpin, Assistant Manager.

—On October 12 the New York Clearing-House began its second half century of existence. With the exception of a short talk given by Manager William Sherer to the clerks and representatives of the banks at settlement time, there was no formal observance of the anniversary. The business of the clearing-house for the fifty years, as stated by William J. Gilpin, the Assistant Manager, amounted to \$1,507,111,280,380 in exchanges and \$71,635,947,268 in balances. The largest amount of exchanges for any one day in the fifty years was \$598,000,000

on May 10, 1901. The largest day's balances amounted to \$24,970,000 on January 31, 1900. The largest debit balance for any one bank on any one day was \$14,582,000, on July 9, 1901. The largest credit balance for any one bank on any one day was \$16,471,000, on March 5, 1901. The largest amount brought by any one bank to the clearing-house was \$74,564,000; the largest amount received by one bank from the clearing-house was \$70,062,000. The largest check known to have gone through the clearing-house was one for \$17,000,000, on May 25, 1900.

NEW ENGLAND STATES.

Boston.—On October 25, announcement was made of the consolidation of the National Hamilton Bank and the Fourth National Bank under the name of the latter. The merger has been ratified by a two-thirds vote of the stockholders of both institutions. George W. Newhall will become Vice-President of the Fourth National Bank.

The consolidation plan had been under discussion several weeks. The Fourth National Bank was founded in 1875, and has a capital of \$1,000,000. The incorporation of the National Hamilton Bank took place in 1888 with a capital of \$500,000.

In 1898 Boston proper contained fifty-two National banks, representing a capital of \$48,150,000. Since that time, mainly through consolidation, the number has been reduced to twenty-eight, with a capital of \$30,200,000.

Failures, Suspensions and Liquidations.

Illinois.—J. E. Brown, operating as the Bank of Chatsworth, at Chatsworth, Ill., closed October 20, with liabilities amounting to \$33,177.

—The Exchange Bank, of Lockport, closed October 31. It was capitalized at \$25,000, and had about \$40,000 deposits.

Indiana.—The Bank of Roselawn, owned by Jesse Fry, suspended October 10.

Indian Territory.—On October 26 the Bank of the Chickasaw Nation, doing business at Tishomingo, I. T., closed its doors. Its capital was \$50,000.

Maryland—BALTIMORE.—The Union Trust Company suspended October 19, and Miles White, Vice-President of the company, was appointed Receiver. At the close of business March 31, the Union Trust Co. reported \$1,000,000 capital, \$250,000 surplus, \$150,697 undivided profits and about \$2,000,000 deposits. It is expected that the company will be able to resume business in a short time.

The Maryland Trust Co., of Baltimore, also suspended October 19, and Allan McLane, a Vice-President of the company, was made Receiver. On June 30 last the company reported \$2,125,000 capital, \$2,437,500 surplus, \$677,998 undivided profits and time and demand deposits \$5,778,000.

Michigan.—The Bank of Eau Claire, at Eau Claire, Mich., of which A. C. Probert was President, suspended October 6. The bank was established in the latter part of last August.

Minnesota.—The Farmers and Merchants' Bank, of Lesueur, closed October 22. Liabilities are reported at \$50,000.

—The Mapleton State Bank closed October 20, one of the officers having disappeared, and his accounts are reported \$18,700 short.

New York—NEW YORK CITY.—The International Bank and Trust Co., a Delaware corporation, doing business in the City of Mexico and having branches in several cities in the United States, was placed in the hands of a Receiver October 21.

—Dye Bros., doing a banking business at Allegany, suspended October 2. Mason M. Dye, who was at the head of the firm, died a few weeks ago. Deposits are reported to be about \$250,000.

Pennsylvania—PITTSBURG.—The Federal National Bank, capital \$2,000,000, closed October 31. Its deposits amounted to a little over \$4,000,000.

—The First National Bank of Allegheny, organized in 1864, was placed in the hands of a Receiver October 22. It is said the assets are more than sufficient to pay depositors.

Wisconsin.—The Montello State Bank closed October 20.

—The Princeton State Bank was closed October 19, and J. E. Liemer, the Cashier, is reported to be under arrest, charged with forging and embezzling to the amount of \$69,000. A Receiver has been appointed for the bank.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under the different State headings.

Francisco.)

New Counterfeit \$5 Silver Certificate (INDIAN HEAD).—Series of 1899; check letter
A; plate number 161; J. W. Lyons, Register of the Treasury; Ellis H. Roberts, Treasurer of
the United States.

The most noticeable defect in this counterfeit is the coarse, blotchy appearance of the
Indian head. The paper is of good quality with red ink lines to imitate the silk threads of
the genuine.

The lines of the lathe work, particularly on back of note, are broken into small white dots
and dashes.

The good general appearance of this counterfeit will deceive the ordinary handler of
money, but an examination of the Indian portrait should result in its detection.

Rare and Valuable Coins.—A rare and interesting collection of gold coins will be ex-
hibited at the World's Fair by Ira D. Garman, of Philadelphia. The coins run from \$50 gold
pieces to 25 cent pieces. The most valuable coin is a \$50 California gold piece, dated 1855. It
is said to be worth \$300 in the numismatic market. It is more than twice as large as a silver
dollar. The oddest coins of the collection are the California octagons—very comely and at-
tractive pieces. The 25-cent pieces are very small, and thin enough to be bent between the
fingers. Some are octagonal and some are round. An exceedingly rare coin of the collec-
tion is a papai, or Pope's coin. It is gold, and the size of a \$10 gold piece. Contained in the
collection are many California gold coins which are very valuable, because they date back to
the days of '49, and are the output of private mints.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, November 3, 1903.

THE MARKED IMPROVEMENT IN THE BOND MARKET last month seems to have been accepted as of peculiar significance. There has been an exceptional advance in the price of bonds accompanied by a broadened demand. The movement began even before the decline in the stock market had ceased, low records for a number of stocks being made in the first half of the month. In some cases the prices of railroad bonds have advanced as much as four per cent. since October 1.

In connection with this very encouraging condition the placing of \$20,000,000 of bonds with a prominent banking house by the Pennsylvania Railroad Company late in the month was considered as indicative of the return of confidence. These bonds are in two issues of \$10,000,000 each, both guaranteed by the Pennsylvania Railroad. One issue is secured by a mortgage on the Long Island Railroad, and the other consists of bonds issued by the Philadelphia, Baltimore and Washington Railroad Company. The bonds bear four per cent. and run about forty years. That any banking house should undertake to dispose of \$20,000,000 of bonds to the public at this time suggests that investors are regaining confidence, a fact illustrated, as already mentioned, in the activity and strength of the bond market.

It is true that all the events of the past month have not been of a favorable character. On the contrary the incidents of the early part of the month were in many respects of a disagreeable character. The revelations in the United States Ship-building matter were an unfortunate commentary on modern financiering. The consideration shown for the outside investor by the inside manipulator, as revealed in this instance, was not of the kind to strengthen confidence.

Another event, the reduction in the dividend on the common stock of the United States Steel Corporation, from a basis of four per cent. to two per cent. per annum, had a disturbing effect. While the management has been commended for its conservatism in reducing the dividend when the earnings declined, the fact that there is more than \$500,000,000 of the stock outstanding, distributed among holders numbering very many thousands, some of whom bought the stock when it was selling at fifty or higher, made the decrease in dividends far-reaching in its effect. It is generally conceded, however, that the dividend should have been reduced if not passed altogether.

With other unfavorable events there came the report of the failure of two trust companies in Baltimore, followed in the same week by the failure of a Pittsburg bank, and of another at Allegheny, Pa. Following these came a run on the trust companies in St. Louis, which seemed to have no reasonable excuse. This caused, however, a withdrawal of money from New York and a sharp advance in rates, with a decline in foreign exchange almost to the gold-importing point just at the close of the month.

Whatever may have been the situation a month ago, there is much at the present time to cause a more hopeful feeling. There is a possibility of dearer money in the near future, yet it is based upon the substantial fact of large crops to be moved. In the single case of cotton it is figured that as prices are now ruling it will require probably \$100,000,000 more to pay for this year's crop than for the crop of 1902.

From the October report of the Department of Agriculture on the condition of the grain crops on October 1, estimates of the probable yield have been made, which are very favorable for both corn and wheat. We show the estimate for those crops, and also of oats, with the figures for the previous five years :

YEAR.	Wheat.	Corn.	Oats.
	Bushels.	Bushels.	Bushels.
1898.....	675,148,705	1,924,184,600	780,995,143
1899.....	547,303,840	2,078,143,933	943,387,375
1900.....	522,229,505	2,106,102,516	809,125,969
1901.....	748,460,218	1,522,519,891	786,808,724
1902.....	670,063,008	2,523,648,312	987,842,712
1903.....	659,028,000	2,307,860,000	789,589,000

Were the table extended back a few years further, it would be apparent that this year's yield of all three staples is excellent. The corn crop especially is a bounteous one, while wheat is not far behind the yield of last year. After the apprehension felt and expressed during the period of the final development of the crops, the results now assured must be viewed with considerable gratification.

The movement of the crops will call for money, and the lateness of both corn and cotton has delayed the usual outflow of money to some extent. At the same time the exports of grain and cotton will increase, and should the necessity arise gold imports may be looked for. Cotton exports in September were valued at more than \$21,000,000 as against less than \$2,000,000 in August, while the exports of breadstuffs in September were \$3,500,000 greater than in August. Yet the value of these two classes of exports was \$15,000,000 less in September this year than in the same month in 1902. An increase in later months may reasonably be expected.

Just as the month closed it was announced that \$1,000,000 gold had been engaged for import. While it is probable that the Bank of England will endeavor to prevent any large movement of gold in this direction, still it would not be an unusual occurrence for gold to come into the country during November and December. These months do not compare with September and October as gold-importing months, still at times gold to a considerable amount has come in during these months. The aggregate movement of gold in each of these months during the twenty-three years, 1880 to 1902 inclusive, has been as follows :

	November.	December.
Imports of gold, 23 years.....	\$112,960,010	\$90,227,638
Exports of gold, 23 years.....	45,313,435	75,407,885
Net imports of gold, 23 years.....	\$67,646,575	\$14,819,353

In twenty three years the net imports of gold in November have not averaged \$3,000,000 a year, while in December they have not averaged much over \$600,000 a year. Only once in the twenty-three years did the aggregate imports in November exceed \$10,000,000, and that was in 1900, when they reached \$12,641,988. Twice did the imports exceed \$10,000,000 in December, in 1880, when they were \$16,506,026, and in 1886 when they were \$11,655,807. On the other hand, we have seen \$14,000,000 gold exported in November, 1895, and nearly \$15,500,000 in December of the same year, also \$11,800,000 in December, 1899, and \$16,292,000 in November, 1901.

The domestic production of gold makes the United States in a measure independent of outside sources of supply for replenishing its circulating medium. The report of the Director of the Mint on gold production in 1902 makes the total for that year \$80,000,000. This exceeds the production of any previous year and is \$15,000,000 more than was produced in any year during the period of greatest production of the California mines. Ten years ago the yield of gold in the United States was only about \$33,000,000. Colorado alone now turns out within \$5,000,000 as much as that. The world's production of gold in 1902, as estimated by the Director of the

Mint was \$295,889,600, an increase of \$32,500,000 over 1901, and of \$94,000,000 since 1896.

The silver output of the United States remains practically the same as it has been for a number of years past, being in 1902 55,500,000 ounces. The nominal or coining value is \$71,757,575, but the commercial value is reported at only \$29,415,000, the smallest in thirty years. The world's production of silver in 1902 is estimated at \$215,861,800 coining value, a decrease of \$10,000,000 compared with 1901.

The iron and steel trade has commanded considerable attention recently. It is feeling to some extent the effect of the labor troubles which for some time have checked building operations. Another influence which will be operative for some time to come in all probability is the reduction in the demand for steel rails. The railroads in the last few years have expended very large sums for material used in construction as well as in equipment. To some degree their requirements have been filled, while there is a disposition on the part of the railroads to curtail expenses. A reduction in the price of steel rails and in other products of iron is not an unlikely contingency.

The production of pig iron is being reduced, the capacity of the furnaces in blast on October 1 being 362,824 tons per week, as compared with 369,933 tons on September 1, and 898,189 tons on June 1. The furnace stock of pig iron on October 1 amounted to 506,848 tons, as compared with 208,403 tons on June 1.

The August reports of gross and net earnings of the railroads show a continuance of the conditions heretofore noted. While the gross earnings of 114 roads increased nearly \$16,000,000, the net earnings increased \$5,500,000 each, about fifteen per cent. But included in these gains are the earnings of the anthracite coal roads, which a year ago were hindered by the miners' strikes. Excluding these roads the gross earnings show a gain of \$12,400,000 and the net of only \$2,800,000.

The annual reports now issued by the railroads covering the fiscal year ended June 30 continue favorable and seem to assure a maintenance of the dividends now being paid, possibly some increase. In fact, the Reading Company last month declared a dividend of $1\frac{1}{2}$ per cent. on the second preferred stock, the first ever declared on that stock.

There probably has been no time in the history of the railroads when a greater number of roads were paying dividends than now, while many roads are also paying larger dividends than ever before. That railroad dividends have not been as stable as investors would like to have them is very well known, yet many railroad stocks

have been very good income-earners in the past. In the following table are given the aggregate cash dividends paid by twenty railroads in each of the five-year periods during the last twenty-five years, the total and average annual rate for the whole period and the rate paid in 1902:

There has been some attention directed of late to the deposits of other banks held in the National banks of leading cities. It is known that banks have in many cases solicited the accounts of out-of-town banks, usually paying interest on balances. It may be of interest to note the amount of deposits held by the National banks of the leading cities belonging to other banks and trust companies. The following table shows the amounts for twenty-three cities on June 9 last, compared with June 29, 1900, and July 14, 1896:

	July 14, 1896.	June 29, 1900.	June 9, 1905.

Some changes made in reporting the deposits of banks and trust companies in 1900 make the comparison between 1896 and 1900 not wholly accurate. Still, the increase in those four years was very large. In the last three years there has been a further increase, but in Boston and New York there was a decrease.

The change that has taken place in the direction of more conservative financiering is apparent in the great decrease in the incorporation of large companies. The "Journal of Commerce" for some years past has kept the record of incorporations in the States of New Jersey, Maine, Pennsylvania, New York and Delaware. For

	1905.	1902.	1901.

July.....	106,100,000	469,866,400	238,345,000
August.....	77,650,000	241,879,550	57,450,000
September.....	79,250,000	195,194,900	66,840,000
October.....	67,300,000	244,550,000	164,600,000
Total.....	\$1,516,100,000	\$2,405,688,650	\$3,001,505,000

the month of October it reports incorporations each with a capital of \$1,000,000 or more, having an aggregate of \$87,800,000. This represents not only new promotions but also an increase in the capital stock of the Colonial Trust Company of Pennsylvania. This total is the smallest for any month in either 1903 or 1902. The comparative figures for each of the first nine months in the last three years are given in the table on the preceding page.

"What probably emphasizes," says the "Journal of Commerce," "better than anything else the point that the promotion of new companies is at a low ebb is the fact that the month's record fails to show the incorporation of a single concern with a capital exceeding \$5,000,000."

THE MONEY MARKET.—There was a large movement of money from New York to interior points late in the month, and the effect was evidenced in firmer rates for money. At the close of the month call money ruled at 4 @ 5 per cent., the average rate being $4\frac{1}{2}$ per cent. Banks and trust companies loaned at $2\frac{1}{2}$ per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 5 per cent. for all periods from 60 days to 6 months on good mixed collateral. For commercial paper the rates are $5\frac{1}{2}$ @ 6 per cent. for 60 to 90 days' endorsed bills receivable, $5\frac{1}{2}$ @ 6 per cent. for first class 4 to 6 months' single names, and 6 @ $6\frac{1}{2}$ per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—Deposits in the local banks were reduced nearly \$12,000,000 since October 3, and at the close of the month were less than \$886,000,000. Only once since January were the deposits as small as they are now, and that was on April 11. In February, 1901, the deposits exceeded \$1,019,000,000. Compared with a year ago there is a decrease of about \$8,000,000. There have been changes in the loan account but for the month there is a net decrease of only about \$1,400,000, while compared with a year ago loans have increased \$33,000,000. Loans now exceed deposits by about \$26,000,000. The surplus reserve having reached nearly \$18,000,000 fell to almost \$10,000,000 in the last week of the month, the lowest point reached since last July. The surplus is less than one half of the amount reported a year ago.

MONEY RATES ABROAD.—There was no change in the posted rates of discount of any of the European banks. Open market rates are slightly lower in London and Berlin than they were a month ago and higher in Paris. Discounts of 60 to 90 day bills in London at the close of the month were $3\frac{3}{8}$ @ 4 per cent. against 4 per cent. a month ago. The open market rate at Paris was $2\frac{7}{8}$ per cent. against $2\frac{3}{4}$ per cent. a month ago, and at Berlin and Frankfort $3\frac{1}{2}$ @ $3\frac{5}{8}$ per cent. against $3\frac{5}{8}$ per cent. a month ago.

FOREIGN EXCHANGE.—The sterling exchange market was quiet and steady until near the close of the month, when it declined sharply. The market was affected by dearer money in New York, while the free movement of cotton and grain caused the supply of commercial bills to increase. Rates for sterling are now at the lowest point reached during the year and close to the gold-importing point.

NATIONAL BANK CIRCULATION.—There was a decrease of \$815,000 in amount of bank notes in circulation last month, although about \$1,200,000 of bonds were deposited to secure circulation, the notes based on bonds increasing about the same amount. About \$2,000,000 notes against which lawful money had been deposited were retired. Of less than \$883,000,000 bonds deposited to secure circulation, \$376,000,000 are 2 per cent. bonds of 1930, while \$112,000,000 more of these bonds are deposited to secure public deposits.

Total.....	\$380,173,090	\$381,486,430	\$381,484,830	\$382,726,890

The National banks have also on deposit the following bonds to secure public deposits; 4 per cents. of 1907, \$4,755,000; 5 per cents. of 1894, \$2,132,300; 4 per cents. of 1895, \$11,718,050; 8 per cents. of 1898, \$7,556,620; 2 per cents. of 1900, \$112,451,800; District of Columbia 3.65's, 1924, \$1,894,000; State and city bonds, \$22,191,923; Philippine Island certificates, \$5,800,000, a total of \$168,299,693.

UNITED STATES PUBLIC DEBT.—The principal features of the public debt statement for October are the changes in the bonded debt and the increase in the net debt as the result of the deficit in the month's revenues. More than \$7,000,000 of the 5 per cents. of 1904 were retired during the month, while nearly \$7,300,000 of 2 per cent. bonds were issued in exchange for \$2,800,000 3 per cent. and \$3,500,000 4 per cent. bonds. Nearly 60 per cent. of the total bonded debt now consists of the new 2 per cent. issue. There was an increase in outstanding certificates of \$17,000,000, a decrease in the cash balance of nearly \$11,000,000, and an increase in the net debt of \$2,650,000.

GOVERNMENT REVENUES AND DISBURSEMENTS.—The Treasury disbursements in October aggregated nearly \$52,000,000, an increase of \$13,000,000 over those of the previous month, and of \$5,000,000 as compared with October, 1902. The receipts were about \$47,000,000, a decrease of \$4,000,000 from those of the previous year. The net result is a deficit of nearly \$5,000,000, leaving a surplus of only \$669,000 for the four months of the fiscal year as compared with a surplus of \$13,500,000 for the corresponding four months of last year. Customs receipts since July 1 have decreased \$9,000,000 as compared with last year.

UNITED STATES FOREIGN TRADE.—The exports of merchandise in September were valued at more than \$110,000,000 an increase over those in August of nearly \$21,000,000. More than \$19,000,000 of this is accounted for in the increased exports of cotton, while breadstuffs show a gain of \$2,500,000. Compared with September, 1902, the exports this year show a decrease of nearly \$11,000,000. Here again cotton and breadstuffs account for the entire difference and more beside. Exports of cotton are nearly \$9,000,000 less than they were last year, and breadstuffs \$6,000,000 less. Imports of merchandise in September were nearly as large as in August but about \$6,000,000 less than in September, 1902. The balance of net exports for the month was \$28,000,000 or about \$5,000,000 less than in 1902. For the nine months ended September 30 the exports were \$989,000,000, an increase over 1902 of \$46,000,000, the imports nearly \$759,000,000, an increase of \$57,000,000, and the net exports \$230,000,000 a decrease of \$11,000,000.

MONEY IN CIRCULATION IN THE UNITED STATES.—There was a very large expansion of the money in circulation last month, an increase of nearly \$23,000,000 being reported. Of this \$19,000,000 came from the United States Treasury. The principal increases were gold certificates \$8,000,000, silver certificates \$4,000,000, United States notes \$4,000,000 and National bank notes \$4,000,000.

MONEY IN THE UNITED STATES TREASURY.—The gross amount of money in the United States Treasury was reduced \$8,000,000, while the certificates issued against cash in the Treasury were increased nearly \$11,000,000, making the reduction in the net cash about \$19,000,000. The Treasury lost about \$2,000,000 gold, \$3,000,000 silver dollars, \$5,000,000 United States notes and \$5,000,000 National bank notes.

BANKERS' OBITUARY RECORD.

Barnett.—W. B. Barnett, President of the National Bank of Jacksonville, Fla., died October 21, aged eighty years.

Bissell.—Lebbeus Bissell, Treasurer of the Savings Bank of Rockville, Ct., died October 15, aged over ninety-three years. He had been Treasurer of the bank from the time of its organization in 1858. He was also one of the organizers of the First National Bank and a director of the Rockville National Bank.

Bradfield.—Dr. J. Y. Bradfield, President of the National Bank of Daingerfield, Texas, from the time of its organization, and well known throughout Texas, died October 6.

Jack.—A. R. Jack, Cashier of the State Bank, Coffeyville, Kan., died September 22, aged forty-eight years.

Kellogg.—George Kellogg, for many years Cashier of the Citizens' National Bank, Fulton, N. Y., died September 30.

Lewis.—Bertram D. Lewis, Assistant Cashier of the Ilion (N. Y.) National Bank, died October 14.

Loughran.—John Loughran, President of the Manufacturers' National Bank, Brooklyn, N. Y., died October 6, in his eighty-second year. He came to this country, with his parents, when about fifteen years old. After spending several years in the grocery business, he became interested with the firm of Fraser & Bell in the manufacture of tin. Soon after the organization of the Manufacturers' National Bank, in 1878, he became Vice-President, and in 1884 was elected President.

Moore.—H. V. Moore, of the banking firm of H. V. Moore & Co., Monticello, Ill., died October 4, aged sixty-six years. He had been engaged in banking at Monticello for the past twenty-five years.

Newton.—Otis K. Newton, Assistant Cashier of the First National Bank, Westboro, Mass., died October 6. Mr. Newton was also town treasurer at the time of his death.

O'Hara.—Dr. R. H. O'Hara, one of the organizers of the Grant County Deposit Bank, Williamstown, Ky., and for several years Vice-President, and later President, of the bank, died October 20. He was born at New Liberty, Owen county, Ky., July 5, 1838.

Tracy.—Frank W. Tracy, President of the First National Bank, Springfield, Ill., and one of the leading bankers of the central part of the State, died November 8, aged sixty-nine years. Mr. Tracy was a native of Baltimore, but went to Illinois when a young man. He helped to organize the First National Bank, of Springfield, and was a director of the Chicago and Alton and Baltimore and Ohio Southwestern Railways, and largely interested in other railroad properties. He had been prominently identified with the work of the American Bankers' Association for many years.

Voight.—Robert P. Voight, Vice-President of the National Bank of Commerce, Norfolk, Va., died October 5, aged forty-seven years.

Wilson.—John Wilson, Second Vice-President of the Greenwich Savings Bank, New York city, died October 13, in his ninety-first year.

Winebrener.—Col. David C. Winebrener, President of the Farmers and Mechanics' National Bank, Frederick, Md., died October 10. He fell dead while talking to a friend in his office. Col. Winebrener was sixty-nine years of age at the time of his death.

Woodruff.—Gilbert Woodruff, one of the organizers of the Rockford (Ill.) National Bank, and its President since 1871, died October 2, aged eighty-five years. He was an active business man, and was twice elected mayor of Rockford.

POSITION WANTED.—By a young man, 25 years of age, as bookkeeper in an up-to-date country bank. Salary moderate. Satisfactory reference. Address, Lock Box 35, Loomis, Nebraska.

THE BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SEVENTH YEAR.

DECEMBER, 1903.

VOLUME LXVII, No. 6.

THE RECENT FLOW OF GOLD FROM EUROPE was later than usual, and this is said to be due to the lateness of the movement of the crops. Not that this gold is sent in payment of this year's crops exported, for there has hardly been time for this except with respect to cotton, but because the call on the central banks for money to move the crops has been longer deferred than in most previous years.

As there is now no profitable way of increasing the amount of money on hand by paper issues, the only resource of the central banks when they find their reserves reduced by the demands of their correspondents is to make these reserves stronger by the importation of gold. Estimates of the full amount to be imported during the present movement range from \$10,000,000 to \$30,000,000. While the condition of exchange favors this movement, it is impossible always to judge accurately whether the price of exchange is natural as the result of trade conditions or whether artificially produced by foreign loans. When the central banks can only make good their reserves by supplies of gold, these supplies must be obtained even at a sacrifice. The banks must pay high rates to get what they must have whether or no, and are subject to the same conditions as their customers are in a stringent money market.

The currency of the country to-day is nearer to being on a gold-certificate basis than it ever was. The National bank notes are decreasing in amount, Government notes, legal tenders and silver certificates are practically stationary in amount. All are practically exchangeable for gold, but there is no surplus of any of these forms of money and no prospect of their being increased. It is the gold alone, either as gold coin or gold certificates, that may be increased or diminished, thus furnishing what elasticity there is in the aggregate mass of money.

Whether the ebb and flow of gold from and to our money markets, as they connect themselves with the world's supply, can be depended

upon to meet the changing demands for cash, may be dubious to those who during the past thirty years have seen supplies of paper and silver artificially produced to meet deficiencies, and who have seen the total supply of money in circulation continually growing, and yet witnessed that recurring vacancy at the money centres, always like *Oliver Twist* crying for more.

The surplus revenues of the Government have been blamed for this condition of things, but recent experience, since the Treasury has adopted the policy of depositing largely with the banks and thus preventing the locking up of surplus, when surplus existed, in the Treasury, as well as the still more recent experience since the disappearance of the surplus, tend to a modification of views heretofore held as to the part which the independent Treasury has played in causing stringencies in the money market. Even when there seems to be no surplus which the independent Treasury can be blamed for locking up, the same scarcity of money seems periodically to occur. No doubt the accumulation of cash in the Treasury served to aggravate a tendency toward stringency, and produced a setback or panic sooner than it would otherwise have occurred, although the same point of stoppage would have been reached later had there been no surplus locked up.

It seems to be nearer the truth, that the great competition among banks, their eagerness to make every dollar entrusted to them profitable to their stockholders, as well as the great opportunities for loaning money afforded by the spirit of enterprise and speculation, induce the banks to extend just as long as they can. The public seem generally to see danger before the banks do, and this perception of danger is shown by depression of prices on the stock exchanges. Then the banks take alarm and immediately put up their rates and set about strengthening their reserves. The eagerness with which the weekly statements of the banks are inspected and the manifest consequences of good or bad statements in the stock markets indicate the mutual action on each other of the banks and the business public.

It is highly probable that in the past the banks have been encouraged to approach nearer to the danger limit than they otherwise would have done by the hope of help coming from the Treasury. In storing up a surplus reserve the Treasury had been securing a means of helping the markets when danger actually appeared. From this point of view it might be argued that the independent Treasury was not without its advantages. If the banks would not learn to be more conservative and begin to put on the brakes gradually and thus check a too active spirit of enterprise, then it was not so bad a thing that the Treasury accumulation checked them sooner than they would have checked themselves. At the same time the Treasury was in a position

to render help when the danger point drew near. But the evil of it lay deeper, in that the banks forgot to rely on themselves and acquired more recklessness the oftener the Treasury gave relief. The continual additions to the currency of the country, whether in paper or in silver, tended to increase the improvidence of the banks, on the same principle as the periodical locking up and pouring out of the surplus. As long as the banks have an easy and comparatively inexpensive way of replenishing reserves depleted by improvident, not to say reckless, habits of extension, so long will they refuse to adopt more careful methods.

For this reason, apart from others, it appears probable that the permission to issue an asset currency, even if such issues were confined to what are called emergencies, would not cure the banking customs which result in periodical reduction of cash reserves to the danger limit. If the banks got into trouble, to issue an asset currency would cost them nothing and they would learn no lesson, but on the contrary would be more set in unwise ways. But when by the abolition of the Treasury surplus, either because Government funds are deposited with the banks or because receipts and expenditures balance, with no way to issue new paper money, the banks are compelled to replenish their reserves by obtaining gold by importation, thus putting themselves on the same footing as the banks of other commercial nations, then they will discover that it costs them something to let themselves come too near to the danger point. After receiving one or two wholesome checks of this kind they will find it necessary to seek to control speculation and not submit to be controlled by it.

It is very true, even when reserves are dependent solely on the gold supply, that there are times when favorable trade balances will enable the banks to recoup themselves for unwise management. But experience with a currency depending for elasticity solely on the gold supply will tend to make bankers more careful in the long run than when they rely on makeshift credit devices. Much more could be said on this point. But the main thing for the bankers of the country to learn is to rely on their own wise management rather than on Treasury assistance. It is believed that the present approach of the money of the country to a condition when it is dependent upon gold alone for elasticity is more likely to induce the conservatism our bankers should cultivate, and lead them to be more faithful supporters of the general welfare in trade and speculation.

BANK MONEY ORDERS received a prominent place in the discussions at the bankers' conventions held this year, and it would seem that the banks are going to make a strong and more or less

united effort to get a larger share of this business than they have had heretofore.

All these discussions seem to deplore the small profits the banks obtain from the sale of exchange, and every plan thus far proposed contemplates an increase in the earnings of the banks from charges made for furnishing drafts, or money orders as they are to be called, for remittances. It is said, and no doubt with truth, that the banks are better equipped for transacting this business than either the post office or express companies, and that they ought, with proper efforts, to get the bulk of this business. Banks are naturally the proper agents for carrying on such transactions.

The bankers have been agitating this matter for many years, and at last seem to be making some headway in accomplishing their plans. It is said that the money orders issued annually by the banks and express companies aggregate upwards of \$500,000,000. This is a prize worth contending for, and no wonder the banks are seeking eagerly to find the surest method of capturing it.

There is an easy way by which this might be done: let it be known that the banks will issue drafts or money orders without any charge whatever, and the competition of the post office and the express companies would disappear. It is possible that such a step would be even more profitable than the revenues that will be derived from the sale of the exchange under the new plans that apparently find favor, and from the announcement made some time ago by the Bankers' Money Order Association it would seem that this is the view that is held in one quarter at least. This association not only offers to supply banks with money orders without charge, but to permit the banks to remit for these orders, by checks on themselves at stated intervals. Here is a recognition of what seems to be the fact—that the use of money for the average life of a draft or money order is where the real profit lies; and it may be that the banks, in seeking for the profit from the sale of exchange, instead of making their customers' checks available everywhere, or possibly going further and furnishing exchange free to everybody whether depositors or not, as is done in some foreign countries, have been like the dog crossing the stream and grasping at the shadow of the bone in his mouth.

The question of greatest moment would seem to be to find that policy that will most surely attract the largest amount of money into the banks, thus increasing the volume of loanable funds. To put a tax on country checks or to devise a means of getting as big a profit as possible from selling exchange, may not be the best way to achieve this result. It is of course only right that the banks should contend for the profits from the money-order business now made by the post office and the express companies. But the problem seems to be larger

than this. It involves the whole subject of checks and drafts and the profits to be obtained from increasing the service which the banks render to the community. The country check problem, which has been dealt with in such different ways, is far from any definite settlement. An interesting discussion of the subject took place at the recent annual convention of delegates from the various chapters of the American Institute of Bank Clerks. We reprint this discussion in full in another part of this issue of the *MAGAZINE*.

THE BANK MONEY ORDER was one of the important topics under discussion at the convention in San Francisco. The successful development of bank money orders would undoubtedly add to the profits of the banks a large proportion of the profits now obtained by the Government postal service and the express companies.

The address of L. P. HILLYER was a most suggestive one, pointing out the real difficulties that lie in the way of success. The main obstacle to the successful acquisition by the banks of the money-order business, now so efficiently carried on by the post office and the express companies, is the same that has prevented the issue of an asset or credit currency, and it is the lack of association and affiliation among the independent banks which have been developed under the free banking laws of the United States. If Mr. HILLYER's address does not distinctly specify the conditions to which every bank in the country would have to conform in its relations with other banks, in order to make a bank money order as acceptable to the public as the money orders issued by the post office and the express companies, his address is nevertheless most suggestive.

The man who now goes to the post office or the express company for an order does so because he has reason to have perfect confidence that when the order reaches its destination it will be cashed at par. Moreover, the places where he can procure these orders are conveniently situated and are to be found at points where there are no banks. Probably to persons desiring to transmit money, by money order, the post office is the most convenient when location alone is considered. That is, on an average a post office can be found within the shortest distance, or at least post offices can be found in places without express offices or banks. In this respect the express office has the same advantage over a bank that the post office has over the express office.

The banks to place bank money orders on the same footing with those of the express and post offices must have some arrangement by which an order obtained at one bank will be paid by any other bank throughout the United States located in or near the place where the money is to be sent. Several of the State associations have started

arrangements for the mutual recognition of bank orders sold by their members. But these efforts, it would seem from Mr. HILLYER's remarks, have proved too local. The orders do not recommend themselves to the public as equally convenient with express and post office orders for universal remittance.

A resolution was adopted by the convention that the American Bankers' Association adopt a bank money order system, and that the president appoint a committee of five to devise a plan by which members can be furnished with uniform bank money orders and proper advertising matter in accordance therewith. The report of this committee is to be made to the executive council, and the council is empowered and requested to authorize such expenditures as is proper to enable the committee to carry out its recommendations.

The effect of the passage of this resolution, which before presentation to the convention appears to have had the approval of the executive council, seems to be to commit the association to introduce a money-order system among the members and to pay whatever expenses are necessary to do so. This may be found to be a larger contract than appears on its face, and may add very appreciably to the already great expenditures of the association. Great care will be necessary to avoid what Mr. HILLYER styles wildcat orders, and it is difficult to see how instances of this kind can be prevented, except by the adoption of some system of guaranty, generally participated in by all the members, to assure the payment on presentation by any member of an order drawn by any other. Mere membership in the association is not necessarily an assurance of the solvency of the bank or banker. On payment of ten dollars, since the increase of dues, anything calling itself a bank, or any person calling himself a banker, can become a member. The association makes no examination of the affairs of its members, nor has it had, heretofore, any occasion for doing so. But if all the members join to guarantee the payment of an order drawn by any member, it does not take a conjurer to foresee that considerable machinery will be necessary to enable the association both to assure itself of the solvency of its members, and to impose and collect a suitable guaranty fund. Moreover, there is the question as to how the profits are to be divided. The members who sell the orders, which are to be paid without discount by any other member, are certainly not entitled to the whole profit.

This should be pooled and divided among all who lend their assistance to sustain the credit of these money orders and who contribute to the guaranty fund. What amount of accounting machinery this distribution of profits will require will probably have to be considered by the committee.

It is easily conceivable that unless proper precautions are taken, the money-order business may be made a vehicle for sharp practice. A man without the fear of man or God before him may allege he is a banker, pay ten dollars to the association, subscribe to a guaranty fund, and proceed to sell money orders at advantageous points, and so obtain considerable money under false pretenses. If such fraudulent orders are not paid, away goes public confidence in bank money orders. If they are paid, losses are entailed on the members of the association.

The amount annually gained as profit by the post office and the express companies is estimated by Mr. HILLYER from official returns to be \$3,000,000. This is a very respectable fund to be added to the profits of the banks. If the plan can be successfully worked out by the association, the expenses incurred could very justly be reimbursed to the association from the profits of the business, as well as the expenses of the bureau, for the oversight which would have to be maintained over the system by the association. Probably the scheme would not be beyond the powers of the association as laid down in its constitution. It would no doubt come under the general object of the association, to advance banking interests. Before going into it the magnitude of the undertaking should be well considered. It is not, as might appear from the resolution, a mere matter of furnishing blanks and advertising matter. No one can fully see in advance what might develop from placing the association in this particular matter in the position of guardian of the credit of seven thousand members, with the probability, if the plan worked successfully, of attracting practically all the banks and bankers of the country into the membership. The bureau of the association might, as its activities developed, come to occupy a position of supervision over all the banks of the country, somewhat analogous to that of the Comptroller of the Currency over the National banks. But instead of being backed by special law powers, as is the Comptroller, the association would be enabled to enforce its rules only by appealing to the self-interest of the banks. It might be difficult to maintain its authority. If experience should prove that the independent banks throughout the country could thus be welded together by a common interest of this kind, other improvements in the banking business which now seem impossible of attainment might be brought within the bounds of possibility.

Although the initial step has been taken by the adoption of this resolution giving practically a power to the committee only limited by the funds the executive council deems best to allow them, it is most probable that this committee will shrink from committing the association to the performance of such far-reaching and novel func-

tions as the introduction of a satisfactory system of bank money orders entails. Success is not impossible, but it involves great effort, and it is not likely that the necessary effort will be made by a committee of bankers, each of whom is no doubt fully occupied with the affairs of his own bank. The only possibility of success lies in inaugurating a system of machinery, and placing it in the hands of suitable men who can devote their whole time to the necessary work.

THE COMMITTEE APPOINTED by the executive council of the American Bankers' Association to revise the dues paid by the members, reported in favor of an increase in the dues, which on the basis of the present membership will add about \$35,000 to the revenues of the association. The report was approved by the executive council and ratified by the convention.

The reason given for this increase was that during the previous year the income had been a little over \$70,000, and the expense account over \$90,000, a deficit of about \$20,000. The committee thought that unless the work of the protective committee were curtailed, this increase of dues was required, and that the protective committee had shown such practical results, and the work being done is such a striking feature of the association, that the logical duty of the committee was to frame a plan for an equitable increase of income.

In regard to the protective feature of the association there can be no possible disagreement with the conclusion of the committee. As to the increase made, there is little doubt that it is equitable. Heretofore private bankers, brokers and banking firms, and banks and trust companies with a capital and surplus of less than \$50,000 have paid \$5 per annum. Last year there were nearly three thousand (2,944) of this class included in a membership of 7,065, or closely approaching one-half of all the members. The dues of this class have been doubled, and perhaps this, although a proportional increase has been made in the dues of banks with larger capital, may seem to bear too harshly on these smaller institutions, and that it might have an effect in causing many of them to discontinue their membership. When a previous increase of dues was made, in 1895, if our recollection serves, the dues of these smaller institutions were not increased, while those of the larger institutions were. This had the effect of enabling the small banks to avail themselves of the protective feature of the association at a very low rate. Moreover, these small banks were those peculiarly exposed to the operations of burglars, not being so able to afford the most expensive appliances for protecting their cash.

The last report of the protective committee indicates that the check-raiser, forgers and confidence men who are more apt to take the larger banks for their prey, have been almost eliminated by the operations of the protective committee. On the other hand, the class of petty burglars known in thieves' talk as "yeggmen," seem, like the fleas of Egypt, to have overspread the land, and the smaller country banks have in most cases been their easy victims.

The protective committee having, temporarily at least, and it is to be hoped for some time to come, laid down their heavy guns from the lack of large game, have now taken up the shotgun, more appropriate to the work of suppressing the small but more numerous depredators. The territory to be protected is greater, and the ammunition expended in this scattering warfare will probably be more expensive. It will be the smaller banks who will receive the greater part of the benefit, and therefore they have no great reason to grumble at some increase in the annual charge they pay, which even at ten dollars, if there were no other advantage from belonging to the association than the protection it thus gives, would be very small.

In this connection there is room for speculation as to what will take place when, through the efforts of the protective committee, and the improvement in safes and vaults, the whole criminal class that preys on banks is suppressed. Already we have the information that even the yeggmen respect the sign that points out a bank as a member of the association. Banks that lose or neglect to display their signs are robbed; other banks that properly keep them in sight are let alone. It will be a matter of some curiosity to note a gradual reduction in the amounts paid to detectives, as the criminal classes are gradually suppressed. It is said that in countries where a bounty is offered for the suppression of wolves, much ingenuity sometimes has to be exercised lest the breed of wolves become extinct. But there is hardly any hope that the yeggman will like the dodo entirely disappear as long as he has seven or eight thousand banks outside of those belonging to the association upon which to develop and exercise his skill.

On examining the report of the treasurer of the association it will be noticed that the expenditures of the year were \$85,539.33, and that \$38,199.65 of this was expenses of the protective committee. There is left \$47,339.68. Little can be learned from the detailed items of which this account is made up, except that the business of the association seems to be conducted on a scale worthy of the dignity of the institution. The two main items are the expenses of the educational committee, \$7,693.92, and salaries, \$15,656.75. This latter amount is larger than the whole annual dues reported as collected during the year 1895. The average paid by each member in that year was about

eight dollars (\$8.25). Last year, with 7,065 members, the average paid by each member was nearly eleven dollars (\$10.83). It might naturally be supposed that as the membership increased, the expense to each member would be cheapened. Apart from the protective feature, there seems to be no very good reason why the work of the association should be more arduous or expensive than it was in 1895. Although some work in new directions has been undertaken, yet an income six times as large as it was in 1895, anyone might be led to think, would be sufficient for such new work as is reported.

In increasing the dues at this time it is to be feared that many will think the executive council has not acted with its usual wisdom, especially as the burden will be most severely felt by the small banks which make up close to half of the membership of the association. While everyone will agree with the committee that the protective fund should not be curtailed, it is at least open to speculation that with the present dues there would be no necessity for this, if economy in other directions were carefully practiced.

THE MEETING OF THE AMERICAN BANKERS' ASSOCIATION at San Francisco was distinguished by the large number of delegates in attendance and the importance of the business brought before the convention. Perhaps the most important matter discussed was the report of the committee on fidelity insurance. This report embodied a plan for the taking up by the association of the insurance and bonding of officers and employees of banks through the agency of the association. To effect this an amendment to the constitution was recommended. The report and recommendation of the committee, as is usual, were referred to the executive council, but the council, by a vote of twelve to eight, was adverse to the change in the policy of the association which the adoption of the recommendations of the committee would necessitate. When the matter came before the convention, where a two-thirds vote of the delegates present is required to secure the adoption of a constitutional amendment, the proposition was rejected by a vote of 133 to 98. The majority of the delegates who voted were in favor of adopting the plan of the committee, but not a sufficient majority.

Apart from the merits of this particular question, it is doubtful whether the real sense of the delegates was expressed by this vote. There is apparently no provision in the constitution of the association defining what number of delegates in attendance at any annual convention shall constitute a quorum. The founders of the association did not, as has often before been remarked, intend that these annual conventions should be voting machines. In fact, it would be very

difficult to make them so and have them fairly represent the great body of bankers composing the association. The secretary's report showed a paid membership of 7,065 banks. The number of delegates registered showed that only 751, or about one-tenth of the membership banks, sent delegates. On the question of fidelity insurance only 231 of these delegates voted—less than one-third. Nothing can be clearer than these figures to show that, under the present constitution of the association, it is simply a matter of chance whether a measure shaping the future policy of the association will pass or not. It may be one of the utmost importance and of the greatest advantage, or it may be of the most unwise and destructive nature. Only one-third of the delegates in the above instance cared enough about the matter in question even to be present when it was considered and vote for or against.

It is evident that the great body of delegates are perfectly willing to trust the decision of important matters touching the life and welfare of the association to the executive council. This is as it should be, not only because it is in accordance with the designs of the founders of the association as embodied in the constitution, but also because this is the only way an association of which all the bankers in the United States are potentially members can be effectually governed. This becomes more evident as the association grows and approaches to its ideal of including all the bankers within the territory of the United States in its membership. The larger the number of members the smaller will be the proportion of those who send delegates to any one convention to the whole number that could send delegates.

An association of bankers should undoubtedly be conducted on banking principles. The executive council, with its force of secretaries and clerks, corresponds to the directorate of a bank. The individual banks members of the association are analogous to the stockholders, in that it is in their power to control the executive council by electing its members. Those who have viewed the annual conventions as being of the nature of a legislative body have not thoroughly understood the principles on which the success of such an association must rest. If members of the association are dissatisfied, the proper course for them to pursue, apart from discontinuing their membership, is to use their influence to elect members of the council who will manage affairs in accordance with their wishes. The executive council is not infallible, and even when it uses the best of judgment cannot expect to be above criticism. It is not within our province to point out at this time the defects in the constitution and management of this body.

In this instance the decision of the council against the taking up by the association of the fidelity insurance business was assuredly

right. The association would be very unwise to set itself up as the competitor of any of the institutions upon which it depends for its membership. By taking up fidelity insurance business and competing with the present guarantee companies, it in reality does this very thing. In principle it is the same as if the association should start a large bank in New York city to act as the correspondent of its members. The association ought not by any course of action arouse the hostility of any class of established institutions which might be used to antagonize its growth along legitimate lines.

Some years ago the association very wisely abandoned the printing of advertisements in its various publications, because the legitimate banking publications regarded this as an infringement on their sources of revenue. These publications, or many of them, naturally exerted their influence with the banks to make them dissatisfied with the association, and the growth of the latter was undoubtedly greatly retarded by this influence. For the same reason it would not be wise for the executive council to publish a weekly or monthly or quarterly paper or magazine. The hostility of the present guarantee companies is much more to be dreaded than that of the banking publications, because in undertaking the guarantee business the association would lay itself liable to mischances that could very easily be used to discredit its operation.

That the present guarantee companies very justly regarded the plan of the committee if adopted as dangerous to their business, was plainly manifested in the convention. In the protective line the association has done good work and advanced its interests, because it has not antagonized but encouraged and given support to the existing agencies for the detection and prosecution of criminals. The same may be said of the educational feature of the association, of its labors to secure uniform laws in respect to negotiable paper, and of its efforts to improve the currency. All these activities are such as lie outside of the sphere of ordinary private enterprise and are obviously beneficial to the financial institutions of the whole country. In initiating new work for the association this principle of avoiding the appearance of antagonizing the business of the institutions eligible to its membership should always be kept in view. If this had been done, the committee having the question of fidelity insurance under consideration would never have been permitted to go so far as to present such a report. It was proper enough for this committee to consider the manner in which this business was carried on so as to arrive at good forms of guaranty, and to obtain a just average of rates. But the committee went too far when it recommended placing the association in the position of an actual competitor of the guarantee companies already in business.

THE SPECIAL CURRENCY COMMITTEE appointed at the convention of the American Bankers' Association in New Orleans last year submitted its report to the convention in San Francisco, after the report had been approved by the executive council. The report confined itself to three definite recommendations, and to a general statement. The recommendations were that the funds of the Government should be deposited with the banks, whether such funds were derived from internal revenue or customs; that the limit of retirement of National bank notes to three millions of dollars per month should be removed, and that an emergency circulation, subject to a tax of six per cent. should be issued upon securities deposited with and approved by the Secretary of the Treasury. The report concludes by refusing to recommend any steps that would tend towards a return to the miscellaneous currency which prevailed before the war, or any step which will disregard the history of finance among the commercial nations of the world, or the issue of any note not redeemable in standard coin of the United States.

It will be seen from this that the committee confined itself very closely to what Secretary SHAW styled axioms. It is remarkable that such a colorless report should arouse any debate at all in the convention. Evidently some of the delegates were disappointed with a committee appointed with such a flourish at New Orleans, and that was expected to prepare an elaborate treatise on the various currency plans which have been subjected to the test of experience, pointing out the virtues and defects of each, and finally concocting from the mass a plan which might be safely applied to our present financial conditions with a reasonable hope of acceptance and successful operation. These delegates seemed to feel that their committee had shrunk from the task, and that the trite and platitudinous report presented was the measure of their fears or their indolence.

To the disinterested spectator it appears that the committee ought not to be blamed for refusing to meet the extravagant expectations which were formed in regard to their labors. In fact, that they should have neglected so tempting an opportunity to make a high-sounding and wearisome resume of the debris of the currency arguments which have been before the public for the past quarter of a century, is very much to their credit.

The recommendation for an emergency currency, spoken of above as an axiom, is only an axiom in the sense that everybody seems to agree that there should be some way to supply currency in emergencies. The way in which it should be done has by no means been agreed to, and the method hinted at in general terms by the committee was criticized in the convention; nor was there any better way pointed out by the critics than the issue of the emergency currency

by the clearing-houses. After voting down an attempt to return the report to the committee for greater elaboration, with instructions to watch such currency legislation as might come up in Congress in conjunction with similar committees appointed by the State bankers' associations, the convention adopted the committee's report.

One thing is plain by this time, and that is that the conventions of the American Bankers' Association afford no opportunity for any thorough and exhaustive discussion of a question in which debate may take such wide range as it necessarily must in regard to the currency. A session of an hour or two is entirely inadequate for even an amicable interchange of opinion. But even if there had been full opportunity for an extended debate, it is highly improbable that it would have had any result tending to edification.

If Congress can not or will not legislate in order to bring about the relief from the periodical changes in rates so much dreaded by bankers, bankers will have to learn to adapt themselves to existing conditions. They should not do business in a way that exposes them to danger from sudden fluctuations. It is probable that the best bankers take this view of the matter, and do not allow themselves to be carried helplessly on the so-called tide of prosperity with the vague hope that when difficulties arise the Government, Congress, or the clearing-houses will, in some miraculous way, help them out of disaster.

It would, of course, be very convenient if an emergency currency could be obtained on securities which are not sufficiently attractive to draw ordinary currency from its hiding place in time of panic. But all experience points to the fact that such a currency is more or less an iridescent dream. Even the clearing-house certificates used in previous panics, as their real operation becomes better understood, while they may save the face (as the Chinese say) of the banks, do not really meet the demands of the public. In fact, the best authorities recognize that the taking out of clearing-house certificates is a covert or disguised suspension. An emergency circulation issued to banks by the Government on securities which are otherwise inconvertible into cash, is merely a loan of Government credit.

The cause of the recurrence of stringent markets is as much the manner of doing business by the banks of the country as it is the fault of the currency. If the banks used their reserves and made their loans with a due regard to the cash demands liable to be made upon them, not only in the best but in the worst of times, and abandoned vague dreams of the possibility of the Government or the clearing houses helping them out, they would never need such help. It is the feeling that in some way help will come when needed that induces bankers to extend themselves until they are beyond help.

The present temptation of profit is yielded to without regard to the possible future.

Before the war, when the country had the miscellaneous currency referred to by the committee, the banks also had the power when emergencies arose to issue notes without limit, but this power never saved them. They met the demands of depositors perhaps, but fell before the demands of their note holders.

It is believed that the knowledge that the currency of the country is an amount fairly fixed, and that it can only be increased by the natural increase of the stock of gold, will render the bankers of this country more and more safe and conservative in their methods of business. Their conservatism will communicate itself to the business public and even to speculators.

There is as great a fallacy in the belief that wealth can in the long run be acquired by some magical financial combination as there ever was in the belief in free silver. The recent craze for speculative profits was of exactly the same nature as the craze about the 16 to 1 silver coinage or the greenback craze. The only way to cure a financial heresy when it has once gained headway is by letting it run its course.

The silver heresy was cured by the panic of 1893, and the consequent stoppage of silver purchases. After the panic of 1893 there were some who recommended more silver, just as now more currency is called for as a remedy for over-speculation. No doubt the first symptoms of 1893 might have been averted by the free coinage of silver, but the last state of the country would have been worse than the first.

If Congress this winter opens a way for currency issues to any great extent, a revival of the speculation now so much deplored would follow, and might proceed to a point beyond remedy.

THE ADVANTAGES OF THE AMERICAN SYSTEM of free and independent banks in keeping up a natural and wholesome competition are very great to the business public. But, as has been conclusively shown by the history of banking before the war, there comes a point at which the powers granted to these independent banks must be restricted. Theoretically the bank note is in principle of the same nature as a credit on the bank's books; in other words, as a deposit account; that is to the bank. The statement has been made that it would be indifferent to the banks whether their credits were in the form of deposits or circulating notes. But in practice the circulating bank note form of credit has always proved liable to abuses from which the deposit credit is almost free. Since the war banks have

gone into the discount and deposit business, with hardly any special legal restrictions, and there has been comparatively little abuse. In the public mind a check is always distinguished from real money. A person who takes a check in payment knows that it is not money, until it is paid or accepted. But a bank circulating note, although it is merely the bank's check drawn on itself, has the occult quality of making the public forget that it is merely credit, and passes as if it were money. It is this innate power of concealment of its true nature that makes the circulating note a more dangerous form of bank credit than the check. The life of a check is so short that a bank can take no liberties with the reserves of cash it must keep to insure its payment. Checks require no special machinery to insure their presentation for redemption. Circulating notes without organized methods of securing redemption might pass from hand to hand until they were worn out. The Suffolk banking system is an instance of the form of organization for securing the redemption of bank notes, to protect the public from the banks and the banks from each other. With the circulating note each bank is tempted to force as much of its credit as it possibly can upon the public and its unwilling competitors in the banking business. In order to understand fully the effect even of a restricted asset currency it is necessary to consider what would happen if the United States banking law should remove all restrictions on the issue of circulating notes by National banks, and make them as free to extend credit by notes as they now are to extend their deposit accounts. With no special provision for redemption, every bank would have to protect itself and probably machinery for redemption would be inaugurated by bank combinations greatly superior in its scope and system to the Suffolk system.

There is reason to believe that whatever the expense incurred the banks would protect themselves, and in course of time and to a certain extent this protection would be enjoyed by the business public. But with such a system of redemption perfected, the banks would find little profit in circulating notes, and perhaps might discover that they were a much more expensive form of extending credit than a deposit account, in that the notes would cost more than checks, and in that the reserves kept to properly protect them would be much greater. Under a rigid and strict system of redemptions it is probable that the banks would very seldom use their note-issuing function. It would be more difficult for the Comptroller of the Currency to prevent fraudulent issues. It is in fraudulent issues that the great danger to the public consists and to a less extent to the banks.

All the advocates of an asset currency insist on efficient means of redemption, but no one of them has as yet described any method which recommends itself as likely to prove feasible.

PAYMENTS ON ACCOUNT OF THE PANAMA CANAL.

The events taking place at Panama, while interesting politically and from a diplomatic standpoint, will also be closely watched from a financial standpoint. The construction of an oceanic canal by the Government of the United States is a great undertaking, involving an effort almost equal in magnitude to carrying on a war. It has been estimated that the cost of completing a canal over either the Panama or the Nicaragua route will be in the neighborhood of two hundred millions of dollars. Nor can an estimate of this sort in regard to an undertaking of so peculiar a character, where unexpected difficulties both physical and moral are almost sure to arise, be accepted as absolutely precluding the possibility of a much greater expenditure of money before the canal can be completed and operated. Even two hundred millions is a great investment for the Government to make, especially when there is absolutely no certainty that the canal will for a long time return any interest on the investment. Of course, the majority of the people of the country, guided by what they have learned about the commercial and strategic advantages which it is generally alleged will result from the quick passage of vessels of all kinds from ocean to ocean, seem to have concluded that somehow the canal will be a paying public work, and that the greatness and prosperity and tax-paying power of the nation will be augmented by it. No one would want the Government to waste its powers on a scheme which did not promise to be a general betterment.

Apart, however, from the ultimate returns to be expected in the future, the interest of the country rests more immediately upon the effects which so great an undertaking will have upon the business and monetary condition of the business public while the canal is in process of construction. At present it is far from certain when this construction will become an assured fact. Without expressing any opinion as to the diplomatic conditions which still surround the subject and the degree of legislation that may yet be necessary, it is sufficient to say that at present the probabilities seem to be in favor of the belief that the canal project in some form will be realized. At least it is sufficiently imminent to cause bankers and financiers to have it in mind in all their calculations and enterprises for the future. Every one knows how the prospect of war, with its demand for material supplies, either enhances or depresses business activity, and this great undertaking must have effects of the same kind.

If affairs with either Panama or Colombia are satisfactorily settled, there comes first the effect of the payment of forty millions to the French company and the payment of other millions to the government whether that of Colombia or of the new Republic of Panama, whichever the deal is eventually concluded with. All the past summer while the financial world was expecting from day to day the ratification of the Hay-Herran treaty by the Colombian authorities, a watchful eye has been kept on the means which would be taken to transmit the forty millions of gold to France to say nothing of the ten or

more millions to Colombia. It was customary to say early in the season, before the great stock panic, that this could be done without causing a ripple in the money market. Optimistic views of the financial strength of the money markets then prevailed, and suggestions that it would be better to provide for the French payment by a bond issue than to attempt to withdraw so large a sum from our gold stock were scouted at. Since then, to say the least, our money markets have had a shock, and at the present time financiers are looking eagerly for supplies of gold from abroad to relieve the pressure at the great money centre.

Suppose all legislative and diplomatic preliminaries were satisfactorily settled, and the forty millions became at once due and payable to the French company, could this payment be made in gold withdrawn from the stock on which the currency of the country is based, without causing serious effects in the money market? Nor is it probable that conditions will so improve as to make it possible to spare so much gold without any chance of replacing it, for several months to come.

On the other hand, if the payment be made by a bond issue, even if the bonds are immediately returned to the country and sold for gold, it would be possible to replace the gold by an issue of National bank notes based on these bonds.

The uncertainty of what method will be pursued, and the doubt whether or not any will become necessary, hangs over the money market and unsettles men's minds in regard to what steps they shall take in their ordinary business.

But this is merely a preliminary. After the United States has acquired the free possession of the territory and rights involved, then comes the construction of the canal. There are now \$200,000,000 two per cent. bonds to be issued. Every one must understand by this time that these bonds could not be marketed at par were it not for the provision that they may be used as a basis for bank currency. With such an issue more or less imminent, what prospect is there that any plan for changing the principle upon which our bank currency is now founded will or ought to receive serious consideration? Asset currency and emergency currency excite little interest so long as there is a near prospect that the base of our present bank currency may be extended by perhaps, including the French and other payments, with the bonds issued for the cost of the canal, \$250,000,000. If these bonds were marketed all at once, there would be a greater increase of National bank currency than has taken place since 1900. But here uncertainty again prevails. How fast will these bonds be marketed? If the payments to the French company and the indemnity to Panama are provided for by bonds, these bonds, together with those necessary to start construction, may amount to \$100,000,000, subsequent issues being made as necessary. If the payments for franchises and territorial rights are made in gold taken from the general circulation, then to preserve just the *status quo*, by replacing the gold with National bank circulation, the Government should issue at least \$50,000,000.

It can easily be seen, from the foregoing considerations, how Congress and the Administration, in preparing for the construction of the canal and in the actual construction, have it in their power to dominate the currency of the country. They may by free issues cause an inflation to which the inflation succeeding the act of 1900 will appear a trifle. They may dole out the bonds just as fast as is necessary to preserve the *status quo*, or by injudicious

attempts to pay the French company in gold they can even cause a serious stringency in the money market.

While every one no doubt has great confidence in the wisdom and high-mindedness of the present Administration, reflection at once convinces that the construction of the canal places in the hands of Congress, and of the Administration that carries out the decrees of Congress, a power either for good or evil seldom entrusted to any previous Administration. This undertaking has been compared to a war. In carrying on a war an Administration is exposed to chances and risks which, in the judgment of reasonable men, excuses it for a certain degree of loss and disaster which have to be borne by the general public. Chance enters largely into the successful conduct of a war. But the construction of a canal is more like a game of pure skill, in which the participant can be justly blamed if things go wrong. It can then be seen how intimately the financing of the canal is connected with the general monetary condition of the country and how the latter may be unduly elevated or unduly depressed, or kept in demoralizing suspense, according to the course and management of events which have to do with what may be styled simply preliminary. But when the question of the furnishing and transportation of materials is taken up, there is a still broader field for speculation as to the effect of the construction of the canal upon the financial prosperity of the country during the next few years. Already the contractors throughout the country are figuring on the possible chances for profit in taking parts of this national job. The demand for material and machinery of all suitable kinds will be very great, and there is little doubt that there will be full opportunity for testing the practical skill of American engineers and contractors. A large share of the money spent on the construction will come to this country, and the demands for various kinds of material must have an appreciable effect upon the appropriate manufacturing interests.

Whenever a great undertaking, like the construction of this canal or a war, seems to be imminent, the period of suspense previous to the arrival at certainty is one of doubt and hesitation in regard to ordinary enterprises. Just as anticipated changes of tariff by Congress are said to give pause to the interests that may be affected, so this great canal scheme hanging in the near future, but still more or less uncertain, throws a shadow more or less dark over the sun of confidence. It is to be hoped that the question may be settled quickly one way or the other. The importance of the canal may have been exaggerated, and it may make little difference whether it be constructed or not; but if it is to be constructed, the sooner the work is commenced the better for the whole country.

BANK WANTED IN HONDURAS.—An excellent opportunity exists for the establishment in Tegucigalpa of a bank run on a fair business basis. In the quarter ended December 31, 1902, the receipts from exchange amounted to 1,937 pesos (\$743); from interest and discounts, to 42,364 pesos (\$16,268); from commissions on various deals, to 2,296 pesos (\$882)—making a total of 46,597 pesos (\$17,893). The disbursements during the same quarter were to the amount of 12,644 pesos (\$4,855), leaving a net profit to the bank of 33,953 pesos (\$13,038) in three months. Few towns of 12,000 inhabitants in the United States can show a better balance for three months' business. Interest on loans is calculated at two per cent. per month, the interest compounding from month to month.—*Alfred K. Moe, Consul, Tegucigalpa, Honduras.*

THE RELATIONS OF LABOR AND CAPITAL.

[In the opinion of many bankers and others the present relations between labor and capital are a menace to the continued prosperity of the country. Believing that a full discussion of the subject will tend to a right settlement of existing difficulties, *THE BANKERS' MAGAZINE* has secured a number of special articles from the representatives of both sides of the controversy. The first article, published in the November issue of the *MAGAZINE*, was contributed by David M. Parry, President of the National Association of Manufacturers; also President of the Citizens' Industrial Association of America, recently organized. We present in this issue the views of Samuel Gompers, President of the American Federation of Labor. Subsequent papers will state the views of labor leaders and others.]

THE POSITION OF ORGANIZED LABOR.

BY SAMUEL GOMPERS, PRESIDENT AMERICAN FEDERATION OF LABOR.

We have for years advocated, and shall continue to advocate, without the slightest fear, the right of labor—nay, the duty of labor—to withdraw its patronage and favor from its enemies, and to bestow them on its friends. In other words, we insist upon the right, legality, and morality of peaceable boycotting.

No man, we hold, can compel another to trade with him, to have friendly intercourse with him, or to confer benefits upon him.

We have a right to choose our tailor, grocer, butcher, shoemaker, etc. We do not think any court in the United States will deny these propositions.

Further, we assert that, what each individual member of a trade union may legally do, the union as a body may legally do.

Organized labor has no quarrel with the law. It does not approve of violence and disorder. It relies on purely economic means; on the strength there is in solidarity, co-operation, and unity.

We do not apologize for the errors and excesses of certain raw unionists, but we insist that, like all other movements, parties, and organizations, union labor shall be judged by its best elements.

The Republican party would not like to be judged by the indicted and unindicted rascals of the Post Office Department.

The Democratic party would object to be judged by its convicted adherents in Missouri or elsewhere.

Corporate industry would protest against sweeping assaults based on the fraudulent practices of wild and vicious gamblers in inflated stocks.

Organized labor is persistently judged by the excrescences of its great movement. But its bitter enemies are wasting their energies and their money.

The unions will not be disrupted. Slander, Parryism, and wholesale denunciation are of no avail.

Government by injunction has failed miserably. Though it has been carried to alarming extremes, it has not checked the growth of unionism. The

damage-suit weapon threatens mischief; but it will not destroy unionism. It may even prove a boomerang.

Do the worst elements in capitalism want a class struggle in the United States? Is it their purpose to convince labor that they control the courts, and can manipulate the law at their will? The gentry who are instigating judicial usurpation, who set at naught all law and all precedent when their selfish interests for the moment require it are constantly prating about "law and order?"

INDUSTRIAL ACTIVITY AND REACTION.

There are indications that the era of industrial activity which we have enjoyed during the past few years has reached its floodtide, in that there is now somewhat of a reaction. Already we see some contraction of industry by which workmen have been rendered idle. It is true that the change is not pronounced, but it is sufficiently evident for notice and deserves consideration. More especially should this receive our attention since quite recently, acting upon the cue given by our most pronounced antagonists, the capitalist press has endeavored to place upon our movement the responsibility for the industrial reaction. That the charge is untrue is fully capable of proof. But attention is called to the fact that when the reaction first made itself manifest one of the great newspapers of our country questioned the representative employers, business men, and financiers of America to make answer as to what in their judgment was its cause. Without attempting to enumerate the causes assigned by them for the industrial reaction, it is worthy of note that under the first impulse of honest expression of opinion, before the minds of any of them were perverted by those who always desire to shirk upon the shoulders of others the wrongs or the errors of which they themselves are guilty, I repeat, with unprejudiced and unperverted mind, not one among the thousands who answered held organized labor in the least responsible.

Of course, to the thinking, observing men the insinuation or charge will have no effect. We understand, as every student and intelligent trade unionist understands, that under our present economic system periods of industrial activity and stagnation are equally natural. That a reaction did not set in sooner, or that it has not become acute, is due more than any other cause to the organized labor movement.

Our movement has increased wages, shortened the hours of labor, and otherwise improved the conditions of the toilers; in other words, has made the workers greater consumers of the things that have been produced; and to this factor, supplemented by some organized method among intelligent employers, is due entirely the credit rather than the censure or blame.

The era of industrial activity has been maintained and prolonged for a longer period than any similar revival in the last forty years, while its reaction has thus far been attended with less severity and is in itself less intense than similar reactions heretofore. These industrial conditions are not due to any particular phenomenon. They have their cause and effect exactly as have the tides, attraction and repulsion, and the law of gravitation.

In countries where the economic conditions of the workers remain stationary or substantially so, the greatest degree of poverty and misery always obtains, while, at the same time, industry and commerce know no progress, and are carried on under primitive conditions. Of course this is not cited as

an indication that more improved conditions than even ours can not obtain when a normal and better economic life shall have been inaugurated, but it rather demonstrates the fact that industrial and commercial reaction can not by any specious argument be traced to the movement that tends to increase the consuming power of the wage-earners.

As a matter of fact, the greater the power of consumption of the great mass of workers, the larger their wants, the higher is their standard of life, the greater the degree of industrial and commercial prosperity. Indeed, the constant growth in the wants and demands of the masses gives to industry and commerce an impetus and progress they can receive in no other way.

At this time it is difficult to foresee the extent to which the industrial reaction may reach, although it is quite evident that, for the reasons already stated, it is not likely to become so prolonged or so intense as previous industrial stagnations or crises. Yet it is well for us to view the situation as it is, and as it may become, and to consider calmly the course which we should pursue to meet it. To do this intelligently it will be helpful to consider the policy pursued by employers during similar periods in the past, a policy which here and there is now advocated; a policy which has proven not only injurious but perverse of the very purpose for which it was inaugurated. I refer to the policy of reducing wages as a means to tide over, or to emerge from, industrial depression. In the past this has been restored to, and, owing to the comparative lack of organization among the working people and also their comparative inability to resist, they were compelled to accept it, with the result that their consuming power was lessened, throwing still more workmen out of employment, rendering the situation still more acute, and thus still further prolonging the period of the crisis.

It is the height of economic unwisdom to curtail the consuming power of the masses as a means to industrial revival of prosperity.

No industry, no country, has ever become great, or ever can become great, founded upon the poverty of its workers.

While I do not know to what extent our declarations and suggestions may influence employers generally in the effort to dissuade them from pursuing the unwise and uneconomic fallacy of wage reductions, yet a clear sense of duty must prompt us to make our position upon this question clear and comprehensive. If we shall fail to convince them as to the course which they should, or rather the course which they should not, pursue in regard to the effort to reduce wages, we will at least have the consciousness of having done our duty in the premises, and so to shape our own course as will meet the situation emphatically and unmistakably.

The working people should resist any attempt to reduce their wages or to increase their hours of labor.

We are better organized and better prepared to resist encroachments upon our condition than ever before; and, if perchance some of our efforts may be lost, it is better to resist and lose than not to resist at all; for to complacently accept a reduction in wages is simply to invite its repetition while it enfeebles our ability to resist further efforts in the same direction.

In former periods of industrial stagnation employers often accompanied their wage reductions with discharges of some workmen, and then, as an inducement to those retained, suggested that they increase their hours of labor to, as they put it, "make up the loss." In other words, those discharged,

being a menace both to the conditions of employment, as well as to the employment itself, were utilized as a means to further reduce wages and impose more onerous conditions, while the increased hours of labor of those employed further accentuated and made acute the industrial situation.

Surely, it is not rational to suggest, for the relief of an over-stocked or glutted market, that the workers shall curtail their power of consumption and then work longer hours to increase production. I submit that the policy of the labor movement is wiser and has in it the means to the sooner restore industrial activity and bring about its revival.

We urge as a way out that wages be maintained, even if necessary, to resist reductions; that as a substitute for discharges of workmen, the work to be performed be divided, thus not only helping to bear each others' burdens, but more quickly to restore activity in industry, trade, and commerce.

STRIKES AND FUNDS AS A PREVENTATIVE.

During the past year a considerable number of strikes occurred. From reports made and compiled, it will be observed that the gains achieved in the interests of our fellow workers were considerable—advances in wages, reductions in hours of labor, and improvements in other respects—and that but comparatively few of the strikes inaugurated were defeated in the objects sought. Much of the expenditures reported because of strikes was made during last year. It will be observed, too, that many organizations have gained large advantages while they have expended infinitesimally small amounts.

More strikes are avoided and averted by thorough organization and preparation for them than by any other known means.

There is a most erroneous impression prevalent regarding losses occasioned by strikes. Of course, it is true that a strike involves the loss of work and wages for the time being, but there has not one strike occurred but it has been followed by greater activity in the trade. In other words, the time for the performance of the work and the payment of the wages has been deferred; that is, that the stoppage in the trade has been made to suit the convenience and the purpose of the workmen, rather than the convenience and purpose of the employer.

A strike involving wages, hours, and other conditions of employment, even if temporarily defeated in the attainment of the immediate purpose, has always checked greater invasion on the part of the employers, or has paved the way for the ultimate achievement of the object sought by the workmen.

Taking the strike as an economic or social factor, it has never lost. For men contending against deterioration or for improvement, if, say, they lose the strike, what occurs?

Those occupying a higher material condition do not misplace those engaged in the contest. If they are displaced at all it is by those whose conditions are poorer or are unemployed, and, taking the worst view of the situation, it has been merely a change of personnel of those occupying the relative positions.

But the truth is, and the entire history of industry has demonstrated it to be a fact, that the workers who have intelligence and manhood enough in their makeup to contend against the imposition of poorer, or to strike for better conditions, never go down in the economic scale.

In other words, though the workmen may be defeated in the immediate

contest, their character, perseverance, and ability always make for the next highest rung in the industrial ladder.

And yet, conscious of these facts, I realize that some strikes may be mistakes and hurtful, since the maintenance of industrial tranquillity, when reinforced by thorough and intelligent organization of the workers, may accomplish much greater success on the road to the wage-earners' material improvement.

It is for these reasons, as well as to maintain industrial peace, agreement with our employers for the establishment of more rightful relations between us, that we advocate and stand for conciliation and arbitration before a resort to the strike.

What is a strike? A strike is nothing more or less than a disagreement between the employer and his workmen about continuing industry upon an old agreement. It is a demand on the part of workmen for a new deal, a demand on the part of the workmen for a new agreement under better conditions. After all, in spite of everything that has been said and done against strikes and strikers—and I say this fully conscious of the responsibility my words carry—the organizations of labor make for industrial peace and industrial tranquillity. I have yet to make the acquaintance of any man who has given any number of years to the work of organized labor who has not done his best to avoid and avert strikes.

There is no factor so potent in the prevention of strikes as a well-organized union of labor. Strikes are diminishing in number in spite of all our opponents say. I will say further that with the greater growth of organization among the working people there will be fewer strikes. They will be less in number and will be waged with less bitterness and intensity year after year as labor organizations grow. But when a strike has occurred and the workmen have tried all known methods of conciliation and have failed to reach an agreement with their employers, they are ready to arbitrate.

We stand for arbitration, and we pin our faith to it, but we realize that as nations must be strong in order to have fair arbitration and to secure fair treatment from other nations, so must the working people be organized and prepared to defend their interests if they want conciliation and arbitration from the other side.

THE UNION SHOP OR "OPEN SHOP."

Recently the opponents of organized labor have started an agitation for what they euphoniously designate as the "open shop;" and several employers, otherwise fair, having been persuaded that the proposition on the surface appears to be ethical, have advocated it. On the other hand, our movement stands for the union shop, not, as our opponents designate it, the closed shop; for, as a matter of fact, a union shop is not a closed shop. Any wage-earner, a member of an organization in any part of the country, can enter the union shop. And any wage-earner, competent to fill any position in the union shop, is not only eligible to enter to work therein, but the organizations have their hundreds of missionaries at work, in and out of season, urging and pleading with them to enter the wide-open doors of the union. This so-called open shop is the disintegrating factor that leads to the non-union shop; in other words, the shop which is closed to the union man, no matter from whence he hails or what his skill and competency.

The so-called open shop influences wages and the standard of life to the downward course, for it is based upon the sycophancy of the most docile, and the most immediate needs of those in direst distress, of the most poorly situated among the workmen.

Agreements or joint bargains of organized labor with employers depend for their success upon the good will of the union and the employers toward each other. Neither should be subject to the irresponsibility or lack of intelligence of the non-unionist, or his failure to act in concert with, and bear the equal responsibility of, the unionist. Hence, the so-called open shop makes agreements and joint bargain with employers impracticable, if not impossible. The union can not be responsible for non-unionists whose conduct often renders the terms of the agreement ineffective and nugatory.

Inasmuch as the most conspicuous antagonists of organized labor are sponsors for what they term the open shop, upon the pretense of the liberty of the individual, the thought forces itself upon us to ask:

"When, in history, have the opponents of any movement for the uplifting of the masses constituted themselves the advocates and defenders of the liberty and freedom of the people?"

The whole hue and cry is designed to deceive the ignorant and enthrall the masses.

I took occasion to say recently: "To a non-unionist, despite that which his advocates say for him, can not be attributed the virtue of helping his fellow workmen or contributing toward the establishment of more rightful relations between workingmen and their employers. No force but that of persuasion, moral and intellectual influence, should be exercised to convert the non-unionist to membership in our organizations, but it is hurtful from every viewpoint, and to every enlightened interest, to advocate the open shop. As the immortal Lincoln said: "This country can not long remain half free and half slave." So say we, that any establishment can not long remain, or be successfully operated, part union and part non-union.

With the facts before us, with our mission to fulfill, uninfluenced by attempts to place us in false positions, unswerving in our course for the attainment of the right, we will not be deterred, but will take on new zeal to organize the yet unorganized, unite and federate those already organized, and with clear vision and stout hearts move onward and forward for labor's amelioration and final emancipation.

The people who censure our movement and who are antagonistic fail to understand the changed conditions which have come about in industry.

They say that every man should stand upon his own merits and be the equal of every other man. No man who loves his fellows could wish more than do the advocates of organized labor that such a condition of affairs could exist. But we must bear in mind that hand labor is now a thing of the past. We must bear in mind that in what was termed "the good old days" men owned the tools with which they worked. If there was any difference between them and their employers the men could take their tools and seek other employers.

Or, if in the last analysis, no other employer could be found, the workmen could go to the land and maintain themselves and those dependent upon them.

Now our land is gone; is owned by the great corporations and the wealth

possessors of our country; the man of labor no longer owns the tools with which he works.

To-day we have great machines, new tools dividing and subdividing the labor performed; specialization of industry, the worker doing a thousand—ay, ten thousand—times over and over a little given thing in the great beehive of industry, and all these machines propelled by steam and electricity.

Now, I ask every thoughtful man and woman, How can an individual workman act upon his own initiative and from his own volition?

Where can he act as an individual to secure improvement in his condition, much less protection, against a great corporation? Some say the workingmen lose their individuality when they join a union of labor. In truth, as I have tried to show, the workingman has lost his individuality just as soon as he enters one of our great modern industrial plants. He becomes but an atom in the great aggregate of this industrial system. And further, we find now, by reason of this great concentration of industry and invention of machinery, that the individual man as an employer is gone. The individual with another individual in a partnership counts as nothing; the partnership in a company is only a small concern; but instead we find companies with companies in great combinations and trusts under whose direction the industries of our country are conducted.

The old idea, even among the business men, that competition is the life of industry, is no longer held as an economic tenet by men who know the trend of events in the development of industry. They realize that competition, which in the old time meant the life of trade, is to-day the death of the trader.

ORGANIZATION THE ONLY HOPE OF THE LABORING MAN.

The workingman of to-day has lost his individuality. The only hope that he has of regaining his social and economic individuality is by uniting in the movement of organized labor so he may be in a better position to make a joint bargain with his employer for the labor he has to sell. When workingmen of this day unite with their fellow workingmen they gain independence and become real factors in economic, social, and political life.

We have progressed from religious absolutism to the rights of religion. We have progressed from absolutism in government to the right to have views about the government under which we live, and the working people of our country and our time have progressed until they now demand to have a voice in its industrial affairs.

Our employers have so long looked upon the working people as their dependents that they even to-day speak of themselves as masters and their workmen as servants, and in the legal phraseology employed in cases the "Masters and Servants" acts are always quoted. Even though labor has become free in so far as a man's right to quit work is concerned.

The employers have always placed their price upon the commodity they want to buy. They always have spoken, and many of them still speak, of labor as a commodity, just as though the laborer could divide and distinguish himself from the labor he performs. But the employers count it the same as a bushel of coal, a bushel of wheat, or a pound of pork. It is simply a commodity, and heart and soul and conscience of the worker do not count in the cold calculations of our modern capitalists.

They want the world to regard labor as a commodity, and yet want to follow a practice absolutely different from that in vogue in buying and selling any other commodity. You may go anywhere you please, and when you attempt to buy anything a man has for sale he sets the price. If you don't want to pay that price you can go without it. In the selling of labor or labor power the employer, who is the buyer, wants to set the price of the article and deny the right to labor of a voice in determining what that price shall be.

The labor movement starts out by saying that as individuals we can make no bargain for our labor that is at all fair between man and man; hence we unite with our fellow-workers of the same craft or calling, and try to make the best possible bargain for the only thing we have to sell—*our power to labor*. We are determined to have a voice in settling the wages, the hours, and the other conditions under which labor and labor power shall be bought and sold.

Our opponents say that organized labor seeks to raise wages, but only for its own members. Primarily, that is true. Organizations of labor have their own members first in view when they try to improve conditions; but organized labor throws wide open its doors and asks all men and women who work for wages to come in. Organized labor says, "Welcome, brothers and sisters in toil! Come in and participate in the beneficent influence and results of organized effort!"

Apart from this, is the further fact that though it is true that organized labor is concerned primarily with its own members, yet, as a matter of fact, trade unions can not improve the condition of their own members without at the same time relatively improving the condition of the non-union workers.

It will usually be found that the non-unionist receives 25 or 50 cents a day less than the union man. Very often he works an hour longer each day than the union man. But, if the trade union secures an increase of 25 or 50 cents a day in wages of its members, the employer of non-union labor knows full well that it is to his advantage to make some concession to the non-union workman, or he will join the union and demand the scale.

Our opponents also charge that we want to reduce the hours of labor, and a gentleman whom I shall name later charges it as a heinous offense that the American Federation of Labor has made a great effort to secure the eight-hour workday for the working people of our country. Well, we will plead guilty to the charge of trying to reduce the hours of labor. We know some progress has been made, and that more progress ought to have been made since the time—

"When Adam delved and Eve span,
Who was then the gentleman?"

In the old time men worked from sun up to sun down, but now with the great, wonderful agencies for producing the wealth of the world so fast that it puts into the shade the wildest dreams of enchantment and wonderland, and when this great wealth of our country is being produced through the ingenuity, the energy, and the intelligence of the great body of working people, is it not time that some greater change took place than working from sun up to sun down?

We believe that the plan which was successfully tried centuries ago in the building of the Great Temple can now with safety be applied in modern industry with our great machines. We believe it is right to establish the uni-

versal eight-hour working day. Surely if it is the idea of our modern captains of industry to get all the work they can out of a man in the shortest time possible, then they should work him twenty-four hours a day for two or three days, even though they kill him.

If, however, the idea is to get the man to work for ten years, let him work twelve hours a day. If they want him to work for fifteen years, let him work ten hours a day; but if they want to get the best possible results out of a workman during his whole life; if they want him to be a benefit to society, a benefit to himself, a benefit to his family, a benefit to his fellow men and a benefit to future generations, then they should establish the universal eight-hour workday.

Our employers are setting the example of organization. The wealth possessors of our country show what is meant by the power of organization. They have organized. The professions have organized. The working people have learned the lesson and are learning it more aptly every day. They are organizing day by day, and the time is not far distant when the toilers of America will present a solid phalanx—not for injustice, not for wrong, but as a constant protest against wrong, tyranny, and injustice on the part of their employers.

The labor movement aims not to tear down anything or any one, no matter how high the pinnacle upon which he or it stands; but it does propose to go down deep, deep into the abyss of industrial misery and despair, and give hope and encouragement and help to the workers who have sunk so low. They are trying to lift them up to realize first their duty to themselves and their fellow men—their duty of standing shoulder to shoulder with their fellow workingmen and fellow citizens in constantly striving for the right.

In speaking of the collective as against the individual bargain, remember that the individual bargain is made by a workingman, where? Where the employer has him at a disadvantage. If an employer wants fifty or a hundred men he uses the usual means to make workingmen acquainted with that fact, and they come and ask for the job. Where do they ask? At the entrance to the factory or the mine. They deal with the superintendent or foreman or some other representative. What occurs? The man whose needs are the greatest, the man in the direst distress, is the man who must of necessity make the most strenuous efforts to get employment, and in that great effort he will make a bargain with the employer or his representative which is not what the other man may think is fair and just, but it is what dire poverty may compel him to take. The immediate need for money, for the things to sustain himself and his family, is the basis upon which the wages are set, and it sets the price, too, for every other man who wants employment in that line of work.

On the other hand, the union makes the collective bargain with the employer—not at the factory door, not at the mouth of the mine, but in the office of the employer, with a committee of the organization which represents, not the greatest hopes or the greatest wants of the man who wants the most, nor the needs of the man who is the poorest. A fair wage is demanded, and after an intelligent discussion of the proposition the collective bargain is made.

This method of doing business is not only fairer and better and more humane, but, economically, it is sane and sound. It protects the fair-minded

employer from the man who would crush labor to the earth in order to squeeze out a few cents profit a day; it protects the fair-minded employer from his cut-throat, Gradgrind competitor, and often makes the unfair employer be good in spite of himself.

MR. PARRY'S ATTITUDE TOWARD ORGANIZED LABOR.

Now, I want to take cognizance of some things which have transpired recently. A gentleman has undertaken to be the saviour of society. He believes that were it not for him the institutions which Jefferson, Paine, and Washington founded, the wonderful structures preserved by Lincoln and Sumner and Garrison and Phillips, are all bound to crumble into dust if he does not stand out as the saviour of modern civilization and the Gibraltar of the right of the employers, and incidentally, of labor.

Our friend to whom I refer, Mr. D. M. Parry, has recently undertaken to make very severe strictures upon organized labor, and also upon those men who have been from time to time selected as its representatives. I shall be more inclined to take notice of some of the attacks which Mr. Parry has made rather than to answer his questions, because a fool can ask more questions in an hour than all the wise men can answer in a year. It is equally true that it is not very difficult to make accusations, and one can make more accusations against another in five minutes than that other can answer in a year.

But I do want to take cognizance of some of the things which Mr. Parry has said, of some of the charges he has made, and of some of the questions he has asked. I shall not deal with his smaller questions, but with those of greater import. For instance, Mr. Parry says that if the organizations of labor taught their members some things that were of use to them it might count to the credit of the unions, but he says they do not.

I have in my possession a list of the official journals of our international unions in America, a list containing the names of seventy-four official trade journals, and wherever there is any technical work to be done those trade journals not only give drawings and sketchings, but lessons that teach the men the work they were not taught and are not now being taught in the industry on account of the improved tools and new machines. These official journals offer prizes and other inducements to incite the interest of the members in doing good work and knowing how good work should be done. But our friend Parry says that this is not so.

Organized labor—what has it accomplished? I can not enumerate all that organized labor has done; but let me ask what other organization has saved the children from the factories and workshops? The children, from the ages of five, six, and seven, were in the mills and shops and factories, and it was organized labor that sounded the tocsin and roused the conscience of the people of our country to the iniquity of child labor. Organized labor exercised a beneficent influence, and State legislatures one after another passed laws that took the children from the factories and workshops, from the mills and the mines, and placed them where they should be, in the home, in the schoolroom, in the playground. It gave them an opportunity to imbibe the sunshine, and an opportunity to grow to a creditable manhood and womanhood.

If organized labor could be driven out of existence this very day, and had

nothing more to its credit, it would have fulfilled a mission which can be credited to no other human agency, and it would have a splendid record. But it has other things recorded in its favor. It made free schools; it made free school books; it made opportunities for and disenthralled men of learning and men of the church, so that they too have come out in the open and preached the gospel of industrial freedom. The unions have secured the better protection and ventilation of the mines. It is true that here and there we hear of disasters in the mines, but few know the destruction of human lives that took place time after time when thousands of human beings were sacrificed before organized labor improved the condition of the mines. Who secured the lien laws for workmen so that their wages might be secure? Who secured early closing so that not only the workers, but also the merchant and the business man and the employer might enjoy hours of recreation, which before the era of organized labor were given over to needless drudgery. Intelligent employers agree in paying a tribute of respect to the success of organized labor in reducing the hours of daily toil.

Our Labor Day! Who gave us Labor Day? The wage workers, the organized labor movement, gave this holiday to the world. But if our friend Mr. Parry had his way, not only would these, but countless other measures, be wiped out of existence. Presidents and governors, judges and ministers of the gospel, scientists and laymen, and the large mass of business men all agree that organized labor has fulfilled a great mission and has yet a great mission to fulfill. But there is one whose figure rises on the horizon and says: "No, back! Back, ye hordes of labor! Back, ye scientists, ye economists, ye judges! Back, ye governors and presidents! You do not understand what this labor movement is; you are all mistaken. It is I and I alone who understand it."

The trade unions have secured within the past few years a something that our friend Parry does not understand, and that some others do not understand. When Hawaii became annexed to the United States slavery existed there. It was at the instance of the American Federation of Labor that Congress added an amendment to the law annexing Hawaii, abolishing slavery in the island, and providing for the appointment of a number of officers whose duty it was to go to every slave in Hawaii and tell him personally that he was a free man. When Porto Rico became annexed to the United States it was the American Federation of Labor that wiped from the statute books of that island the law which made it punishable by imprisonment and fine for men to "conspire to raise the price of labor." The law has been changed, and the change has been due to the efforts of the American Federation of Labor.

Trade unions foster education and uproot ignorance; they shorten the hours of labor and lengthen life; they raise wages and lower usury; they increase independence and decrease dependence; they develop manhood and balk tyranny; establish fraternity and discourage selfishness; reduce prejudice and induce liberty; they enlarge society and eliminate classes; create rights and abolish wrongs; lighten toil and cheer the home; brighten the fire-side and make the world better.

A strike may bring about strife and discord, but as soon as it is done better feelings are engendered and mutual respect is brought about. I don't think I would care to have a strike in Mr. Parry's factory, but I believe it would not be an unmixed evil, for after awhile he might learn the lesson that

Mr. Baer has learned, that there is something to arbitrate, that there is something to discuss, and something to concede. I should not wonder if Mr. Parry would be able to cite his employees against my position.

More than likely he could get his employees to sign a petition saying I was all wrong in so far as his treatment of his employees is concerned, but from what I can learn—and next to Mr. Parry I have the best means of knowing—the wages paid by Mr. Parry are less than any fair establishment in the same line of business in the whole country. I say again that he may bring his own employees to sign a statement saying that the statement I have just made is not true, but if he did that it would not be the first time I have been confronted with a petition wrung from working people by their employers through the fear of being discharged. Such a statement would not be convincing, for no one who knows will dispute the fact that unorganized workmen have no opportunity of expressing their independent opinion of actual conditions which obtain in their employment.

Speaking of strikes, let me refer to the miners' strike of last year, the greatest example of strikes in recent times. The conditions which obtained in that mining region were deplorable, but, through the strike, those conditions have changed. There is greater manhood; there is greater independence; there is greater mutual respect and consideration among all classes in the anthracite coal fields, and we will not in the future have the cries of poverty and the wails of distress that have reached the working people from the miners there for twenty years past.

That much, at least, is gone from the conditions there, and they will be no more subject to poverty and misery than other working people. Certainly they have learned a lesson that by their organization they have been enabled to emerge from an awful condition of misery to take their position with all their fellow workmen.

Now, I want to say a word about the charge that union men shirk work. That charge is not true. They say we want to establish a uniform rate of wages. That is not true. It is a mischievous invention to injure the cause of labor. What organized labor aims to do is to establish a minimum wage, a living wage; to establish a life-line beyond which the employers shall not drive the working people.

We say that if a man or woman is worth while employing at any occupation he or she ought to receive a living wage, and for less than that they ought not to be called upon to work. It is the ignorant or malicious antagonists of organized labor alone who try to hamper our movement by using this argument. We never try to hinder the employers from paying any working man or working woman higher wages than the minimum; but we do object to their paying less than the minimum wage.

Have we had one word of condemnation from either Mr. Parry, or anyone else who believes with him, against one of the greatest crimes that has ever been committed against the human family? Through the stock speculators in cotton—in other words, through the gambling in cotton—forcing the price so high that employers in the textile industries have found it unprofitable to continue operations, more than 300,000 men and women in that occupation have been idle more than four months. Where has there been one word of criticism or denunciation on the part of Mr. Parry? He will pick out here and there some fellow who has indulged in a drunken squabble, or one who has

been engaged in an assault, deplorable as these are, and hold these things up as typical of the labor movement, when such things are discouraged in every way by organized labor.

The boycott is not a new weapon; it was established by our forefathers. They made a great teapot of Boston Harbor when they threw the tea overboard and wouldn't deal with the English tradesmen. Just recently our Federal courts have decided that an employer can discharge workmen when he pleases and for what he pleases, and that employers can have a blacklist. Does not that carry with it that the workingmen have a right, in defense of their own interests, to quit work when they please?

Mr. Parry can not crush organized labor. There is no force or power on earth to crush organized labor. It lives in the hearts of our people. It can not be crushed out. Out of our labor movement we want to establish this country, not only as the greatest granary of the world, but the greatest workshop of the world; but this can only come from a greater improvement in the conditions of our working people. No country ever became or can ever become great, based on the docility and consequent poverty of her workers.

And out of our movement will grow a better manhood, a more intelligent and beautiful womanhood, and a brighter childhood. The time of which the philosophers have dreamed and the poets have sung, and for which men have contended for centuries will have come. When that day comes none will have done so much for the peace and good will that will reign upon earth as the trade unions.

A GOLD STANDARD FOR MEXICO.—From the standpoint of capital, taking the situation as a whole, the great drawback lies in the fact that the depreciation of silver with respect to gold has been very much more rapid than the depreciation of the peso as currency. If the price-level and the wage-level inside Mexico had kept even pace with the fall of silver, it would still be possible to send gold there for general investment and expect a profitable return. It is precisely because the depreciation has been with respect to international exchange rather than with respect to the use of silver as money within the country, that the financial isolation of Mexico, with its train of one sided and undergrown development, has come into being. The uncertainty of the exchange rates of the future is the one great barrier that shuts out the needed stream of capital from abroad. It makes investments, even in the lines where the income is in gold, nothing more or less than gambling propositions. It means a great deal to a nation not to have its railroads, its industries, its banks, its trade and its agriculture dependent for their success or failure on the skill of the proprietors in betting on silver futures, and there can be no doubt that stabilization of the exchange will inaugurate an era of swift and strong expansion, both on the part of existing enterprises, which at present stand on the footing furnished by the quagmire of silver speculation, and on the part of new enterprises, backed by the inflow of capital from abroad. The land is rich, it is young and undeveloped, its government is strong and liberal, there is a more progressive spirit abroad among the younger generation, so that development will be aided rather than hindered by the owners of the land. Nothing is lacking but reliable money before a magnificent structure of internal expansion will begin to rear itself on the solid foundation that the past quarter century has laid. * * *

The Government Commission, under the guidance of the able Minister of Finance, Limantour, has made a long and exhaustive study of the situation, and of the means by which to come to a satisfactory solution of a problem which is doubly difficult because Mexico is par excellence the silver country of the whole world by right of her pre-eminence in silver production. The sentiment which naturally clings to the use of the white metal is yielding to reason and to the logic of disagreeable facts, and there can no longer be any doubt that the gold standard, in one form or another, is soon to be adopted with the approval of the entire country.—Morrill W. Gaines, "Effects of the Silver Standard in Mexico," in "Yale Review" for November.

GOLD.

Gold is always a picturesque subject. Whenever its name is pronounced the effect is talismanic. Promoters, whether of legitimate or lottery enterprises, well understand this. Gold bonds, prizes payable in gold coin, somehow seem to be more attractive than if only money or dollars were specified, even when all dollars and all money are practically gold. Gold is the real thing. There are many men of many minds, as the old proverb has it, but curiously enough these many minds are all agreed about gold. The desire for gold is as enduring as hunger and as insatiable as thirst. Even the eyes of the hardened and *blase* handlers of money who assemble in bankers' conventions brighten at the word and their nerves, overstimulated as they are by the rustle of the greenback and silver certificate and all those forms of money irreverently styled the "long green," still remember and reproduce in imagination the peculiar low and dull musical clink of heavy coins, when the word gold is mentioned.

So Mr. Roberts, the Treasurer of the United States, did not lack a responsive audience when he told the delegates to the convention of the American Bankers' Association at San Francisco the story of the inflow of gold during the last few years. California, too, was a very appropriate field for such a subject, being the only State in the Union that successfully resisted the subtle influence of the greenback, and that now has the triumph of witnessing the return of the majority to her way of thinking.

Mr. Roberts is a picturesque figure, and he treated his picturesque subject picturesquely. The stock of gold in the United States was brought objectively into the presence of his audience in all the majesty of a gleaming cube, fifteen and more feet on its edges, and weighing 2,354 tons. He was more concerned with its solidity than its surface, and neglected to picture what a gleaming, golden expanse would have presented itself to the eyes of the audience if the broad side of this cube, a glittering yellow mirror containing 250 square feet, had been turned to them. Coined into eagles and placed edge to edge, it would reach 2,116 miles, said Mr. Roberts. He did not prolong the agony by showing that it would reach to the fixed stars if stretched into wire sufficiently fine and long, or that it would suffice to regild the sun if beaten out into gold leaf sufficiently thin. Luckily, imagination has been given to man, for all these things have to be imagined.

Gold is in fact a very modest and retiring metal (the enthusiasts who used to rave about the crime of 1873, even called it cowardly), and it never collects itself into cubes of fifteen feet, nor are gold eagles ever used to measure distances. The great Coin, in his financial school, used to collect the world's stock of gold into a cube of thirty feet, and in the presence of his class, composed of eminent financiers, astonished and awed by the wisdom of the boy, point the finger of scorn at it, and demand what right a little petty insignificant thing like that had to be the basis of all the credits, the industries and the hopes and fears of mankind.

Economists have again and again been pushed into a corner to explain in what really consisted the universal acceptance of gold as a measure of value, as the touchstone of the value of all else in the world. They have cited its beauty, its indestructibility, its capacity for division, its weight in small compass; but these reasons, either singly or in combination, have not seemed conclusive to the critical. The mass of mankind, who take things as they find them, were satisfied to know that gold was valuable just because it was; just as water quenched thirst because thirst disappeared when one drank it. No one paid much attention to the Kentucky colonel who asserted that water did not quench *his* thirst.

Since the great silver controversy has ended, and it is no longer necessary to explain to silver cranks why gold was accepted and silver was not as a monetary basis, the discovery of radium and its wonderful properties have thrown a side light on the properties of all metals. Gold, therefore, like other metals, has life of its own, and perhaps a soul; at least if radium throws out rays or emanations which affect man's physical structure, it is strictly in line with this to suppose that gold throws out emanations which affect man's moral nature. This view is supported by the celebrated Keeley gold cure, which so changed the moral nature of the inebriate that after undergoing treatment he could not if he would again become a drunkard. That there were sometimes relapses after taking the gold cure does not militate against the general proposition, that gold or emanations from it affect the moral nature of man, because these relapses at most prove that the patient stopped short of taking the necessary dose.

If, then, all the gold in the world according to the idea of Coin, copied by Mr. Roberts, could be collected in one mass, who can tell what might be the effects upon that portion of the human race brought within the effective range of its emanations? The power of the minutest particle of radium upon the physical nature of man has been found to be very great. Gold would still preserve its proud eminence as the king of metals, if as suggested it shall be proved that its emanations have power over the moral nature of man.

It is unnecessary to indulge in speculation as to whether the cube would be the best shape in which the mass could be moulded to exert its greatest or most beneficent effect. In the shape of coin, gold has already wonderful effect in sustaining those moral qualities which insure financial confidence. If all this gold were consolidated into one gigantic coin, the surface for the emission of ethical emanations would be much greater. The circumferences, diameter and thickness of such a coin must be duly calculated by our scientists. Other figures might be tried. The sphere might have advantages. The experience of Cagliostro points very strongly to the pentagon as possibly having great theoretical claims to being the most effective. Other well-known geometrical figures occur to every one. Both Coin and Mr. Roberts appear to have been on the very verge of a great discovery, from which they seem to have been held back by the very greatness of their imaginations. Coin seemed to desire to collect all the gold of the world in one mass in the shape of a cube and place this in the Chicago wheat pit. A cube was a good shape because it would set solidly, and probably its weight would prevent it from being removed. For this reason a cube is preferable to a sphere; the latter might be rolled away like a huge marble. Mr. Roberts was more moderate than Coin, as he only suggests the collection of the gold in the United States

in the form of a fifteen-foot cube, to be exhibited in the convention of the American Bankers' Association. It is believed that a spherical figure would have been safe before this convention, but still Mr. Roberts thought best to adhere to the cube, which would certainly be more difficult of transportation.

If Coin or Mr. Roberts had considered further and had dreamed of the possible moral effects of the exhibition of gold in mass, they might have perceived that the experiment would perhaps be made with smaller quantities of gold and with just as good results. For instance, if a square or circular disc of gold containing, say, one-fifteenth of Mr. Roberts' cube, were brought into the New York Stock Exchange when panicky symptoms were manifested, and the brokers were exposed to its emanations for a suitable time, quiet and confidence might be restored. Mr. Roberts' cube might be sawed into sixty slabs, each three inches thick, the saw-dust to be saved of course. These slabs might be distributed among the principal stock exchanges. Experiment might prove that so large masses were entirely unnecessary, and that striking effects could be produced by much smaller quantities of gold. Each bank might have its own emanator to work its soothing effects on depositors, when a run was threatened; or, what would be better, one mass of gold could be held in common by all the banks and used by each in turn as occasion seemed to warrant.

When they suggest such great possibilities as these the public need no longer wonder at the utility of statistics which compare the quantity of gold coins in the country with the distance to the moon, and that speculate on the distance the paper currency of all denominations would reach if it was laid end to end and did not blow away. It might even be profitable to speculate how much gold it would take to fill up the Panama canal, for instance. But the interest which such speculation does excite in the minds of audiences and the fact that they are worth while using as rhetorical devices, only prove the strong moral hold that gold, and all money in the reflected virtue it receives from gold, has upon mankind, which as has been said before should induce our scientists to experiment with gold along the same lines that they have pursued with radium, studying the moral effects of the emanations from the yellow metal upon individuals as well as upon men in masses. Many secrets may thus be discovered and many mysteries explained.

It is the peculiar gift of some orators and writers to excite thought in their hearers and readers, not so much by what they actually say or write, as by what they suggest. Mr. Roberts' address was very suggestive. The considerations set forth above must have occurred at once to all his hearers. It is wonderful how skill in the art of suggestion will stir up and fructify the thoughts of millions who without this impulse would have remained apathetic and uninterested.

TRUST COMPANIES OF THE UNITED STATES.—The United States Mortgage and Trust Company, of New York, has just issued a book giving a list of all the trust companies in the United States, also showing in detail the assets and liabilities of each company, together with the officers and directors. This information is arranged alphabetically, in a convenient form for reference. It is the only publication, we believe, that gives full reports of all the trust companies of the country, and will be found very valuable. The book is well printed and substantially bound.

The compilation of the work was done by The Audit Company, of New York.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the *MAGAZINE's* Law Department as early as obtainable

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

COLLECTIONS—WHEN THEY CONSTITUTE A TRUST FUND.

Supreme Court of Georgia, August 12, 1903.

G. OBER & SONS COMPANY vs. COCHRAN.

The mere fact that a bank, to which a note was sent for collection with instructions to immediately remit the proceeds of the collection to the owner, collected the money due on the note, and, instead of obeying instructions, used the same in its own business, is not sufficient, upon its insolvency, to impress a fund realized by its Receiver, by converting its assets into cash, with a trust for the payment of the money so collected and used.

(Syllabus by the Court.)

G. Ober & Sons Company held a note on P. F. Matthews, of Pike county, for \$506, which fell due on November 1, 1901, and, on October 14, 1901, sent his note to the New South Savings Bank, of Barnesville, Ga., for collection and remittance of the proceeds. On November 21, 1901, the bank collected the amount due on the note from Matthews. The bank never remitted the amount so collected to the Ober Company, but used the same in its own business. On December 4, 1901, the bank failed. Upon the application of creditors, its assets were placed in the hands of a Receiver. The Ober Company filed a petition against the Receiver, in which, after setting up the facts in reference to its claim against the bank, it alleged that it was not a creditor in the sense that it had extended credit to it either by making a deposit or by a loan of money or otherwise; that the money collected from Matthews was the property of the petitioner, and not an asset of the bank. The petitioner prayed for an order requiring the Receiver to pay over to it the amount so collected. The Receiver alleged in his answer that when he took charge of the bank he found only \$29.52 in its vaults. He denied that the petitioner had any superior lien on the funds in his hands.

The case came on to be tried at the October term of Pike Superior Court. The petitioner proved the facts which it had alleged in its petition, but made no effort to trace the money collected upon the Matthews note into any fund or property which went into the hands of the Receiver. The court held that under these facts the Ober Company was not entitled to an equitable lien on the funds in the hands of the Receiver as against the general creditors of the bank, to which judgment the petitioner excepted.

FISH, P. J.: Under the facts alleged and established by the evidence, did the petitioner have an equitable lien upon the assets of the bank in the hands of the Receiver? We think not. Under the ancient rule the equitable right

to follow and recover property misapplied by one holding it in trust for another depended upon the ability of the owner to identify it, the equity attaching only to the property itself. Subsequently the rule was extended so that the equitable right would attach to the proceeds of the property, to whatever was obtained in exchange for it; the rule, as stated by Lord Ellenborough in *Taylor vs. Plumer*, 3 M. & S. 575, being that "the product or substitute for the original thing still follows the nature of the thing itself so long as it can be ascertained to be such."

But, if there were no means of tracing and identifying the specific property or its proceeds, the equitable right of the owner was lost; so that, if a trust fund became mingled and confused with other funds, it could not be separated and recovered by the person injured by the misappropriation.

Since the decision in the celebrated English case of *Knatchbull vs. Hallett*, L. R. 13 Ch. Div. 696, wherein Master of the Rolls Jessell laid down what he called "the modern doctrine of equity," the rule has been given a somewhat wider scope in England and in those jurisdictions in this country where the decision in that case has been followed. Indeed, in some of the American cases which have been decided since this leading English case, the courts have gone much farther than the principle there laid down seems to authorize. In that case it was held: "If money held by a person in a fiduciary character, though not as trustee, has been paid by him to his account at his bankers', the person for whom he held the money can follow it, and have a charge on the balance in the bankers' hands."

The facts of the case, as stated by the Master of the Rolls, show that Mrs. Cotterrill had deposited certain bonds with Mr. Hallett for safe custody, and he was in the habit of receiving the income from the bonds for her. Hallett improperly sold the bonds, and put the money received to his general account at his bankers. Sir George Jessell said: "It is not disputed that the money remained at his bankers' mixed with his own money at the time of his death; that is, he had not drawn out that money from his bankers. In that position of matters Mrs. Cotterrill claimed to be entitled to receive the proceeds, or the amount of the proceeds, of the bonds out of the money in the hands of Mr. Hallett's bankers at the time of his death, and that claim was allowed by the learned judge of the court below, and, I think, was properly so allowed."

The ruling of the court made Mrs. Hallett's claim a charge upon the fund in the banker's hands, with which her money, received from the sale of her bonds, had been mingled by her agent and bailee. The court proceeded upon the theory that a trustee who deposits trust funds, together with funds of his own, to his own account at his bankers', and then draws, for his own purposes, from this fund, leaving a balance sufficient to cover the trust fund, is to be presumed to have drawn out his own money in preference to the trust money. The Master of the Rolls likened the facts of the case to a trustee putting one thousand sovereigns of trust money in a bag, and then placing in the same receptacle a sovereign of his own; and then said: "Could anybody suppose that a judge in equity would find any difficulty in saying that the *cestui que* trust has a right to take 1,000 sovereigns out of that bag? I have no doubt of it." He further said it would make no difference if, instead of one sovereign, it was another one thousand sovereigns of his own which the trustee placed in the bag. But we apprehend that if, at the time the effort

was made to recover the trust funds, they could be traced no further than into the bag, and the bag was then empty, the trustee having spent all the sovereigns which he had put in it, the trust fund, even under the principle laid down in that case, would be lost, and the *cestui que* trust could not, as against general creditors of the trustee, take from the assets of his estate an amount sufficient to replace it.

In the case which we have under consideration, the bank was the agent of the Ober Company, and as such agent collected something over \$500, which it used in its business, and then failed, and its assets were then placed in the hands of a Receiver; and the claim of the Ober Company is that, notwithstanding its failure to trace the money so collected into any property or fund which went into the hands of the Receiver, it has the right to take from a fund which was not on hand when the bank failed, but which has been realized by the Receiver by converting the bank's assets into cash, an amount equal to that which the bank so collected and spent.

There is nothing in the noted English decision which sustains this contention, and it is contrary to the well-established principle applicable to cases of the present character, and to the great weight of authority upon the subject. In order to recover a trust fund which has been misapplied by the trustee or person holding it in a fiduciary character, it must be clearly identified or distinctly traced into the property, fund, or chose in action which is to be made subject to replace it. When the trust fund has been dissipated, and can be traced no further than into the hands of the trustee or agent who held it in trust, the fund is lost, and he who was its owner stands upon better footing than a general creditor when the assets of the trustee or agent are being distributed by a court of equity. It is a wide and dangerous stretch of the equitable doctrine applicable to the tracing and recovering of trust funds to say that it is not necessary to trace the funds into any specific property or chose in action, but that, if it can be shown that the funds somehow, in some unexplained way, went into the business of the trustee, all of his assets are forthwith impressed with the trust.

Even upon the theory adopted by some courts that the tracing of the trust fund into the estate of the trustee is sufficient, it is difficult to see how mere proof that the trustee has used the fund in his own business is sufficient to show that it has gone into, and in some form is a part of, his estate. He may have made a bad investment with it and lost it completely; he may have paid debts with it, in which event the liabilities of his estate will have been decreased; but nothing will have gone into his assets as the representative or substitute for the fund so used.

[The Court here examined a number of cases.]

It seems to us that the courts which, in our opinion, have enlarged the equitable doctrine applicable to cases of the present character to an unreasonable extent, have lost sight of this basic idea of equitable title to the property into which the trust funds are traced; that is, title to the extent that such funds have entered into such property. The other cases cited by counsel for plaintiff in error are *Thompson vs. Gloucester City Savings Inst.*, 8 Atl. 97 (a case decided by the Court of Chancery of New Jersey); *Griffin vs. Chase*, 36 Neb. 328; *Peak vs. Ellicott*, 30 Kan. 156; *People vs. Bank of Dansville*, 39 Hun, 187; *First National Bank vs. Sanford*, 62 Mo. App. 394; and *German Fire Ins. Co. vs. Kimble*, 66 Mo. App. 370. These cases tend to support the

contention of the plaintiff in error; especially the two Missouri cases, which are directly in point.

In the first of these Missouri cases the court, referring to the reasoning in *Harrison vs. Smith*, 83 Mo. 210, the decision in which was considered controlling, said: "We concede that this reasoning proceeds on advanced lines, and is seemingly opposed to the weight of authority in other States. In our investigation of the subject, we have found some other cases which are in line with these, but for the reasons which we have given we do not consider any of them sound."

In an elaborate monographic note to *Sayles vs. Cox*, 32 L. R. A. 719, it is said: "The general rule, where the bank has completed the collection and mixed the funds with its own, is that the bank is no longer a trustee, but simply a debtor, and that the owner of the paper cannot claim a preference out of its assets." In that case the Supreme Court of Tennessee held: "The fraud of a bank in receiving a note for collection when insolvent will not alter the rule that collections made under directions to remit 'by draft' will not be impressed with a trust giving a preferential claim against the bank's assets."

In *Merchants' Bank vs. Austin* (C. C.) 48 Fed. 31, it was held that a bank which collects a draft sent it for that purpose, with directions to remit the proceeds to another bank for the owner's account, does not thereby become a trustee, so that the fund can be followed into the hands of a Receiver, although it had become mixed with other cash of the bank before his appointment; "especially when it appears that the business was carried on and money paid out for several days after the collection was probably made."

In *Philadelphia National Bank vs. Dowd* (C. C.) 38 Fed. 172, it was held that, if a paper is sent to a bank for collection and immediate remittance, but the collecting agent, instead of obeying instructions, collects the money due on the paper, and mingles it with its own funds before it closes its doors, the fund so collected cannot be followed, but the collecting agent is merely a general debtor of the owner of the paper. In that case there is a fine and full discussion of the subject and the cases pro and con by Judge Seymour. To the same effect as the case just cited is *Bank of Commerce vs. Russell*, 2 Dill. 215, Fed. Cas. No. 884.

The Supreme Court of Alabama held: "The mere fact that a bank, as agent, has converted to its own use the money of its principal, which it failed to account for, and commingled it with its own money, or in some form with its other assets, so that it cannot be identified, or the specific uses to which it was applied traced, is not sufficient, on a bank becoming insolvent, to impress the general assets of said bank with a trust for the payment of the money so collected and used."

Similar rulings were made in *Anheuser-Busch Brewing Association vs. Clayton*, 56 Fed. 759, 6 C. C. A. 108; *Edson vs. Angell*, 58 Mich. 336; *Ill. Trust & Savings Bank vs. First Nat. Bank* (C. C.) 15 Fed. 858; *Spokane County vs. First National Bank*, 16 C. C. A. 81, 68 Fed. 979; *Ferchen vs. Arndt*, 26 Or. 121; *Muhlenberg vs. Northwest Loan Co.* 26 Or. 132; *Thompson's Appeal*, 22 Pa. 16; *Union Bank of Chicago vs. Goetz*, 138 Ill. 127; *Englar vs. Offutt*, 70 Md. 78; *Steamboat Co. vs. Locke*, 73 Me. 370; *Lathrop vs. Bampton*, 31 Cal. 17; *Little vs. Chadwick*, 151 Mass. 109; *Neely vs. Rood*, 54 Mich. 134; *Shields vs. Thomas* (Miss.) 14 South, 84.

The case of *Tiedman vs. Imperial Fertilizer Co.*, 109 Ga. 661, 34 S. E. 999, is on its facts closely analogous to the present case, and the decision there rendered would be conclusive of the question which we have had under consideration, but for the fact that the equitable doctrine in reference to the tracing and recovering of trust funds, or funds held in a fiduciary character, seems to have been only incidentally dealt with, the case turning mainly upon the question whether the parties claiming the equitable liens upon the assets of their insolvent bailees were entitled to such liens under certain sections of the Civil Code, upon which they relied to support their contentions. It was there held: "Where the owner of notes placed the same in the hands of another for collection, and the bailee, having made collections, failed to remit the proceeds, the claim of the owner of the money collected was, in a general sense, in the nature of a fiduciary debt, but not such a one as entitled him to a priority over the claims of general creditors in the distribution of the assets of the bailee who had become insolvent."

In the course of the opinion, however, Mr. Justice Little made some observations which are directly applicable to the question involved in this case. He said: "A trust may arise in different ways. If one uses the funds of another in the purchase of property, taking title thereto in his own name, as a general rule it will be held that the purchaser holds the property thus acquired in trust for the benefit of the owner of the funds. Such is known as a resulting trust, which is sometimes spoken of as an equitable lien; and, while it is, the lien extends no further than the property acquired with the money of the other. Such a lien can only be enforced against the specific property in which the funds were invested." He further said that the facts created an agency, and that the principals could have recovered a judgment for the money collected against the agents "in a suit as for a debt, or, had they been able to identify the particular funds, separate and apart, they could have recovered the specific funds."

The trial court correctly held that the petitioners were not entitled to an equitable lien upon the assets in the hands of the Receiver of the insolvent bank.

Judgment affirmed. All the Justices concurring, except Turner, J., not presiding.

AUTHORITY OF CASHIER—SPECULATIONS ON BEHALF OF BANK.

Supreme Court of Pennsylvania, May 18, 1903.

NATIONAL BANK OF BOYERTOWN vs. FRIDENBERG.

The Cashier of a bank was authorized to buy and sell stock, and his authority was apparently general as to the character of the securities he was to purchase, and as to whether they were to be on margins or cash. He opened an account in the name of the bank with certain brokers, and bought and sold stock both for cash and on margins, and large profits were made for the bank on the cash transactions. He subsequently absconded.

Held, that the bank could not claim that it was not liable for the losses on the margin transactions.

Bregy, J., found the facts to be as follows:

On July 19, 1900, the Cashier of the plaintiff bank opened an account with the defendant brokers in the name of the National Bank of Boyertown.

The first transaction was the purchase of one hundred shares of Union Pacific at fifty-seven and five-eighths, which was paid for in full in a few days. The second was a purchase of two hundred shares of American Tobacco at ninety-three and three-quarters, also paid for in full in a few days. (This transaction was on July 31, 1900.) These stocks were sold in a few weeks at a profit, and from that time on stocks and bonds were bought and sold when it was thought wise to do so.

For quite a while these speculations were made with the express authority of the President and directors of the bank. In fact, it is admitted that all the purchases of stocks and bonds that were paid for in full a few days after they were bought are properly chargeable to the bank. In many cases the securities bought would not be taken away from the brokers' possession by the bank, but would be held by the defendants till the bank wanted them or ordered them sold.

In October, 1901, the Cashier absconded, and it was then discovered that he had not only speculated as he was specially authorized to do, namely, by paying in full for his purchases, but that he had bought stocks and bonds without paying for them, upon the strength of the securities in the hands of the brokers defendant. This sort of speculation was without the knowledge of the President of the bank or the directors. The President of the bank received some \$165,000 worth of securities from the defendants after the Cashier's flight; ordered the remaining stocks, etc., bought by the Cashier's order to be sold. The balance resulting from this sale, less the amount due upon the various transactions, the bank declines to receive, claiming more.

The question turns upon whether the bank is bound by the acts of the Cashier. The bank claims that it is only bound by the purchases that the Cashier made when he paid for them in full (what is known as an "outright purchase"), and that the purchases otherwise made do not bind it. I cannot agree to that contention. The bank authorized its Cashier to speculate. It sent no notice to the defendants of any limitation of the manner of it. The bank received large sums as the result of many fortunate ventures, and finally ordered the balance of stocks, etc., on hand, sold out, and the account closed.

I think this course of conduct bound the bank for all the transactions of its Cashier, it being remembered that every purchase and sale was made for the account of the National Bank of Boyertown on the books of the defendants. I also think the Cashier has power to bind the bank for purchases and sales of its securities, and that the order to sell out the remaining stocks and bonds was an express affirmation of all that he had done.

For these reasons, I grant the motion to dismiss the bill.

MESTREZAT, J.: The plaintiff's bill was properly dismissed on the facts found and stated in the two opinions filed by the learned trial judge. The bill avers, and it is conceded, that the defendants, who were brokers doing business in the city of Philadelphia, were employed by Mory to buy and sell securities for the plaintiff bank. The account was opened in July, 1900, in the name of the National Bank of Boyertown, and ran till October, 1901. The defendants had a previous individual account with Mory, but it was closed more than a year prior to the opening of the account with the bank.

It is not denied that Mory had authority to purchase and sell stocks and bonds for the bank. It is found as a fact that the bank authorized the Cashier to speculate in stocks, without any limitation as to the manner of

doing so, and that it received large sums as the result of fortunate speculations during the running of this account. After Mory, the Cashier, had absconded, in October, 1901, the President of the bank received from the defendants securities aggregating \$165,000, and ordered the brokers to sell all the remaining stocks and bonds held by them for the plaintiff, which was done, and the balance due the bank on the account was remitted to it. An itemized account of all the stock transactions between the plaintiff and the defendants was furnished by the latter to the bank prior to the filing of this bill. The defendants had no private account with Mory, but all their dealings with him subsequent to July 19, 1900, were for and in the name of the bank. There was but one account of these transactions kept by the defendants, and it contained all the securities purchased and sold through Mory from July 19, 1900, when the account was opened, until it was closed, in October, 1901.

This bill was filed for an accounting and to compel the defendants to deliver to the plaintiff bank any securities that might be found owing it. It is claimed by the plaintiff that the account should include only such securities as were purchased and sold for cash, and should exclude all stocks and bonds not paid for in full at the time of the purchase. The former transactions are alleged to be legitimate; and the latter, speculative and on Mory's individual account. The plaintiff has accordingly made two accounts from the account furnished it by defendants—the only account kept by them—and annexed the two accounts to its bill; one containing the transactions admitted to be legitimate, and carried on by Mory for the bank, and the other alleged to be speculative, and containing transactions carried on for the private account of Mory. It is averred that these accounts were "wrongfully merged into one account" by the defendants. But there is no sufficient evidence to sustain this averment, or to warrant the conclusion that the defendants knew the purchase and sales of any of the securities were on Mory's individual account. The defendants had no reason to believe that the bank had confined Mory to cash transactions in his stock dealings on its account. The authority of the Cashier in the matter was apparently general, and without limitation as to the character and amount of the securities he was empowered to purchase, and as to whether the transactions should be on margin or for cash. Even if the financial standing of Mory had been discredited in the conversation between Wallick and the defendants, proof of which was rejected, it afforded no reason for the latter believing Mory was not authorized to act for the bank in all of the stock transactions subsequent to the date the account had been opened, when it is conceded he had the authority to purchase and sell stocks for cash through the defendants as brokers. His standing for honesty and integrity was vouched for by the bank, by its employing him as its Cashier. His financial condition might be a reason for the defendants refusing to deal with him on his individual account, but it was no evidence of a limitation of his authority to act for a bank of which he was Cashier, and which admitted his authority to deal for it in securities.

We think the plaintiff must accept the account as a whole, and that there is no reason shown by the evidence for excluding the transactions involving the losses. As said by the learned judge: "There is no equity in the division of what was one account, as far as the defendants were concerned, into two, and thus pocket the profits of one kind of transactions, and cast upon the

defendants, not the loss of others, but the failure to make more profits than it would have made if certain other transactions had not taken place."

The decree is affirmed.

JOINT ACCOUNT—DEPOSIT IN JOINT NAMES—HOW CHECKS MUST BE SIGNED.

Court of Appeals of Kentucky, October 7, 1903.

COLUMBIA FINANCE AND TRUST CO. vs. FIRST NATIONAL BANK.

Where several persons make a deposit in a bank to their joint credit, the bank must have the signatures of all of them appended to a check before it is authorized to pay it.

Where moneys belonging to a firm are deposited in a bank, a member thereof cannot employ any part of such funds to pay his debt to the bank without the consent of the remainder of the firm.

If a depositor of trust funds appropriates them to the payment of his individual debt to the bank, the latter, having notice of the character of the fund, is affected with knowledge of the misappropriation, and may be compelled to refund.

HOBSON, J. (omitting part of the opinion): The \$32,431.69 having been deposited in the bank to the credit of B. H. Young, President, W. A. Sudduth, and H. L. Stone, and to be checked out only on checks signed by the three, Sudduth had no authority, without the consent of Stone and Young, to authorize the bank to appropriate any part of the money to the payment of his individual debt to it. The purpose of depositing the money, as it was, to the credit of three, was to prevent any one of them from appropriating it without the consent of the other two. The form of deposit showed this, outside of the parol agreement. The rule is that, if several persons make a deposit to their joint credit, the bank must have the signatures of all of them appended to the check before paying it, or it takes the risk. (2 Morse on Banking, § § 425-436.)

The money having been deposited with the bank to the credit of Young, Stone, and Sudduth, and on the agreement that it was not to be paid out except on their joint checks, the bank acquired no title to the money, which it thus held in trust, by applying it to the payment of its debt against Sudduth. The law does not permit one who has acquired possession for one purpose thus to gain an advantage; and the legal status of the bank, after the memorandum check was credited to it on the account by the direction of Sudduth, was not different from what it was before. Besides, so much of the deposit as represented the fee of Stone & Sudduth was the property of the firm, and Sudduth could not use it to pay his debt to the bank without the consent of Stone. The bank was charged with notice that one of the partners had no right to apply the partnership assets to the payment of his individual debt, and when it made the appropriation by the direction of Sudduth alone it acquired no greater rights than he had. (Jackson vs. Holloway, 53 Ky. 133.)

A partner in dealing with the firm property is a trustee for the firm. The authorities are uniform that, if a depositor of trust funds appropriates them to the payment of his individual debt to the bank, the latter, having notice of the character of the fund, is affected with knowledge of the misappropriation, and will be compelled to refund. (1 Morse on Banking, 4th Ed. § 317.) On the other hand, each of the partners having consented to the assignment made by the other to the trust company, these assignments were, in effect,

the assignments of the firm, or of as much force as if they had been made in the name of the firm. True, they were partial assignments, but they were afterwards assented to by the construction company, when Young, as president, signed the checks sued on. Besides, the construction company is not complaining. No right of its is affected; and, as we have seen, equity will protect, as far as it can do so without injury to the debtor, rights acquired by partial assignments.

The rights of the trust company are not affected by reason of the fact that the bank first gave notice to the debtor of its assignments. The rule in England is that, as between successive assignees of the same chose, each being a bona fide purchaser for value, the one who first gives notice to the debtor will be entitled to preference, although his assignment is later in date. Some courts in this country have adopted the same rule, but the weight of authority in America is to the effect that among successive assignments the order of time controls. (2 Pomeroy's Equity, § 695; 4 Cyc. pp. 32, 77.)

The rule of caveat emptor applies to sales of choses in action as in other sales of personal property, and, if the seller has sold the thing to one person, and therefore has no title to pass to a second, the latter takes nothing by his purchase. The assignee's right of action is without prejudice to any discount, set-off, or defense the debtor has before notice of the assignment. (Ky. St. 1899, § 474; Civ. Code, § 19.)

The purpose of the notice is to protect the debtor in such defenses innocently acquired. It adds nothing to the assignee's title, which is perfect as between him and the assignor or those claiming under him from the time of the assignment. While the precise question appears not to have been directly passed on heretofore by this court, the principles announced lead to the conclusion indicated. (See *Millar vs. Field*, 10 Ky. 108; *Newby vs. Hill*, 59 Ky. 553; *Garrott vs. Jaffray*, 73 Ky. 415; *Beard vs. Sharp* [Ky.] 65 S. W. 810.)

Here no right of the construction company was affected by reason of the failure of appellant to give notice of its assignments to the construction company for a month after appellee's notice was given. The situation of the parties when the notice was given was just as it was a month before, and the construction company had then no defense against the assignor. The failure of appellant to give the notice sooner, having prejudiced no right, was immaterial.

It was held in *Lester vs. Given*, 71 Ky. 357, that the holder of an unaccepted check on a bank might maintain an action thereon. This case has frequently been followed since, and we regard the rule as settled. (*Merchants' National Bank vs. Robinson*, 97 Ky. 552; *Weiland's Adm'r vs. State National Bank* [Ky.] 65 S. W. 617, 66 S. W. 26, and cases cited.) The fact that the bank in this case claimed not to have the money on hand when the checks were drawn, is not sufficient to take it out of the rule, for the checks completed the transaction, and were the proper means for bringing to a decision the question in dispute.

Sudduth died insolvent. He was also considerably overdrawn with the firm of Stone & Sudduth. Whether there will be anything coming to him on the settlement of the firm, or what will be the rights of the bank in this event, cannot be determined in this suit, for neither Stone nor Sudduth's representative nor his other creditors are before the court.

It is insisted for the bank that the trust company should be required to

exhaust the fund arising from the Mann fee before resorting to the bank fund, under the rule that a creditor having a lien on two funds, on one of which another creditor has a junior lien, will be required to exhaust first the fund not incumbered by the junior lien. But that rule has no application, as the bank is not a creditor of Stone's, and as the creditor of Sudduth it cannot impose terms on the trust company as the creditor of Stone. What may be the right of the bank to Sudduth's part of the Mann fee cannot be determined here, as the necessary parties are not before the court.

Judgment reversed, and cause remanded, with directions to enter a judgment in favor of appellant.

INDORSEMENT FOR COLLECTION—EFFECT OF.

Supreme Court of Nebraska, November 20, 1901.*

FIRST NATIONAL BANK OF HASTINGS vs. FARMERS AND MERCHANTS' BANK.

An indorsement "for collection and return" vests in the indorsee no general property in the paper, but merely constitutes him an agent for the purpose of collecting the instrument.†

OLDHAM, C. (omitting part of the opinion): The indorsement of the draft by the defendant the United States National Bank was, as appears from plaintiff's petition, as follows: "Pay First National Bank, for collection and return to United States National Bank, Omaha, Nebraska. M. T. Barlow, Cash." In the recent case of United States Bank vs. Geer, 55 Neb. 462, 75 N. W. 1088, 70 Am. St. Rep. 390, this court, after a careful re-examination of the question, determined that a restricted indorsement of this character vests no general property to the paper in the indorsee. It merely constitutes him an agent for the purpose of collecting the instrument. Hence, if the agent has paid over the funds collected by him to his principal without notice, there could be no recovery against him on such a restricted indorsement, even though a prior indorsement of the draft should prove to have been a forgery.

TRUST FUND—CHECKS SIGNED AS "GUARDIAN"—NOTICE TO PAYEE.

Court of Appeals of New York, October 6, 1903.

COHNFELD vs. TANENBAUM.

Where a bank account is kept in the name of the depositor as "guardian," all moneys paid into such account belong presumptively to his wards.

Where the drawer of a check adds the word "guardian" to his signature, it is notice to the payee that the funds do not belong to the drawer personally, and the payee is put upon inquiry to ascertain the authority of the drawer to apply them in payment of his own debt, or that of some third person.

CULLEN, J.: The action was brought by the plaintiff in his own right and as assignee of his brothers and sisters, children and wards of Isidore

* Withheld from earlier publication by order of the court.

† The Negotiable Instruments Law provides as follows: "A restrictive indorsement confers upon the indorsee the right:

1. To receive payment of the instrument;
2. To bring any action thereon that the indorser could bring;
3. To transfer his rights as such indorsee, where the form of the indorsement authorizes him to do so.

But all subsequent indorsees acquire only the title of the first indorsee under the restrictive indorsement." (Sec. 67 New York Act.)

Cohnfeld, deceased, to recover from the defendant the amount paid to him by said guardian by three checks, aggregating the sum of \$1,200.

The case was tried on an agreed statement of facts, which is extremely meager in its details. By such statement it appears that said Isidore was appointed guardian of said children on January 2, 1885. On January 1, 1886, he had in his possession moneys of his wards amounting to \$10,355.79, and in March, 1892, he opened an account in the New York Security and Trust Company in the name of Isidore Cohnfeld, guardian, and deposited therein the sum of \$12,000. At the same time he filed with the trust company a certificate of his appointment as guardian by the surrogate of New York county. Various deposits were made to the credit of that account, and checks drawn against it. No information is given as to the sources from which the moneys deposited were obtained, or the purposes to which the checks drawn on the account were appropriated, except that there were from time to time some moneys of the Cohnfeld Manufacturing & Trading Company, a corporation of which the guardian was manager, deposited in the account. What those sums were, or what checks were drawn against them, is not stated. From the bank account it appears that on January 1, 1893, all the moneys had been withdrawn except a balance of \$61. In August, September, and December of that year the guardian drew three checks, the subject of this action, and delivered them to the defendant in payment of claims for rent he held against the Cohnfeld Company. The guardian died in April, 1896, without ever having accounted to the wards for their property. The defendant had no knowledge of the rights of the parties to the moneys paid to him, except such as was given to him by the form of the checks, which were signed "Isidore Cohnfeld, Guardian." On these facts the trial court rendered judgment for the defendant, which has been affirmed by the Appellate Division.

We think the courts below erred in their disposition of this case. From the extremely meager character of the evidence, it will be seen on final analysis that the determination of the case must be governed by presumptions. The signature to the check, "Isidore Cohnfeld, Guardian," gave the defendant notice that presumptively the funds being paid to him were not those either of the Cohnfeld Manufacturing Company or of Isidore Cohnfeld personally, and he was put on inquiry to ascertain the authority of Cohnfeld to apply the money in payment of the company's debt. (*Gerard vs. McCormick*, 130 N. Y. 261.)

This proposition is conceded by both the courts below. Had he made the inquiry, he would have learned the facts which have already been stated. He is, therefore, chargeable with all that those facts import, or which is fairly to be inferred from them. It is to be noted that the parties did not admit, nor did the court find, that at the time at which the checks in suit were drawn there was a dollar of the moneys of the Cohnfeld Company remaining in the accounts, nor are there any facts admitted or found from which such an inference can be drawn. The finding is that moneys of the company were deposited in the account, and payments made from the account on its behalf, but not a word as to the amount of the deposits or the amount of the payments.

It is very evident that the first question to be determined is, to whom, on this state of facts, did the moneys of the account *prima facie* belong, and

this question is to be decided between the plaintiff and the defendant, the same as it would be between the plaintiff and the company were that company asserting its rights to the moneys on deposit. No evidence was given by the plaintiff to show that any of the moneys of the wards were deposited in the account subsequent to its depletion in January, 1893, and for this reason the courts below were of opinion that the plaintiff had failed to identify the moneys paid to the defendant; but it was not necessary for the plaintiff to give evidence on the subject. The account was that of the wards, or of their property. There is neither finding nor proof that the guardian embezzled the money withdrawn by him prior to January, 1893. The money may have been drawn out for investment, or other legitimate purposes, and when moneys were subsequently received by the guardian from such investments, it was his duty to again deposit them.

But if we assume that the guardian had embezzled the money, the obligation existed to make restitution, and his subsequent deposits, from whatever sources received, would be an appropriation of those moneys in satisfaction of his wards' claim against him. From such time they became the infants' moneys as against every one except one who, claiming the moneys, could show they had been wrongfully diverted. (*Baker vs. New York National Exchange Bank*, 100 N. Y. 31.)

In the opinion of the learned Appellate Division it is said: "It is immaterial that in this case the account was opened and continued in Cohnfeld's name as guardian. We have a mixed fund to deal with, in which moneys of different parties were mingled by one occupying a fiduciary relation to both parties, and the rights of these parties are to be settled upon equitable principles."

We entertain a different view. We think the point on which this case turns is the name and character in which the account was opened and kept. In the absence of proof to the contrary, all the moneys in that account were presumptively the property of the wards. For another party to successfully reach any part of the fund, it would be insufficient to show merely that moneys of the party had been improperly placed in the account; it would be necessary to go further, and to prove the amount so deposited; in other words, the burden of proof would rest on the claimant to establish just what portion of the fund belonged to him, and the remainder, as to which he failed to affirmatively show title, would be awarded to the party in whose name the account stood, and to whom it presumptively belonged. As already said, there is no proof in the case that at any time any particular sum on deposit was the property of the Cohnfeld Company.

These views dispose of the objection that the plaintiff failed to comply with the rule that to follow trust funds they must be identified. The funds in this case were identified by their deposit in the trust company to the credit of Cohnfeld, guardian. Nor do we see that the rule adopted in *Clayton's case* (*Devonnes vs. Noble*, 1 Merivale, Ch. Rep. 572) has any application to this case. That rule, that the earliest draft should be charged against the earliest deposits, might apply if it appeared that the moneys on deposit were insufficient to satisfy the claims of both *cestuis que trustent*—the wards and the Cohnfeld Company; but it has no bearing on the proposition that the burden rested on the Cohnfeld Company or on the defendant, who claims under it, to establish that it had any claim on the trust fund.

The judgment should be reversed, and a new trial granted; costs to abide the event.

Parker, *C.J.*, and Bartlett, Haight, Martin, Vann and Werner, *JJ.*, concur. Judgment reversed, etc.

OVERDRAFTS—WHEN CASHIER LIABLE FOR.

Court of Appeals of Kentucky, October 27, 1903.

FIRST NATIONAL BANK OF PINEVILLE vs. REESE.

The Cashier of a bank is not liable for loss incurred upon paper discounted by him, if in making the discount he exercised such care, diligence and discretion as an ordinary discreet and prudent man would exercise in the management of his own business of a like nature.

The same rule applies where overdrafts are permitted by the Cashier.

This was an action upon the bond of the defendant as Cashier of the plaintiff bank. It was alleged by the plaintiff that the defendant, while acting as such Cashier, and during the year named, he failed to faithfully and properly discharge his duty as such Cashier, in that he paid checks drawn by E. C. Richardson when he had no money to meet them, and the same were overdrafts. The defendant denied that he allowed or paid any overdrafts of Richardson, but alleged that when he was Cashier of appellant he was, by the direction and sanction of the board of directors, authorized to lend the money of the bank, and that it was the custom and usage of the bank, sanctioned, approved and acted upon by the board of directors, that if a regular depositor of the bank, who was believed to be solvent and good for the amount of a check, drew a check on the bank at a time when he did not have a deposit or funds sufficient to pay the check, the bank would advance for and lend to him the amount of the check, and, with the money so loaned, pay the check, and the amount so paid was a loan by the bank to the depositor, and a check, until paid or redeemed, was held by the bank as a "cash item;" that, at the time of the different checks of Richardson were presented, Richardson was a regular depositor of the bank, and was considered good and solvent for the amount of each and all of the checks, but did not have the money on deposit with which to pay them, and, acting under the rule and usage of the bank, he, as Cashier, advanced and loaned to him, from the funds of the bank, the money for the payment thereof, and with that money paid the checks, and held them as a loan, under the head of "cash items."

NUNN, *J.*: The appellant contends that the lower court erred in not sustaining a demurrer to the answer of appellee, claiming that it did not present any defence to the action; that a Cashier cannot avoid liability under any such usage or custom as alleged in his answer, or by the consent or direction of the directors of the bank; that, if he chose to make a loan under such circumstances, he does it at his peril, and, if loss is sustained, he must make it good to the bank. Appellant cites respectable authority to support its contention. But in the case of Pryse, etc., vs. Farmers' Bank, etc., 33 S. W. 532, which was a case the facts of which were very similar to the case at bar, the court, by Judge Hazelrigg, announced a different principle from that claimed by appellant.

In the Pryse Case the lower court told the jury, in an instruction, that if the Cashier permitted Bullock and others to overdraw their account, and loss

resulted thereby, they should find for the bank the amount of such loss. This court reversed that case by reason of that error and others therein discussed. The court, in discussing the instruction referred to, used this language: "Again, the second instruction assumes it to have been negligence in itself to suffer the overdraft to Bullock and others. This is not the law of this case. If the directors might have made these loans—for that is what the overdrafts were—then the Cashier might have done so by reason of the condition already alluded to; and that the directors might have done so, under an agreement with the patrons named, seems well settled.

While denying such right to the Cashier generally, Mr. Morse, in his work on Banks and Banking, says: 'Of course, however, there is a power in a bank to allow overdrafts.' (Volume 1, § 358.) If the Cashier is held liable on this account, it must be by his failure, first, to make reasonable inquiry into the financial standing of those making the overdraft; and, second, to exercise the discretion required in the fifth instruction; and this, we add, is the criterion by which the Cashier's conduct is to be judged." The fifth instruction, referred to, said that the Cashier is not to be held responsible for any loss in discounting paper if he exercised such care, diligence, discretion, and judgment as an ordinary discreet and prudent man would exercise in the management of his own business of a like nature. This appears to be the correct rule by which to determine the liability of bank officials, where the facts appear as in the Pryse Case and the case at bar, where the Cashier, without the aid of a finance committee or the direction of a board of directors, acts upon the custom and usage of the particular bank by the advice of the President and directors individually, and upon his own judgment as to the best interest of the bank. Under such a state of case, it would seem a great hardship on him to establish any other rule to determine his responsibility.

The court gave two instructions to the jury, and by them, in effect, submitted the principles above referred to, and the jury determined that appellee, under the facts proven, observed the diligence required of him before cashing the drafts and making the loans to Richardson. Wherefore the judgment of the lower court is affirmed.

HOLDER OF BANK STOCK AS COLLATERAL—WHEN LIABLE TO CREDITORS.

Supreme Court of California, September 3, 1903.

HURLBURT vs. ARTHUR, *et al.*

In order that a person holding bank stock as collateral security may be entitled to exemption from liability to creditors, it must appear upon the books of the bank that he is only a pledgee.

If he appears upon the books as the owner of the stock, he will not be permitted, as against creditors, to show that he holds the stock simply as pledgee.

This was an action to enforce the liability of the defendant as a stockholder in the Union Savings Bank, of San Jose, California, which institution had become insolvent.

LORIGAN, J. (after examining the statutes of California bearing upon the subject): It was doubtless the intention of the Legislature to make persons liable as stockholders whenever they appeared to be such on the face of the corporation books. Motives of public policy would suggest such legislation and the fundamental idea inspiring it would be to afford the greatest protec-

tion to creditors of a corporation, and to the highest extent secure them against loss. A creditor dealing with a corporation can have no assurance of its financial responsibility except such as he gathers from the examination of the stock register to ascertain who its stockholders are; and the Legislature intended, as this was the only practical way in which the creditor could obtain information, to make the stockholder responsible to him to the extent and in the capacity his relation to the corporation appeared from the inspection of its books. It was a very easy matter for the appellant in this case, as it is equally so for persons holding stock as collateral security in any case, to have the record of the corporation show his exact relation to the stock upon the corporate books. And, as far as the validity of a pledge of stock is concerned, that could legally exist independent of any transfer upon the books of the corporation from the pledgor to the pledgee. (*Spreckles vs. Nevada Bank*, 113 Cal. 277.)

As the pledgee might show what the real transaction was upon the books of the corporation, the law has fixed as a penalty for his failure to do so a responsibility to the same extent that would follow had he in fact been the owner of the stock, and appearing as such upon the stock register. And we can understand how the necessity for showing the true relation in which stock of a corporation is held would be particularly applicable in cases of bank depositors, where the principal, if not the only, reliance a depositor may have for the return of his money is upon the financial responsibility of its stockholders; and he can only ascertain that responsibility by an inspection of the list of the stockholders as disclosed by the books of the bank.

If, as contended by appellant, one who appears upon the books of the bank as a stockholder is not within the exception in the section, but may relieve himself of all responsibility to depositors by showing that he holds the stock as pledgee, we would have this condition: that while, upon the face of the books, the stockholders would consist of persons financially able to meet any possible claims, yet in truth they would be but nominally so, and in reality represent undisclosed, embarrassed stockholders, from whom the depositor would be compelled hopelessly to look for payment, although he became a depositor solely upon the responsibility of the stockholders as exhibited by the books. It is no answer to say that this same condition of things might exist if the books showed that these apparent stockholders were in reality pledgees of the stock. The vital difference is that in the first instance the depositor is misled by an apparent financial responsibility; in the second, he is aware of the true condition of things, and can govern himself accordingly.

The reason for this rule of liability is aptly stated by the court in *Magruder vs. Colston*, 44 Md. 357, speaking of an undisclosed pledgee on the corporate books: "The reason for this is obvious. The stock stands on the books of the bank in his name, and he is thus held out to the public as a shareholder, and persons dealing with the bank have no means of knowing the nature of the contract under which he holds the stock, and have a right to presume and are led to believe that he is the absolute owner of it; and it is but fair to presume that they deal with the bank upon the faith and credit of parties thus appearing as stockholders. Stockholders are those who appear on the books of the bank as owners of shares, and who are entitled to manage its affairs; and they can only throw off the liability incident to that relation by transferring the stock. Until this is done, they continue to be stock-

holders within the meaning of the Banking Act. If we depart from the terms of the law, and inquire into the equities which may exist between the stockholders and third persons, it cannot fail to embarrass creditors in seeking a remedy for the wrongs which have been done by the corporation. If creditors must look beyond the legal title as exhibited by the books of the bank they can never know against whom to proceed."

As to the construction which is to be placed upon these sections of the Code we are aided in a very large measure by the construction which the Supreme Court of the United States has placed upon almost identical sections in the National Banking Act. Section 5210 of the Revised Statutes [U. S. Comp. St. 1901, p. 3498] provides that National banks shall "keep at all times a full and correct list of the names and residences of all stockholders in the association and the number of shares held by each, in the office where its business is to be transacted. Such list shall be subject to the inspection of all the shareholders and creditors of the association."

By section 5152 [U. S. Comp. St. 1901, p. 3465] thereof it is provided that "persons holding stock as executors, administrators, guardians or trustees shall not be personally subject to any liability as stockholders." It will be thus observed that the recited sections are in the main very similar to our own, and the Supreme Court in construing them has uniformly held that the books of the bank are conclusive in actions brought by creditors as to who are stockholders thereof.

In *Pauly vs. State L. & T. Co.*, 165 U. S. 620, it is said: "Manifestly one, if not the principal, object of this requirement [listing] was to give the creditors of the association, as well as other authorities, information as to the stockholders upon whom, if the association became insolvent, will rest the individual liability of its contracts, debts, and engagements. It is true that one who does not in fact invest his money in such shares, but who, although receiving them simply as collateral security for debts or obligations, holds himself out on the books as a true owner, may be treated as the owner. * * * If, as between creditors and the persons assessed, the latter is not held bound by that representation, the list of shareholders required to be kept for the inspection of creditors and others would lose most of its value."

In *Anderson vs. Phila. Warehouse Co.* 111 U. S. 479, it is said: "It is well settled that one who allows himself to appear on the books of a National bank as an owner of its stock is liable to creditors as a shareholder, whether he be the absolute owner or pledgee only." (*Germania Nat. Bank vs. Case*, 99 U. S. 628.) And the general rule upon this subject is, that, in the absence of an express statute to the contrary, the liability to pay calls and to respond to creditors in the event of insolvency of the corporation attaches to the holder of the legal title to the stock, and the courts will not look beyond the registered shareholder, nor inquire under what equity he holds; and so one who takes stock as collateral security, and has it transferred to himself and so registered on the books of the company, will be liable to the creditors. (Cook on Stock and Stockholders, §§ 247, 253; 3 Com. on the Law of Cor. [Thompson], §§ 3192, 3194, 3213; *Rosevelt vs. Brown*, 11 N. Y. 156; *Davis vs. Essex Baptist Soc.* 44 Conn. 585, Fed. Cas. No. 3,633; *Sherwood vs. Ill. Tr. and Sav. Bank*, 195 Ill. 118; *Holyoke Bank vs. Burnham*, 11 Mass. 183; *Pullman vs. Upton*, 96 U. S. 330; *Wheelock vs. Kost*, 77 Ill. 296.)

Some of these cases cited have reference to claims of non-liability by per-

sons who were in fact trustees, although they did not so appear upon the books of the company. They were, nevertheless, held liable, and the same reasoning which would apply in such cases is equally applicable to persons claiming exemption from liability as pledgees under our section of the Code, because any immunity from liability which is there given to trustees is equally extended to pledgees. They both stand upon the same legal plane in this respect.

We are satisfied from these authorities that, while the holder of stock as collateral security is entitled to an exemption from liability as to the creditors of the corporation, that exemption can only be availed of where it appears upon the face of the books of the corporation that he holds such stock in pledge; but that where, from the books of the corporation, he appears to be a stockholder, and there is nothing to indicate that he holds the stock as pledgee, or in any other capacity than as owner thereof, he will be held liable to creditors from the position he thus assumes upon the books, and will not be permitted to show that he is in fact simply a pledgee of the stock. As to him the books of the corporation are conclusive. (*Baines vs. Babcock*, 95 Cal. 593, 27 Pac. 674.)

The appellant has cited us to three authorities from three different States—Maryland, Missouri and New York—and a decision from the Supreme Court of the United States, in which these various State decisions are cited. In none of these States was there any section of the Code similar to ours in its definition of a stockholder and the extent of his liability; nor, upon their examination, do they seem to be well-considered cases. In one of them—*Matthews vs. Albert*, 24 Md. 527—the statement that a person appearing upon the books of a corporation as a stockholder may show that he held the stock simply as collateral security is the mere arbitrary declaration of a conclusion. No authorities are cited to sustain it, and no reasons are given showing why it is reached. Main reliance, however, is placed upon the decision from the Supreme Court of the United States—*Burgess vs. Seligman*, 107 U. S. 20—in which, as above said, the State authorities are referred to. In this latter case, however, the defendant held stock directly from the corporation. He held it in trust as security for money advanced, and the stock transfer book of the company showed that the stock was “held in escrow” by him. The court held that the plaintiff had actual notice and knowledge of the manner in which defendant held the stock; that he had derived a benefit from the transaction between the corporation and Seligman; and further found that, if the stock had not been issued to the defendant, it would have remained in the treasury of the corporation, and hence the plaintiff would have been no better or worse off. The peculiar conditions surrounding that case seem to have actuated the decision of the court in behalf of the defendant. It certainly does not present the same case as where a party appears upon the books of the corporation, absolutely as a stockholder, and endeavors to defeat that situation as against a creditor who is not advised that he held any other relation to the corporation than such as the corporate books disclosed.

We are satisfied that from the authorities and for the reasons suggested the judgment of the lower court was right, and it is affirmed.

RIGHT OF HOLDER OF CHECK TO SUE BANK.

Supreme Court of Iowa, October 6, 1903.

BLOOM vs. WINTHROP STATE BANK.

The holder of an unaccepted check may bring suit thereon against the bank in his own name.*

This was an action upon a check bearing date August 4, 1899, drawn upon the defendant bank for the sum of \$191.10, signed by I. T. Bloom, and made payable, by its terms, to the plaintiff or bearer.

BISHOP, C. J. (omitting part of the opinion): Upon the question of the right of the holder of an unaccepted check to bring suit thereon in his own name, the courts of the country are not agreed. However, we regard the rule as settled in this State in favor of such right. It was so decided in *Roberts vs. Corbin*, 26 Iowa, 315, and the rule there announced has been either acquiesced in or affirmed in several subsequent cases. Among others are the following: *Schollmier vs. Schoendelen*, 78 Iowa, 426; *May vs. Jones*, 87 Iowa, 188; *Thomas vs. Exchange Bank*, 99 Iowa, 202. The reasoning upon which the rule is based is fully stated in the cases cited, and need not be repeated here.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B., Barrister, Toronto.]

*PROMISSORY NOTE—FUNDS OBTAINED FOR ELECTION PURPOSES—
DOMINION ELECTIONS ACT, CH. 8, SEC. 131.*

ST. PEIBRE vs. L'ECUYER (Quebec Reports, Superior Court, Vol. 23, p. 495.)

Held, There is no action for the recovery of the amount of a promissory note or of a renewal originally given for the purpose of raising funds to be used at an election.

STATEMENT OF FACTS: The plaintiffs are the heirs of the late Dr. Gatien, and bring this action on a promissory note made in favor of the plaintiffs on March 8, 1900, for \$100, payable twelve months after date, signed by the defendant.

The defendant pleaded that on the voting day for the Federal election in 1896 a joint and several note for \$400 was made by Dr. Gatien himself, and two others, and was discounted at the Eastern Townships Bank for the purpose of providing funds to promote the election of one of the candidates for the County of Shefford; that the proceeds of the note were used for that purpose; that the note was subsequently renewed at the bank, when the late Dr. Gatien arranged to get the money on the note of the same four parties from one Bedard, and paid the bank off; that later he paid Bedard, and defendant gave the note sued on as representing his one-fourth of the payment; and that in effect he cannot be compelled to pay the note, inasmuch as it was given without any legal consideration and against law and public order.

*This rule has now been changed in Iowa by the Negotiable Instruments Law, which provides:

"A check of itself does not operate as an assignment of any part of the funds to the credit of the drawer with the bank, and the bank is not liable to the holder, unless and until it accepts or certifies the check." (Sec. 325, New York Act.)

JUDGMENT (LYNCH, J.): The evidence clearly establishes the allegations of the defendant, and that the original note was given for the purpose of raising money to be used in the then pending election. Defendant relies on sec. 131 of ch. 8 R. S. C., "The Dominion Election Act," which provides: "Every executory contract or promise, or undertaking in any way referring to, arising out of or depending upon any election under this act, even for the payment of lawful expenses or the doing of some lawful act, shall be void in law."

This is very strong language and has been very strictly interpreted in our courts. Where the parties have a knowledge of the intention of the contract, it is difficult to see a way in which the statute may be successfully evaded. Our civil law is equally strict. Article 989 C. C. declares: "A contract * * * with an unlawful consideration has no effect;" and Article 900: "The consideration is unlawful which is prohibited by law."

The decisions of our courts are unanimous in holding that promissory notes given under such circumstances are illegal, and that the amount payable under them cannot be recovered. Here the late Dr. Gatién knew the purpose for which the original note was given; and were he the plaintiff in the present action it is hardly supposable that it would be concluded that he could recover. The plaintiffs, as his representatives, have no greater rights than he would have. The subsequent promise of the defendant to pay his part does not change the position; it arises out of the tainted contract, and that is sufficient.

It is said that in honor the defendant ought not to invoke such a defence; that is possible; but he has done so and effect must be given to it. The action is dismissed.

PROMISSORY NOTE—ENDORSER.

TROTTIOR vs. RIVARD (Quebec Reports, Superior Court, Vol. 23 p. 528.)

Held, The obligation of an endorser of a promissory note is a conditional one of which the condition is that the note be protested and that notice of protest be given to the endorser. Consequently the endorser has no action against the maker for indemnity, even though the note has matured, so long as it has not been protested, and that notice of protest has not been given.

STATEMENT OF FACTS: The plaintiff sued for the sum of \$173.43, of which \$93.43 was for work done and materials supplied and the balance of \$80 was claimed on a note given by the defendant to the order of the plaintiff, which the plaintiff had endorsed and discounted with the Banque Nationale. The note was in possession of the bank at the time the action was commenced.

The defendant admitted owing \$93.43 on the first count, but pleaded that the plaintiff had no right to payment of the note because he was not the legal holder of it; nor had his liability as endorser come into effect.

JUDGMENT (LANGELIER, J.): The facts of the case have not presented any difficulty and raised only the one question of law. The defendant signed the note sued on, which was payable to the order of the plaintiff. While the plaintiff was legal holder of this note he endorsed it and discounted it with the Banque Nationale. Before it came due the defendant became insolvent, with the result (under the Quebec law) that he lost the benefit of the time he

would have had for payment of his note which became payable immediately upon the insolvency of the maker. The note, however, was not then protested and had not matured according to its face at the time of the commencement of this action.

It is under these circumstances that the plaintiff sued to be indemnified as endorser.

I am of the opinion that this action is not well founded. The obligation of the endorser of a note is not an obligation pure and simple but is a conditional obligation, and its condition is that on non payment the note be protested and notice of protest be sent to the endorser. If this is not done it follows that the conditional obligation never becomes operative against the endorser.

Against this proposition has been cited the case of *McKinnon vs. Keranac*, 15 R. L. p. 34; but this case was decided under the old law, article 2310 of the Civil Code, before the Bills of Exchange Act was passed. The old law declared an endorser to be equally liable with the maker to a third party. Section 86 of the Bills of Exchange Act now provides "presentment for payment is necessary in order to render the endorser of a note liable." The endorser is not bound unless presentment for payment has been made and the note protested for non-payment. This point does not seem to have been raised in the Court of Appeal in *McKinnon vs. Karanac*, but the Court of Appeal has upheld the view taken by me in the case of *Vannier vs. Kent*, R. J. Q. 11 B. R. 373.

Section 51 of the Bills of Exchange Act provides: "In the case of a bill drawn upon any person in the Province of Quebec, or payable or accepted at any place therein, in default of protest for non-acceptance or non-payment, as the case may be, and of notice thereof, the parties liable on the bill other than the acceptor are discharged."

The plaintiff argues from this, that if the endorser is discharged from liability by failure to protest a note, he must have been bound before the note matured, and therefore must have a legal status to sue before maturity.

Without doubt the endorser is bound from the time of endorsing the note, but this clause does not say he is bound absolutely; he is bound only conditionally, and it is from this conditional obligation that he is discharged by virtue of sec. 51 when there has been a failure to protest the note for non-payment. No liability as endorser has attached to the plaintiff, and he has no cause of action for indemnity.

This action must be dismissed with costs.

*SALE OF BANK SAFE—WARRANTED BURGLAR-PROOF—SUBSEQUENT
BURGLARY—DAMAGES.*

DENISON vs. TAYLOR (Ontario Law Reports, Vol. 6, p. 93).

STATEMENT OF FACTS: The plaintiff is a private banker, who purchased a burglar-proof door from the defendants under the circumstances set out in the judgment. Shortly after the plaintiff's safe was broken open by burglars, and \$2,000 carried off. This action was brought against the defendants to recover the sum of \$2,000, and \$250, being the price paid for the door. The further facts will be found in the judgment of Mr. Justice Street.

JUDGMENT (STREET, J.): The plaintiff wrote the defendants on August 27, 1902, upon note paper headed "R. E. Denison, Banker": "Can you give

me a rough estimate of what a burglar-proof door with proper frame complete will cost?"

The defendant replied on August 28, 1902: "We can build you a burglar-proof door of any size and description you wish. The cheapest door we now make is \$250. * * * The door we have reference to is our No. 67, the outer door being 1½ inches thick, the entire surface protected with hardened drill-proof plate. * * * Next better quality of door to this is one 1½ inches thick at \$400, and the next \$550." In this letter they enclosed cuts from their sample book of three vault doors called Nos. 67, 68 and 69; the two latter were called "Fire and Burglar Proof Vault Doors;" No. 67 was called "Fire Proof Vault Door with chilled steel lining," and the printed note below the cut read as follows: "The above cut represents our vault doors suitable for post offices, court houses, insurance offices, etc., and are made with a lining of chilled steel, covering the entire surface of outer door."

The plaintiff replied to this: "Would No. 67 furnish a fair protection against burglars? Kindly answer this before Tuesday." The defendants replied on September 2, 1902, by telegram: "Letter just received. Number 67 door gives both fire and burglar-proof protection." On September 11, the plaintiff wrote to the defendants: "Please forward by first boat vault door No. 67 referred to in our recent correspondence, and draw on me for the amount;" and on the same day the defendants wrote to the plaintiff accepting his order. On November 11, 1902, the plaintiff wrote the defendants that the door had been blown open by burglars, and that from the ease with which the lock was forced he thought the door was defective, and that he would look to them for his loss.

From the evidence I should come to the conclusion that the handle to the spindle by which the lock is turned had been knocked off and dynamite had been introduced between the spindle and the door plates; the explosion of the dynamite then stripped the nuts which held the door plates together, and gave easy entrance to further explosives by which the door was wrecked. It appears from the evidence that less than half an hour's work by an expert would accomplish this result. The door having been taken to pieces during the progress of the trial, it was found that the centre layer of the three layers making up the door, which was supposed and represented to be hardened and drill-proof plate, was neither hardened nor drill-proof, and was easily perforated by an ordinary hand drill in a minute and a half.

I am asked by the plaintiff's counsel to construe the correspondence between the parties as containing an absolute warranty on the part of the defendants that the door furnished by them to the plaintiff was proof against the efforts of burglars, without qualification as to time or place. This, as has been pointed out in the cases, would in fact amount to a contract by the defendants insuring for years, if not for all time, the contents of the vault, whatever they might be, against burglars. Such a contract might, of course, be made, but the responsibility incurred under it would be so great that the intention of the parties to make it ought clearly to appear.

I think the circumstances here negative an intention on the part of the defendants to give a warranty so far-reaching; and it is apparent, I think, that the plaintiff did not expect or ask for one. The wood cuts taken from the defendants' catalogue, which they sent him before the contract was made, showed several doors, of which he chose the cheapest. The more expensive

ones—those he rejected—were called “Fire and Burglar Proof Vault Doors;” the one he chose was called only “Fire-Proof Vault Door.” He can not reasonably be supposed to have expected the same security against burglars from a cheap door, which the makers only called “fire proof,” as from an expensive one, which they called “burglar proof” as well as “fire proof.” His view at the time was expressed by the terms of the letter he wrote them asking whether the door in question would furnish “a fair protection against burglars.” The defendant’s reply to this letter was a telegram that the door in question “gives both fire and burglar-proof protection.” It would be straining the language of this reply to construe it into a warranty that no fire, however hot and however long continued, could destroy the doors, and that no burglar, however skilful, could, with sufficient time at his disposal, break through them, and I must therefore, I think, determine that no absolute warranty or insurance of this kind was given. If no absolute warranty was given, then I think the warranty which was given is that which would have been created by an answer simply in the affirmative to the plaintiff’s question whether the door in question would furnish “a fair protection against burglars.” The defendants, therefore, I think, did warrant, in this part of their correspondence, that the door in question would furnish a fair, that is to say, a reasonable, protection against burglars; and in a former part of the correspondence, that the entire surface of the door was protected by hardened drill-proof plate, which was composed of chilled steel. The warranty that the door would furnish a reasonable protection against burglars means, I think, that so far as the thickness of the plates used would admit, the securities against burglary were as complete as the experience of safe makers could make them. The more expensive doors had thicker plates, which enabled the manufacturers to make closer fitting spindles, and so offered, or were supposed to offer, greater protection against burglars than the door selected by the plaintiff.

In my opinion, both the warranties I have referred to as having been given were broken. Through the negligence of the defendants’ workmen, and not by any wilful act of the defendants, the door which they sold to the plaintiff was, as it now appears, lacking in the simplest and first requisite which should be found in a door intended to resist burglars, that is to say, a chilled steel or drill-proof lining. The lining which was intended to be drill-proof was there, but it had not been chilled, and could, therefore, be easily drilled in any part by an ordinary hand drill. This defect, however, was not taken advantage of by the burglars who robbed the plaintiff. They appear to have proceeded upon the assumption that the door was drill-proof, and they adopted another means of introducing their explosive than by attempting to drill the door. I should find upon the evidence before me that, even had their door been as complete as doors of the same thickness could be made, so far as the experience of safe makers extended at the time it was made, it would not have resisted the attack of the burglars who broke it open, taking into consideration the favorable circumstances under which they worked, and the means at their command.

The warranties given, however, have been broken, as I have pointed out, and the question is as to the amount of damages recoverable. I find that the loss of the money contained in the vault was not a natural consequence of the defects in the vault door, because the presence of those defects was not

the reason why the burglars were enabled to break it open, and the result would not have been different had the defects been absent.

The ordinary rule as to damages where an article supplied with a warranty that it is of a particular character or fit for a particular purpose, proves to be of a different character or unfit for the purpose for which it is supplied, is that the purchaser is entitled to the difference in value between the article supplied and one which would have complied with the warranty. That rule is easily applied where the article actually supplied and that which should have been supplied have each some commercial value. In the present case it is difficult to apply it; the plaintiff needed a door which should afford reasonable protection against burglars, and the defendants supplied a door which they warranted would give that protection. Being applied to the purpose for which it was intended, it was found not to comply with the warranty, and was rendered practically valueless. The defect was a concealed one, and under ordinary circumstances was only discoverable by a test which would destroy it. The defendant, Thomas West, in his evidence says, that the door would not be called burglar-proof without the chilled steel plate, which this door was warranted to contain and did not contain. The plaintiff, therefore, did not get that which he paid for and which the defendants warranted he should get; what they gave him in its place has become useless and valueless while being put to the use for which it was intended. It is not, therefore, the case of a partial loss, as it would have been had it been a mere case of indifference in commercial value, but that of a total loss like that of the broken carriage pole in *Randall vs. Newson* (1877), 2 Q. B. D. 102.

The plaintiff is entitled, in my opinion therefore, to recover as damages the price, \$250, which he paid to the defendants for the door in question, and the costs of the action.

NOTICES OF NEW BOOKS.

MONEY AND CREDIT. By WILBUR ALDRICH. New York: The Grafton Press.

A new edition of this work has been issued, and considerable matter has been added. The chapter relating to the quantity of money has been carefully re-written, and it is the belief of the author that he has succeeded in clearing up much of the confusion of theory and statement that has heretofore existed in relation to the influence of the quantity of money upon the prices of commodities.

We have fully reviewed Mr. Aldrich's book in an earlier number of the *MAGAZINE*, and commended it as a substantial contribution to financial literature.

ROBERT MORRIS, PATRIOT AND FINANCIER. By ELLIS PAXSON OBERHOLTZER, Ph. D. New York: The Macmillan Co.

The services which Robert Morris rendered to the cause of American independence entitle him to a high place among the list of Revolutionary patriots. As Superintendent of Finance he succeeded, under most trying circumstances, in providing the means for the successful prosecution of the war. His distinguished abilities were clearly recognized by Washington and Hamilton, who paid the warmest tributes to his worth.

Morris was instrumental in founding the Bank of North America, which helped greatly in sustaining the public credit at a critical time in the country's history.

Mr. Oberholtzer has not only given a very complete account of the public services of Robert Morris, but has written a remarkably interesting book as well.

*THE PRACTICAL WORK OF A BANK.

DEFALCATIONS AND EMBEZZLEMENTS.

IV.

Defalcations and embezzlements by bank officials or employees constitute a bridge on the road to banking which many of us seldom dream of having to cross, until a turn in our road brings the gloomy structure to view. I do not believe there will ever come a time when defalcations or embezzlements will cease, even though the Chinese method as applied to dishonest bank officials should be adopted. Human nature is weak and temptation strong. An ounce of prevention is what we want in this line, for the cure is always painful to those committing the above crimes as well as to their friends or relatives.

Such suggestions as will be made by me are the results of a banking experience from the position of night watchman to a Cashiership. I will try to begin at the top and work from the highest to the lowest person concerned in the successful work of an ordinary city bank.

THE WORK OF BANK EXAMINERS.

Let us begin first at the National bank examiner. He should be a man of practical banking experience and a successful banker, and should be appointed on account of his fitness for the position regardless of politics or influence. He should be paid a good salary on an increasing basis. This would give him full chance to do justice to every bank without having to run over some important detail. He should be put under heavy bond, and any crooked bank work which should have been detected by him at last examination and was not detected owing to ignorance or carelessness on his part, should be made good grounds for a judgment against his bondsmen. This would insure only fit men in the position of bank examiners and the men who had gone through a complete banking course at a prominent bank would then be in a far better position to detect errors and crooked work than those appointed from other lines of business. If we wanted some assaying of ore done we would not pick out a druggist to be our assayer, although our druggist may be a smart and popular man and may learn to assay in course of time, but yet not so well as the assayer who had first started as a miner and worked up for years and years. An examiner of the right kind should have a lifetime position if he perform his work well and correctly. In finding violations of the law in banks he should be required to notify all directors of such banks of such violations and have them express their excuses to the Comptroller at once for allowing such violations.

The ten per cent. loan limit should be strictly kept in force and the law so amended as to make it a personal offense and a finable one against the especial officers or directors concurring in such violations of this law. Reports of the Comptroller show quite a per cent. of violations of this law.

DUTIES OF OFFICERS AND DIRECTORS.

The discount board should meet often at the bank and should read over the loans,

* A series of articles to be published in competition for prizes aggregating \$1,050, offered by THE BANKERS' MAGAZINE. Publication of these articles was begun in the July, 1901, number, page 18.

discuss them and the collaterals, and the standing of the borrowers, with the other directors.

In the organization of a bank it should be provided by law that no director should have more stock, nor be allowed to control more, than any other bank director or official. For under the laws they are all supposed to be equally responsible for the successful and safe management of the bank's affairs, and they should be equally financially responsible. They should also be required to keep their stock in the bank free from debt. If officers and directors of a bank cannot comply with these suggestions they should sell out. Many of our banks are controlled by one or two men, although having a good set of directors and this has a tendency to make the directors of such bank's directors in name only, while they hardly realize that such is the case. If they were all equally interested in a bank then no one would hesitate about expressing his firm convictions in matters pertaining to his duty.

Each director should be required by law to state under oath that he had read the duties of a director and fully complied with them for the preceding year. We have the law swearing them that they will, but none making them swear that they have done their duty as prescribed by law.

How many of the directors in the banks of our smaller cities could give a good outline of their duties, responsibilities and powers? Each director should appoint himself a committee of one to keep eyes and ears open for his bank's interest; investigate, as far as possible, the standing, habits, associates, and extravagances of the bank officials and employees, and not hesitate to mention such things as he thought were for the bank's interest and safety.

Directors of many small National banks are entirely too lax in the strict interpretation of the banking laws as prescribed for the safe business life of such banks, and in many cases this laxity of interest on their part may be caused by the fact that they are, especially in small towns, interested just enough to become a director. The laws as laid down by the National Bank Act are wise and good and should be enforced to the letter and all directors should be held equally responsible and strictly so for infractions of such rules or laws.

Bank officials and directors should be prohibited by law from borrowing from their own bank and from creating overdrafts with such bank. They should be strong enough financially to obtain their money elsewhere. This would do away with the temptation to suddenly speculate in some imaginary good thing, as they would perhaps hesitate about borrowing from another bank to speculate with.

THE TELLER'S DUTIES.

The teller is one of the most important employees of the bank and one who should be a man above suspicion, and yet should be in a measure under surveillance at all times if possible. It is true no honest man likes to be watched nor does a dishonest man, but an honest man should never object to the strictest attention on the part of superior officers as to his personal habits, his associates, extravagances, and how he invests his idle money, if any. Right here I beg to suggest that it would not be a bad idea for banks, instead of refusing their employees the right to keep an account with them, to encourage such deposits by the employees and to allow such employees interest on their balances at quite a reasonable rate. This is no more than is done by many banks to outsiders, and if such a rule be followed it will increase the tendency to save on the part of the clerks, and prevent them many times from having their salary in a lump in cash in their pockets, thus giving them a larger amount than is necessary to spend and making them feel, for the time being, "flush."

Another idea I will venture, and that is that it would promote a feeling of good

will towards a bank for it to allow its employees to purchase a limited amount of the bank's stock, not at book price from some kind stockholder who wants to unload, but at much below book value, after he has served faithfully a number of years, and saved the money from his salary to pay for the stock, the bank paying the difference between book value and purchase price. It would not be a bad idea to notice if the teller or other employee has an extravagant family. Many wrongdoings have been traced to this cause.

The teller's cash should be kept in two different safes, he having the combination to but one, and that one having such cash as he actually needs in his day's business. Express money received and shipped should be received and shipped, sealed, or opened, before other than the clerk teller having final charge of same; all package money under strap or seal should be carefully counted by each receiving teller and a private seal or mark and date with other memoranda written on each label; he should be required to let outside business investments strictly alone; to be punctual and free from love of liquor, speculation, gambling or any of the customary vices. If he is found guilty of any of the above he should be at once kindly admonished in regard to it and if such a state of affairs is persisted in it would be better to remove him at once rather than to shut your eyes to his conduct, habits, or associates, outside your bank because he was a model behind the counter, or perchance was related to one of the largest stockholders or officers, and then after keeping your eyes shut for a time to suddenly have them opened by the bank reaping the harvest of what he has sown.

BOOKKEEPERS AND OTHER EMPLOYEES.

Pass books and statements should be made out by a different clerk from the one who makes the original entry; customers required to at once report on such statements of their accounts, and errors, if any, reported to an officer of the bank for investigation. Some banks have two entirely different sets of books covering the same accounts, and check with each other at irregular intervals. This is quite a good way, although an expensive one, to keep books straight.

The Cashier's check book, exceptions to statements, certificates of deposit book, and certified check account, should all be checked up carefully and regularly, or what is better at irregular times by other than the man making entries of such respective items. All long-standing Cashier's checks, foreign drafts, certified checks, or certificates of deposit should be replaced if possible with late issues, and large amounts in such cases should be examined and verified by the bank examiner as he does other accounts in hands of banks or parties outside. Banks should encourage their customers to have their books balanced at different times during the month rather than all on the first, as it is a help to the bookkeepers and a protection to the bank.

The exchange clerks, discount clerks, collection clerks, in fact all employees of the bank, should be given at various times, without warning, leave of absence and a new man of the force put upon their work with full instructions to report any irregularities or carelessness discovered by them. This will not only relieve an overworked clerk who needs rest, but will be a check upon his work and give another clerk a chance to learn another position in the bank outside his own as well as cause his work to be checked over. The same systematic open-eyed vigilance on the part of officers and directors will necessarily have to be exercised towards all clerks in the institution even down to the janitor or office boy.

The city collection clerk and messenger can often obtain the wrongful use of funds collected by them for months and years, undetected, and the above suggestions will never fail to detect such wrong doing on their part, unless the man put in such clerk's place should be crooked himself.

I have known three messengers in one bank to successfully carry on crooked work in their department for months, and I was assigned the task of ferreting out their methods, which was identically the same in each case, that of collecting for drafts and holding over the money until a future day, and about time for an inquiry or tracer to come in from the original owner, such amounts would be remitted from proceeds of more recent collections.

Even the night watchman and janitor should be accorded all the special favors allotted to other employees. Well do I remember of a night watchman in our city who, noticing that a clerk working after nightfall had failed to throw the combination to the vault door where some excess silver was stored, and this night watchman after the exit of the clerk procured an express wagon and hauled away some \$8,000 in silver, dumping it in a lake, and defying all efforts at detection, as he carefully locked the vault door after his theft and the clerks all were ready to swear that they had not left it unthrown. He was finally caught digging up his treasure. This teaches that there is a chance even for the night watchman, and this rule should be made and adhered to that no employee should be inside of the bank after nightfall. If they cannot do the work allotted they should have help before nightfall.

The janitor in this case happened to be in the bank of which I was teller. We received a telegram from a country correspondent to ship some \$5,000 currency. I put up the package after carefully counting the bills, sealed it and laid it down, after writing the receipt in the express book to be signed by the express messenger. When he came I gave him what packages I had sealed during the afternoon, and several days after we received a letter from this particular bank asking why we had not shipped the currency as ordered. The letter was referred to me for an explanation, and I at once wrote a telegram stating that we had shipped it on a certain day and referring to the receipt book I found that the receipt for this package had not been signed. As several days had elapsed and no one had acknowledged receipt of such package, I was somewhat worried. I frankly told the officers that I could not find the package, that I remembered sealing it and remembered the express agent coming to my window. After a long search without result, late in the afternoon our janitor came around and I asked him if he had seen any packages done up in brown paper lying around, and he said no; he had seen none and had touched nothing since he had helped the general voucher clerk to put away some vouchers returned from other banks. Upon referring to some old boxes kept in the vault we found the missing package of \$5,000 among cancelled vouchers which are usually returned to banks in large manila envelopes. I am glad to state that I did not lose my position, but learned a valuable lesson. I evidently laid the package down on another desk in a moment of carelessness and forgot it. Such experiences show that even the janitor has a chance to defraud if he be not honest.

Any irregularities should be at once reported to an officer and all exceptions to statements or accounts should be first submitted to an officer and then rectified by a different clerk from the original entry man. This will be a safeguard and will enable an officer of the bank to have a fair idea of the correctness and carefulness of certain clerks.

In conclusion, I would suggest that all bank employees be selected from among the best of families and their records carefully looked into.

A good education is not only an important consideration for bank officials and employees to possess when qualifications are considered, but should be made a positive essential. It is true we know of many bankers, and successful ones, too, who can hardly read and write, yet because they have been successful is no reason why others would. Perhaps had these same men been well educated earlier in life they would have been ten times more successful.

Banks should use the latest and most improved methods of bookkeeping, and

such systems of accurate checking and rechecking of the various departments as may arise in this age of progressive banking. Also the best of safes, with good time-locking devices, and other safety appliances such as practical usage has been found to render them an effective aid in the protection of the bank from the evil-minded on the inside as well as from the outsider.

Officers of banks should command the respect of their employees at all times, and at the same time not make the employees feel that you are too far above them to speak a kind word now and then. Many of us would not know the names of half of our boys were we to read their names in the morning paper, nor would we recognize them on the street owing to our unfamiliarity with them in their business positions, although directly at our beck and command. Let us treat our employees as men, appreciate their honest, industrious efforts to help us get rich; pay them what they are worth, counsel with them, make them feel that they are a part and an important part of the great institution for which they labor, and appeal to them by our acts and words of kindness in a manner that will make them appreciate their position fully, or as nearly so as possible, and "Let justice ever be tempered with mercy."

INDIAN.

MOVEMENT OF INTERNATIONAL SECURITIES.—Years ago Leon Say, the French economist, directed attention to a hitherto neglected factor in international trade—the movement of international securities—stocks, bills and instruments of exchange. In a letter to M. Courtois, the Secretary of the Political Economy Society of France, which made a great impression at the time, he wrote:

"It is proved to-day that exclusive attention to the movements of the customs may furnish the most erroneous ideas of the adjustment of the great affairs of the world. What plays the greatest role in international 'compensations' are, *first of all, securities—joint stock or national—of which the movement is incessant, and which constitute the majority of articles of import and export of all countries, rich or poor.* The complexity of these transactions is, moreover, considerably increased by exchange operations which always accompany them."

Another French Economist, M. Alfred Neymarck, has endeavored to express in figures the great predominance of security values over trade values. He said: "Between 1789 and 1889 the total value of movable securities (*valeurs mobilières*) possessed by Frenchmen in France rose from 300 million francs to 80 milliards, while general trade increased only from 1 milliard to 9 milliards." In the former case the rate of increase was 0.4 per cent., and in the latter 800 per cent.

No one has ever attempted a comparative estimate of the commercial and financial exchanges of the United Kingdom on the same basis as the one M. Neymarck made for those of France. But it requires very little consideration to show that the preponderance of securities over commodities must in our case also be very great. What the volume of the security movement may be, and whether it is growing or otherwise, the international financiers themselves may have very vague notions. It is certainly beyond the power of any theoretical statistician, however skilful and industrious, to collect sufficient data on the subject to be worth tabulating, let alone philosophising upon. The one positive fact within our reach is the preponderance of the security movement over the commodity movement. If the greater includes the less it is not international trade that includes international finance, but international finance that includes international trade. *Ergo*, to treat our exports and imports as the main items in our current account with foreign countries is to measure the dog's tail without being able to measure the dog itself.

International exchange in its widest sense has three constituents—securities, commodities and the precious metals—here stated in the order of their importance. Very probably the securities moved exceed the commodities in value by as much as the commodities exceed the precious metals.—*W. R. Lawson in London "Bankers' Magazine."*

THE CANADIAN BANK-NOTE CIRCULATION.

HOW EXTRA ISSUES ARE REMOVED.

Before lessons from the history of Canada's bank-note circulation can be profitably applied to the present American currency situation it is necessary that the different peculiarities of the Canadian system should be clearly understood; particularly is it desirable that a careful inspection be made of that part of the machinery which begins, automatically, to remove fresh notes from circulation and to press them relentlessly back upon the issuers at the very moment a sufficient supply of currency has been created. This section forms an interesting study, and in its results it is one of the most important of all.

It should be remembered at the beginning that bank notes constitute almost the whole currency of Canada. There are no silver certificates, no gold certificates, no silver dollars, very little gold, and apart from ones and twos, scarcely any Government notes among the regularly authorized currency in the hands of the Canadian public.

The Dominion Government note circulation, as reported on August 31, 1903, amounted to \$39,880,065; of this the banks held \$29,289,503, leaving \$10,590,562 in public circulation. The bank-note circulation on the same date stood at \$60,414,740; deducting \$4,227,384, the amount of "other bank notes" held by the banks (mostly for the next day's clearing), we get \$56,187,356 as the net amount outstanding.

The nature of the functions performed by the Dominion Government notes is revealed in the following specification of the denominations:

Fractionals, \$1 and \$2.....	\$12,302,976
\$4, \$5, \$10, \$20, \$50 and \$100.....	662,089
\$500, \$1,000 and \$5,000.....	26,885,000
Total.....	\$39,880,065

The bank holdings of \$29,289,503 represent probably the whole of the issue of large notes along with a couple of millions in the ones and twos required in the tills of branch banks for small change.

Although there has been in the last year an expansion of \$7,000,000, or over twenty per cent., in the Dominion Government note circulation compared with an expansion in the bank circulation of \$5,400,000, or about eleven per cent., the greater increase in the former has not come about in response to an increased public demand for currency; it has been due altogether to the action of the banks in augmenting their cash reserves, as the next statement indicates:

	August 31, 1902.	August 31, 1903.
\$1 and \$2 Dominion notes outstanding.....	\$11,017,504	\$11,960,069
\$500, \$1,000 \$5,000 " ".....	20,758,000	26,785,000
Dominion notes held by banks.....	23,045,085	29,289,503

INCREASE IN BANK-NOTE CIRCULATION AT THE CROP-MOVING SEASON.

Last year the demand for extra currency to move the crops was reflected in the bank position by an increase in the bank-note circulation between July 31 and October 31 of \$13,858,908. By the end of January nearly eighty per cent. of this increase was withdrawn and redeemed.

Canadian Bank-Note Circulation 1902.

July 31.....	\$52,070,065	November 30.....	\$84,497,641
August 31.....	55,085,701	December 31.....	60,574,144
September 30.....	60,965,801	January 31, 1903.....	55,040,987
October 31.....	65,923,973		

A detailed description of the mechanism by which this expansion and contraction are brought about, and of the manner in which the energetic self-interested efforts of the banks are enlisted for the work of cleaning up and clearing away this extra supply of currency at once when its work is done, will be submitted a little further on.

SAFETY OF THE BANK NOTES.

The note issuing privileges possessed by the Canadian banks are extensive and valuable. With one exception * every chartered bank in the Dominion is allowed to circulate its notes up to an amount not exceeding its unimpaired paid-up capital. In return these notes must be endowed with three qualifications: they must be made absolutely safe so that involuntary holders may not suffer loss; they must be at all times payable on demand and convertible at the will of any holder into gold or legal tender; and they must pass current without discount in every section of Canada.

The safety of the notes is secured as follows: by making them a first lien on all the property of the respective issuing banks, and by the combined guarantee of all the banks in the Dominion. The stipulation that the notes of a failed bank shall bear interest at six per cent. from the date of suspension until the liquidator or Receiver announces his readiness to redeem them, prevents depreciation in the case of failure or suspension. Convertibility and exchangeability at par are effected by means of the widespread system of branches and by the employment of redemption agencies.

THE PROCESS OF EXPANSION AND CONTRACTION.

These conditions satisfactorily fulfilled, the banks are left to enjoy their note-issuing privileges free from tax or oppression. As the business is profitable they endeavor to keep outstanding every dollar they possibly can. When they have reason to apprehend a sustained demand for currency exceeding their powers of supply, they do not hesitate to increase their capitals in order to extend those powers. In a sense, therefore, it may be said while the present regulations continue in force, and while there is in Canada capital available to take up the fresh issues of bank stock, that the true limit to the bank note circulation is the currency requirement of the country. With these circumstances kept in mind it is easy to perceive how the bank-note circulation commences to expand just as soon as the commerce of the country and the productive energy of the people enter into that especial activity which always characterizes the fall and early winter; how each one of the hundreds of branch banks becomes an agent, industriously paying out and scattering abroad the piles of promissory notes until then lying like so much waste paper in the vaults of the reserve city and head office banks.

But it is not quite so apparent to the casual observer how, under a different set of circumstances, when commercial activity is declining and the productive energy of the people slackening, the efforts of these self-same branch banks devoted to the self same ends bring about a directly contrary effect. To make this point clear the two processes—expansion and contraction—will be described as they take place at

* The Bank of British North America is incorporated by Royal charter; its stockholders are not liable for the debts of the bank beyond the amount paid for their shares. As all other bank stocks in Canada carry double liability for their stockholders, and as this forms an additional safeguard for the note holders and creditors, the unsecured note issue of the bank named above is restricted to seventy-five per cent. of its capital.

three different kinds of branches, viz., at branches established in small country towns where no opposition is met; at branches in towns wherein other banks also are working, and at reserve city branches.

As it represents no lock-up of capital a full supply of the bank's notes is kept at all its branches. During seasons in which the bank is not circulated to its limits these are paid out to the exclusion of all others. Bank note issues in denominations less than \$5 are prohibited. Owing to the grudging manner in which the banks at one time furnished small bills (\$1 and \$2) to their customers, a law was enacted which gives the creditor of a bank the right to demand from it \$100 in Dominion Government \$1, \$2 and \$4 notes in any payment exceeding that amount.

The machinery for the extension of a bank's circulation is not confined to its branches or its staff; its customers and friends are also expected to lend their best efforts to the work. A business concern in Canada, except in the case of its being a very large corporation, is asked to confine its borrowings and its account to one bank. When an application for a line of credit is submitted to the head office, considerable emphasis is laid on the probable effect of the business on the bank's circulation; if it can be regarded as a good circulating account that is held to be an inducement towards granting the credit.

In the late summer, just as soon as the heavier movement of farm produce begins, the little country branch begins to pay out its notes in larger volume. Cheese factories, grain buyers, live-stock dealers—all want currency, and the branch supplies their needs by paying off their deposits, by granting them loans, or by cashing their checks and sight drafts drawn on a commercial metropolis. These and other customers are asked to bring into the bank all the notes of other banks which they may receive, and to exchange them for their own bank's notes, so that it may derive the full benefit from their accounts.

The payments, then, at the small branch consist altogether of its own notes, along with a few Dominion Government ones and twos for small change; the receipts are composed chiefly of its own notes, and those of other banks, which are called "sundries." The former it immediately pays out again; the sundries it ships to the nearest point at which redemption will be made as soon as a parcel of one or two thousand dollars is accumulated. It obtains from nearby depot branches such supplies as it needs of its own notes.

At the second class of branch the process is exactly similar with the exception that the notes of the competing banks in town are exchanged daily instead of being shipped for redemption.

At the reserve cities the situation is complicated by the receipt of parcels of sundries from the outlying branches, and by the shipments in return of the bank's own notes. These sundries are sorted up and sent in for redemption as quickly as possible; the stock in hand of the bank's own notes is replenished when necessary by supplies from head office. All settlements for daily exchanges of notes and collections for a whole province or district are made at the reserve cities; at all branches outside the settlements are merely passed on by drafts.

What has been described is what takes place in theory. Eight or ten years ago, when the capitals of the banks were far in excess of the country's utmost currency requirements, this was also what took place almost universally in practice. But within the last few years the rapid commercial development of the Dominion and the rise in commodity prices have resulted in the currency requirement nearly overtaking the capitalization of the banks. The redemption operations are modified now by the fact that as each bank reaches its limit of circulation it ceases altogether to act as an agent for redemption. The smaller capitalized banks run so close to their limits all through the year that the slightest extra demand carries their note circulations as high as they dare let them go. This point once reached, they must buy the circulation of the larger banks.

The circulation is watched very closely in bank head offices. In the case of the large banks the branches send weekly reports of their holdings of the bank's own notes. Care is exercised to have the notes placed at the beginning of the fall in various strategic posts. As the quantity held by the branches gets less and less, and the bank's advances swell up through the purchase of grain drafts, etc., or its cash increases if, not being itself in the grain business, it sells its circulation to other banks who are, the amount in circulation gets bigger and bigger. Over circulation is punished by very heavy penalties ranging from a fine of \$1,000 for an excess of \$20,000, all the way up to \$100,000 for an excess of \$200,000. Consequently when the figures get reasonably close to the limits, instructions are sent to the branches to cease forwarding sundries for redemption, and pay them out instead. Just as soon as the largest banks get in this condition the machinery for redemption all over the country ceases to operate. This state of affairs continues until some of the largest banks find their receipts of currency exceeding their payments; the circulation returns from the branches disclose a falling off in the notes outstanding. This is taken as a sign that the tide has turned, and straightway the branches are ordered to resume the forwarding of sundries, and to pay over the counter the bank's own notes exclusively. This change of front speedily reduces the note circulations of the other lesser banks; they in turn join in the movement. Soon all are again employed in pressing in notes for redemption; the machinery is working at full capacity. To meet the return flow of their notes the banks have got to exchange them for a deposit liability, or to redeem in cash or set-offs. To do this they must exact payment of short-date debts bought through their note issues, or call in loans from the stock exchanges. The absolutely certain knowledge which they have that the extra note circulation will come home by January at the latest, prevents their investing in lock-ups or long winded loans.

APPLYING THE CANADIAN SYSTEM TO THE UNITED STATES.

Now, to apply this to the situation in the United States. A glance at the figures at the beginning of this paper, showing the denominations of the outstanding notes of the Dominion Government, will show something of the power possessed by banks to discriminate for or against any particular kind of currency. Let the reader note carefully the insignificant extent of the circulation attained by the Dominion Government \$4, \$5, \$10, \$20, \$50 and \$100 notes. All combined, these issues amount to less than a million. Why? Because they alone of the Government issues come into competition with bank notes. If the privilege of issuing notes against commercial assets is conferred on the banks of the United States, it must be in a form which the banks find profitable or it will not be used. Again, if it is to be made profitable to the banks they will see to it that their note issues at least remain outstanding all through the year; if notes must come into the banks it will probably be legal tenders, silver and gold certificates—the notes in fact that are eligible for reserves, and against them it would be quite possible for the banks to expand their loans. Such expansion would be the result indirectly of a sluggish redemption of the asset notes. As the banking system of the United States would not permit the granting to the banks of note-issuing powers sufficient for them to create the whole currency of the country, such as is done in Canada, and as it seems necessary to secure the proposed notes by some specific fund or other tangible security rather than by the general credit of the banks, it is quite probable that the best way out of the difficulty would be something in the nature of Secretary Shaw's latest proposal—to make the issue of asset currency by the banks profitable only when the demand for circulating medium is urgent, and to lay on the notes a tax sufficient to drive them in just as soon as the demand for them ceased or fell off.

H. M. P. ECKARDT, *Merchants' Bank of Canada.*

MONTREAL.

A NATIONAL CLEARING SYSTEM.

The country check has long been under discussion in banking circles in the larger cities. With the growing competition and the consequent narrowing of the margin of profit, various methods have been adopted to minimize the expense of handling out-of-town items. The New York Clearing-House Association has established a scale of exchange charges—a method that is being introduced into a number of cities, and which works very well until the charges become generally adopted in all cities, when the charges of the various cities offset one another and leave the situation precisely as it was before.

Perhaps the best method thus far contrived for handling country checks is that of the Boston Clearing-House Association, which has arranged to collect at par practically everywhere in New England. The only expense incurred by the New England banks in the collection of their checks on that section arises from the loss of time, while the cost of the system to the Boston banks is a mere fraction of the cost of handling foreign checks in other sections of the country.

Before entering upon the scheme indicated by the title of this article, it may be well to call attention to the method of transmitting funds between branches of the great banking systems abroad, viz., one branch may draw on another, crediting the amount to the head office under advice; while the branch drawn upon pays the draft, charging the head office. In other words, the items are handled directly between the two branches, while the accounting is done at the main office. The same method can of course be employed in the collection of checks. The saving of time is obvious.

Combining the Boston and European methods, the national clearing system which this article advocates is as follows:

1. A national clearing-house to be established at New York.
2. The associated banks there to make arrangements with as many banks throughout the country as possible to accept and remit New York funds to the national clearing-house in New York for any checks on themselves coming from any bank in the United States that is a member of the national clearing-house association.
3. The members of the national clearing-house association to send all checks directly to a member in the city on which they are drawn.
4. The banks receiving to remit for the checks upon date of receipt in New York funds to the national clearing house for the credit of the sending banks.
5. The national clearing-house association to collect the remittances through the New York Clearing-House and distribute the funds to the New York correspondents of the banks for whose credit remittances are made.
6. The New York banks to collect their own country checks precisely as the Boston banks do. Remittances would of course not all come in after two days as in Boston, but the writer thinks that the Boston system easily admits of extension to cover a wider territory with longer periods allowed for collection.

Naturally, the first question that a practical banker will ask regarding this solution of the country-check problem will be—Is it feasible? How would it work in actual operation? A few suggestions as to the possible details of operation (though other methods might work equally well) will therefore not be amiss. Suppose, for instance, that a Cleveland bank has a check for \$500 on New Orleans. The check is sent direct to the New Orleans bank on which it is drawn and the amount charged

to the national clearing-house association on the books of the Cleveland bank. The New Orleans bank would charge the check to its customer's account and remit \$500 in New York funds (the question of exchange will be considered later) to the national clearing house for credit of the Cleveland bank. This remittance might be made by means of a duplicate or "carbon copy" draft having a space on the end like the modern voucher check, in which would be placed the date of Cleveland's remittance, the amount, and the name of the Cleveland bank for whose credit the remittance was intended. At the national clearing house the draft would be separated from the carbon copy and the former collected through the New York Clearing-House. The carbon copy would be entered to the credit of the "Cleveland bank, N. Y. correspondent, — Bank." All the carbon drafts for the credit of the Cleveland bank coming into the national clearing-house on one day would be added together and credit given the New York correspondent at the New York Clearing-House (in a lump sum including the credits for all of its other correspondents determined in the same manner). This credit would be either added to or deducted from the bank's credit or debit balance at the clearing-house on that day. The carbon drafts would then be turned over to the Cleveland bank's correspondent and the total posted (itemized, if desired) to the credit of that bank, the carbon drafts being then sent to Cleveland as advices of credit. If it were desired to have a copy of these credit slips for the bank's files, the drafts could be made out in triplicate by the carbon process almost as readily as in duplicate, although in the writer's opinion the bank's record, together with that at the national clearing-house, would be ample for the detection of errors. The Cleveland bank, upon receipt of the advices mentioned, would credit the national clearing house association (which account would be practically the same as the collection ledger now in use) and debit its New York correspondent. This, of course, is merely a hint regarding the method to be pursued, not an elaborated plan. The detailed method to be pursued by the New York banks in collecting their own country checks would not differ materially from that followed in Boston now and need not therefore be outlined.

It will be noticed that nothing has been said of exchange charges. It is obvious that, taking the United States as a whole, as much exchange is paid somewhere as is received elsewhere; that is, the exchange charges of the nation cancel each other, and the average bank (average is used deliberately) neither gains nor loses through its exchange account. It is believed, therefore, that in view of other advantages of a national clearing system, exchange charges throughout the country could be abolished. The enormous amount of clerical labor that would be thus saved, not to mention the time of officers spent in making collection arrangements, etc., requires no comment.

The main advantages of the system, however, is the saving of time in the handling of country checks. If the bulk of the banks of the country could be induced to enter the national clearing-house association (or if even one bank at each point were obtained) practically every country check would be sent direct, whereas checks now frequently wander for a week or more before reaching their destinations. It is the usual thing in New York to be asked for a duplicate from three to six weeks after the original has left the bank.

But that is not all. Even when a check is sent direct under the present system, the plan advocated would be more rapid. Take the Cleveland instance again. Suppose the Cleveland bank sends to its New Orleans correspondent direct and receives a New York draft by return mail. The draft must first go to Cleveland and pass through the books of the Cleveland bank before being forwarded to New York for collection, thus taking at least a day longer than the system proposed. This under the most favorable circumstances. Take an instance not so favorable. Suppose a Syracuse bank has an item on Lancaster, Ohio. A not unusual course for the check

to take would be first to New York, then to Cleveland, then to Cincinnati, then to Columbus, and finally to Lancaster, losing a day at each place and requiring the clerical labor necessary to pass it through the books of five banks, and the credit through the same books on its return to Syracuse. Under a national clearing system, Syracuse would send direct to Lancaster and receive credit in New York, as above outlined. The former method takes about nine days, while the latter would take perhaps four or five at most. Nor is this an extreme instance. An estimate of the time and labor saved in the entire United States in a year would be interesting.

It may be objected that the country banks would not accept such a system on account of the large amount of New York exchange which they would be compelled to carry. But would the new plan require so much more New York exchange for its operation than the present method, in which accounts between banks are largely settled in New York exchange? In individual cases, where it required more New York exchange, it would require less exchange on other cities.

Again, it may be said that the country banks would object to having their checks returned to them direct for payment instead of by the present roundabout methods which give them the use of their depositors' money for a week or ten days after it has been checked against. The answer is obvious. What the average bank loses by paying its customers' checks sooner, it gains by collecting its out-of-town checks sooner, and the national benefit is that there are less "uncollected checks" everywhere.

If space permitted, it might be shown how a national clearing system, such as is here outlined, could be further developed by the lumping of each city's business at its local clearing house, thus effecting an enormous saving of postage annually for the whole country. And it might be further shown how readily this system would lend itself to the issue of bankers' money orders by any bank in the United States payable at any other bank in the United States, the credits and debits being arranged through the national clearing-house on advice of the banks. But the writer trusts that enough has been said to bring the subject to the attention of the thoughtful and progressive portion of the banking fraternity.

OSCAR NEWFANG.

THE SILVER STANDARD IN MEXICO.—In the November number of the "Yale Review," Morrill W. Gaines discussed the effects of the silver standard in Mexico. Regarding the condition of the unskilled laborer, he says: "There is nothing fundamental which compels poverty. Yet the wage of the laborer in the main inhabited portion of the country, which wage serves as base for the wages of the cities also in the case of unskilled workmen, generally runs from twenty five to fifty cents silver a day, or the equivalent of about ten to twenty cents gold. Semi starvation is widely prevalent, more especially when the rains fail and the local crops are below standard. The food is always insufficient to sustain a high degree of vitality; the dwellings are mere huts or hovels; the clothing, cotton rags. The pittance of toil barely supports existence, and by long inurement to the idea that nothing more is required of labor, the peon has given up all attempt to rise by his work, saves no money if he has it to save, and makes no effort to better his efficiency or the conditions of his life.

The silver standard has had its full share in grinding the working man down into the mire and in prolonging the gloomy state of the masses. Its action has been partly direct through the slow enhancement of the cost of living, but mainly indirect because of its influence on capital. It has prevented the full expansion and diversion of the demand for labor that would naturally have been expected to follow from the building of the railroads."

CANADIAN BANKING, COMMERCE AND MANUFACTURES—A QUARTERLY REVIEW.

PROGRESS IN INDUSTRIAL AND COMMERCIAL CIRCLES.

The ordinary statistics dealing with customs and inland revenue, imports and exports, railway earnings, bank clearings and saving deposits, give evidence of the progress and prosperity in industrial and commercial circles in Canada. With continued heavy yields of agricultural produce, greater development of manufacturing and transportation enterprises and rapid growth of export trade, the resources of the country have increased mightily, giving satisfaction with present conditions and a hopeful outlook for the future. The population is increasing at an unprecedented rate, the arrivals for the nine months of the present calendar year, ending October 1, numbering 108,084, or 39,182 in excess of the total for the same period of last year. The commercial insolvencies also make a more favorable exhibit than in the corresponding months of 1902, and show the strength and solidity of the foundation upon which Canada's commercial structure is based.

REVENUES AND EXPENDITURES.

The financial statement of the Dominion shows a total revenue for the three months ending September 30, of \$17,838,104, and an expenditure of but \$4 691,305. For the same period last year the revenue was \$15,187,367 and the expenditure \$7,976,998. The revenue has grown very steadily, the receipts for the past three months being \$3,645,737 in excess of the first quarter of the previous fiscal year. The following is a comparative statement of the receipts for the three months :

	1902.	1903.
Customs.....	\$9,099,085	\$11,020,085
Excise.....	2,834,455	3,181,724
Post office.....	890,000	1,000,000
Public works.....	1,750,746	2,032,246
Miscellaneous.....	613,070	649,098
Totals	\$15,187,356	\$17,833,104

AGRICULTURAL DEVELOPMENT.

The agricultural industry of Canada, both as regards actual production and the commercial value of the products, is in a very prosperous condition. The most satisfactory consideration is the abundance of the harvest, not only of grain, but also of other varieties of field produce.

It is estimated that the wheat crop of Manitoba and the Territories this year will be between sixty and sixty-five million bushels. Although the total wheat yield in the Canadian west will fall short of last year, the prospects are that, owing to increased prices, this year's crop will net the producer considerably more than that of 1902. At present prices it will realize about \$42,000,000, compared with \$36,850,000 last year.

The total value of the yield of oats is \$8,500,000, compared with \$13,950,000 last year.

The total value of the barley yield is \$3,815,000, compared with \$3,750,000 last year.

The total value of the flax yield is \$600,000, compared with \$375,000 last year.

The grand total value of the four crops is thus estimated to be \$57,020,000, compared with \$54,925,000 last year.

The growing importance of the trade in apples is attracting attention in connection with the export trade of the Dominion. Up to the close of September the total shipment from Montreal and Atlantic ports so far this season aggregate over 800,000 barrels, or nearly double the quantity shipped during the same time last season.

CANADIAN FOREIGN TRADE.

Canada's foreign trade has started magnificently on its career of expansion for the fiscal year 1903-4. The aggregate value for the quarter ending September 30 reached a total of \$133,758,124, which was \$21,506,588 more than for the same period of last year. The total imports for consumption were \$66,895,837, and the exports of domestic produce were \$61,479,884, as against \$51,505,768 of imports and \$57,493,585 of exports in the same period last year. The dutiable goods imported totaled \$39,579,910, an increase of \$6,409,382. The imports of free goods reached \$24,940,898, a gain of \$7,226,986. Exports of agricultural products show an increase of \$2,517,499, and mineral products an increase of \$1,692,793. There was a falling off of \$1,393,770 in exports of forest products, while animals and their produce reveal an improvement of \$760,397, and manufactures of \$535,168. The following is a comparative statement of the exports for the three months:

<i>Domestic Exports.</i>	<i>1902.</i>	<i>1903.</i>
The mines.....	\$9,882,576	\$11,515,389
The fisheries.....	2,502,940	2,403,815
The forest.....	14,106,067	12,712,297
Animals and their produce.....	21,063,541	21,823,938
Agriculture.....	5,631,252	8,148,951
Manufactures.....	4,332,148	4,867,316
Miscellaneous.....	34,861	8,178
Totals.....	\$57,493,585	\$61,479,884

FISHING INDUSTRY.

The past season has been a poor one for the fishing industry in Canada.

the total pack of salmon on the Fraser River during the season just closed is 197,798 cases, as against 327,095 cases last year. No fair estimate of the pack on the northern provincial coast has yet been received from the north.

TRANSPORTATION INTERESTS.

The transportation interests in Canada were never so keenly on the alert for the extension and improvement of their various systems as at the present time. The construction of the new Transcontinental Railway will involve for the next five years an unprecedented distribution of money for wages and material. Besides considerable new work, the existing lines are engaged in greatly improving their road beds and other facilities.

The freight handled by the Canadian Pacific Railway and Grand Trunk Railway is enormous, and both roads are taxed to their utmost capacity to find cars for the extraordinary large volume of freight that is pressing for shipment at the different points.

The gross earnings of the railways in Canada for August were \$4,076,154, a gain of \$521,970, or 14.7 per cent. over the same month of last year.

THE MANUFACTURING INDUSTRIES.

Unusual activity has marked the progress of the manufactures of Canada during the past few months.

During the month of September the great Dominion Exhibition was held at Toronto, at which were displayed products of Canadian factories from ocean to ocean.

The display of products there shown was a revelation to the many thousands of Canadians who were present, few of whom had ever before realized the extent to which the Canadian market was being supplied by Canadian factories.

Following this there was the great meeting of the Canadian Manufacturers' Association in Toronto. This was an organization of some 1,300 of the largest manufacturers in the Dominion, who have this active, strong organization for safeguarding their interests in matters legislative and fiscal, and also in the great questions that affect them in the field of transportation, and in the labor problem as well. The note that was sounded at this meeting by the various speakers, as they discussed different questions, showed that the industrial interests were rapidly expanding, and were now obtaining a strong foothold throughout the Dominion.

Following this there was a large special excursion of the manufacturers of Eastern Canada through Manitoba, the Northwest and British Columbia. While largely a pleasure trip, the object was a business one, and the effect has been to kindle feelings of warmer attachment between Eastern and Western Canada. The effect of this will lead largely to encourage the manufacturers of Canada to further extend the Western Canadian market, and will also give them, in the lines of the western consumers, a preference over the goods that have been previously imported from other countries.

Strikes are not now interfering with the output in manufacturing centers, but the scarcity of skilled labor is a serious factor in this connection, and to that is attributed the inability of the manufacturers in many lines to keep the supply equal to the demand.

Many industrial corporations have been promoted in Canada during the past three months, and several increases have been made in the capital of other incorporated companies, but in almost every case the expansion of the business that has followed such action, and the larger earnings that have accrued, have fully justified the wisdom of such increases in capitalization as have been made.

MINERAL DEVELOPMENT.

The present year promises to surpass the record of 1902 in the aggregate mineral production. The total output of metallic and non-metallic minerals for 1902 was valued at over \$70,000,000 as compared with \$69,209,305 during the previous year. Nova Scotia leads in the record of the Provinces, with an output of \$19,501,130, and British Columbia is second, with \$17,486,550. Ontario holds third place, with \$13,577,440, a gain of over \$2,000,000 compared with the previous year, and the output of the Yukon, \$12,600,000, is fourth in the record of Provinces and Territories. Quebec produced to the value of \$4,000,000; Alberta, Manitoba, and the other Territories \$2,515,953, and New Brunswick about \$1,000,000.

The year was one of exceptional activity in the production of coal and coke, iron and steel, nickel, copper, and asbestos. The total production of coal for the year was 6,550,528 tons, of which 4,725,480 tons were mined in Nova Scotia, while British Columbia contributed over a million and a quarter tons. Over two million tons of bituminous coal were exported.

THE LUMBERING INDUSTRY.

The lumber industry is in a prosperous condition at the present time. The exportations of sawed lumber from Canada to the United States during the year, which ended with June 30 last, amounted to 719,135,000 feet, valued at \$10,596,066, or at the rate of \$14.91 a thousand. The lumber consists mainly of pine and spruce.

BANKS AND BANKING.

The statements of the Canadian chartered banks for the past quarter show continued growth in the business of the Dominion. Presented below in a condensed form are the statements for July, August and September 1903.

LIABILITIES.	July, 1905.	August, 1905.	September, 1905.
Capital authorized.....	\$96,326,666	\$97,046,666	\$97,046,666
Capital paid-up.....	77,068,666	77,617,886	78,067,190
Reserve funds.....	48,122,212	48,289,780	48,897,498
Notes in circulation.....	\$57,563,665	\$60,414,740	\$63,741,270
Dominion and provincial Government deposits.....	\$6,794,542	\$6,122,116	\$7,886,296
Public deposits on demand in Canada..	110,542,900	111,735,920	116,701,497
Public deposits at notice.....	271,597,201	273,770,645	275,081,027
Deposits outside of Canada.....	86,349,191	34,709,511	35,291,668
Bank loans or deposits from other banks, secured.....	579,948	474,534	515,428
Due to other banks in Canada.....	4,198,658	4,591,695	4,553,238
Due to other banks in Great Britain...	5,370,959	5,887,935	3,863,586
Due to other banks in foreign countries.....	1,561,076	1,386,568	1,423,813
Other liabilities.....	10,821,812	10,960,702	10,732,913
Total liabilities.....	\$505,280,024	\$510,054,432	\$518,800,806
ASSETS.			
Specie.....	\$14,073,865	\$14,332,456	\$14,717,111
Dominion notes.....	29,742,431	29,239,503	30,330,480
Deposits to secure note circulation..	3,130,344	3,130,844	3,180,844
Notes and checks on other banks.....	16,411,627	16,996,887	18,069,250
Loans to other banks, secured.....	589,972	474,534	515,428
Deposits with other banks in Canada..	5,084,725	5,321,181	5,727,682
Due from banks in Great Britain.....	3,711,374	3,818,961	5,966,332
Due from other banks in foreign countries.....	17,197,943	16,414,017	18,240,336
Dominion or provincial Government debentures or stock.....	11,840,264	11,498,222	11,142,682
Other securities.....	52,147,092	51,914,053	52,562,189
Call loans on bonds and stocks in Canada.....	41,881,085	41,424,670	41,650,056
Call loans elsewhere.....	36,382,605	38,942,855	36,538,040
Current loans in Canada.....	363,586,174	368,641,999	373,633,072
Current loans elsewhere.....	22,226,350	22,450,523	24,118,210
Loans to Dominion and Provincial Governments.....	1,286,312	1,235,950	1,471,990
Overdue debts.....	2,199,555	2,163,506	2,042,238
Real estate.....	835,697	836,722	787,154
Mortgages on real estate sold.....	724,969	725,372	717,954
Bank premises.....	8,420,051	8,438,438	8,625,443
Other assets.....	10,532,557	8,663,097	6,747,406
Total assets.....	\$641,985,639	\$646,640,916	\$656,704,532
Average amount of specie held during the month.....	\$14,257,291	\$14,106,127	\$14,449,361
Average Dominion notes held during the month.....	29,087,961	29,016,004	29,284,108
Greatest amount notes in circulation during month.....	60,640,008	61,600,333	65,069,739
Loans to directors or their firms.....	11,209,805	10,980,294	11,578,494

The statement of the condition of the banks in Canada on August 31 reflects the expansion in note circulation generally looked for at this season. There was an increase of nearly \$3,000,000 during the month, and the total of \$60,414,000 compared with \$55,035,000 a year ago, or over \$5,000,000 in excess of that time. Call loans in Canada show a slight contraction for the month, but they are \$3,640,000 less than a year ago, when speculation on the stock exchange was rampant. This class of loans made by Canadian banks outside of Canada increased over \$2,500,000 in August, but they are \$18,500,000 less than a year ago. Business discounts in Can-

ada increased over \$5,000,000 per month, and they are nearly \$72,000,000 more than a year ago, while discounts of Canadian banks outside of Canada are now \$7,700,000 less than on August 31, 1902. Deposits of the banks now aggregate \$420,216,000, as compared with \$390,176,000 a year ago, an increase of \$30,040,000.

The report for September shows continued growth in the business of the Dominion. In the item of deposits by the public, the figures show another increase of upwards of six millions for September over August, and nearly \$32,000,000 a year ago. The call loan item shows a little change from the previous month, apart from the fact that there was a further contraction in the loans outside of Canada to the extent of two millions and a quarter. The Canadian account in call loans remains about steady at \$41,650,000, which is, however, over \$10,000,000 less than it was a year ago. In the matter of current loans in Canada, it is evident the banks have had to meet an increasing demand on the part of merchants, manufacturers and others, as there has been an increase of some five millions in that item, bringing the total up to \$373,633,000, compared with \$368,641,000 in August, and \$303,518,000 a year ago. There has also been an expansion of current loans outside of Canada, the total having been increased to \$24,118,000, compared with \$22,450,000 in August. There has, however, been considerable contraction in the item within a year, as the loans elsewhere than in Canada a year ago were \$35,872,000. Circulation increased by \$3,000,000, and is now \$63,741,270, or approximately \$3,000,000 in excess of the corresponding month a year ago. Dominion notes outstanding aggregate \$30,000,000, or \$7,000,000 more than a year ago. The paid-up capital of the banks now exceeds \$78,000,000, so there is still a large margin for expansion in circulation. The authorized capital of the banks is rapidly nearing the \$100,000,000 mark.

The chief items in the report, with comparative figures, follow :

ASSETS.	Sept. 30, 1903.	Aug. 31, 1903.	Sept. 30, 1902.	Sept. 30, 1901.
Specie.....	\$14,717,111	\$14,232,456	\$12,501,727	\$11,806,127
Dominion notes.....	30,330,480	29,289,503	23,145,990	20,002,475
Balance due from United Kingdom....	5,936,832	3,818,961	6,344,566	5,330,785
Balance due elsewhere.....	18,240,886	16,414,017	15,299,173	17,778,306

An interesting feature of the bank statement for September is the call loan account of each bank. It will be seen in the following list that the Dominion Bank

still ranks as the biggest lender of call money in Canada, while the Montreal has little or no competition in the matter of loans outside of Canada. The list is as follows :

	<i>In Canada.</i>	<i>Outside Canada.</i>
Montreal.....		\$20,509,600
Dominion.....	\$5,489,842	
Merchants.....	3,715,518	3,009,700
Imperial.....	3,217,999	
Commerce.....	3,089,965	5,005,319
Nova Scotia.....	2,486,924	2,844,203
British North America.....	2,397,905	3,557,187
Hamilton.....	2,356,465	
Traders.....	1,906,286	
Molson.....	1,896,009	
Quebec.....	1,714,046	
Royal.....	1,785,369	
Sovereign.....	1,679,441	

Canadian bank clearings for the dates named at three of the leading cities, with comparisons were :

	<i>Oct. 22, 1903.</i>	<i>Oct. 15, 1903.</i>	<i>Oct. 23, 1902.</i>
Montreal.....	\$25,521,493	\$20,427,107	\$25,092,690
Toronto.....	17,747,859	12,749,054	19,092,978
Winnipeg.....	6,680,702		5,396,967

The following statistics show how the resources and loans of the Canadian chartered banks have changed since 1897 :

BANK ITEMS.	1903.	1897.	Increase since 1897.
Capital paid-up.....	\$76,680,301	\$62,285,200	\$14,375,100
Reserve fund.....	47,973,800	27,224,000	20,749,800
Circulation.....	58,865,800	41,580,000	17,285,900
Deposits.....	415,173,100	215,366,200	199,806,900
Loans and discounts.....	385,273,300	208,485,600	176,787,700
Call loans in Canada.....	40,876,900	18,308,700	22,568,200
Call loans out of Canada.....	39,500,700		39,500,700
Total loans.....	465,659,900	226,794,300	228,865,600
Total assets.....	641,985,300	356,539,400	285,445,900

The resources of the banks in capital in circulation and deposits in 1897 were..... \$293,419,100

The resources of the banks in 1903 were..... 546,553,690

Enlargement of resources in six years..... \$353,074,500

Percentage of enlargement..... 86.2 p. c.

Proportion of total loans to total assets, 1897..... 148 p. c.

Proportion of total loans to total assets, 1903..... 183 p. c.

The total loans and discounts of the banks in 1897 were..... \$226,006,900

The total loans and discounts in 1903 were..... 469,797,300

Enlargement of loans in six years..... \$241,790,400

Percentage of enlargement..... 170 p. c.

The growth of deposits in the last few years has been remarkable, the extent of them is shown by following statistics :

	1902.	1901.	1896.
Deposits in chartered banks.....	\$344,949,900	\$315,775,400	\$183,769,900
Deposits in P. O. banks.....	42,320,200	39,950,800	28,932,900
Deposits in other Government banks..	16,117,700	16,096,100	17,896,400
Deposits in Savings banks.....	20,360,800	19,125,100	14,459,800
Deposits in loan companies.....	21,088,700	20,756,900	19,404,800
Totals.....	\$444,817,300	\$411,706,300	\$264,453,800
Increase since 1896.....	180,363,500		

AMERICAN INSTITUTE OF BANK CLERKS.

AN INTERESTING JOINT DEBATE ON COUNTRY CHECKS.

The first annual convention of the American Institute of Bank Clerks was held at Cleveland, Ohio, September 18 and 19. Owing to the very large amount of space occupied by the proceedings of the convention of the American Bankers' Association in last month's *MAGAZINE*, it was impracticable to print the proceedings of the bank clerks' convention.

At the first day's session of the convention of the American Institute of Bank Clerks at the Hotel Hollenden, Cleveland, September 18, Clay Herrick, chairman of Cleveland Chapter, was chosen temporary chairman, and S. Ludlow, Jr., of New York Chapter, was elected temporary secretary. On the last day the following permanent officers were chosen: Chairman, F. I. Kent, of Chicago; vice-president for the Middle West, R. M. Richter, of St. Louis; vice-president from the Far West, J. W. McDermott, of San Francisco; vice-president from the East, S. Ludlow, Jr., of New York; secretary, Clay Herrick, of Cleveland; treasurer, Charles W. Dupuis, Cincinnati.

Addresses were made by a number of delegates and others, and on the evening of Friday, September 18, an interesting debate was held on the following subject: "*Resolved*, That the collection of country checks at par is contrary to general business principles." A complete report of this debate is presented below.

Meeting called to order by Chairman Richter.

MR. RICHTER'S OPENING ADDRESS.

CHAIRMAN RICHTER: Ladies and Gentlemen—In calling to order this assembly and opening this debate this evening I cannot help but refer to the successes which have accompanied former occasions of a similar character.

This is the fourth great inter-city debate arranged by the institute, and from present indications will excel in every point those which have gone before. The three previous inter-city debates were held in Cleveland, Pittsburg and Cincinnati. I think I can safely say that this convention assembled here to day is the direct result of the Cincinnati debate. It was there that the spirit which brought this about asserted itself in such a manner that no further delay was permitted. I might refer here also to the fraternal feature of a debate of this kind. In the past we have found that even the vanquished enjoyed the occasion, though they had to leave the laurels with somebody else. And I trust this spirit will be evident this evening as before.

In charge of the proceedings this evening is one of our most active chapter chairmen, whose experience in the same direction before makes him about the most available man to conduct this affair.

The success of the Cincinnati debate was such that the chairmanship of this inter-city debate was placed in the hands of Mr. Dupuis. I surrender the floor to him.

Whereupon Mr. Dupuis took the chair.

MR. DUPUIS' ADDRESS.

MR. DUPUIS: Ladies and Gentlemen—I, too, believe that this convention is the direct consequence of the Cincinnati debate. But that is probably true because so many chapter chairmen came to that affair. Whether all that Mr. Richter, of St. Louis, said in regard to whom the credit belongs is true or not makes little difference. He said something though about the vanquished enjoying the affair in spite of the fact that they had lost. I recall that one of the debaters who lost in Cincinnati left that night, I believe, between ten and twelve o'clock. I don't know whether it was because he enjoyed it or not. And another left before six o'clock

in the morning, and left Mr. St. Jean, of St. Louis, to stand all the consequences. I think Mr. St. Jean ought to see to it that these men make the necessary apologies for running away and leaving him all alone. But I will say for the men who left, their end of it was very well taken care of by Mr. St. Jean.

Before we enter into this debate I would like to state a few plain words. Each debater will be allowed twelve minutes. The affirmative side will open the argument; each side will be allowed ten minutes additional in rebuttal. The affirmative side will have the last say, since the burden of proof rests upon them. No new argument shall be presented in the rebuttal.

The debaters are to be Mr. John Gillett, of Detroit; Mr. F. B. Gilmore, of Washington, and Mr. A. H. Jones, of Philadelphia, for the affirmative; and Mr. Harry Evers, of Buffalo; Mr. A. V. Gardiner, of Minneapolis, and Mr. J. L. Guild, of Providence, for the negative.

I take great pleasure in stating that we have obtained three distinguished gentlemen, whose ability to pass upon this debate must be unquestioned. They are Mr. H. Clark Ford, President of the Garfield Savings Bank, of this city; Prof. Edwin F. Moulton, Superintendent of Public Schools, of this city, and Mr. Thomas B. Paton, editor of the "Banking Law Journal," of New York. Mr. Paton is to serve in the place of Hon. Carlos N. Stone, who could not come.

The debate committee is under obligations to Cleveland Chapter for obtaining these gentlemen to serve in this capacity, and I wish to thank Mr. Paton especially at this time for serving on so short a notice. I want to say that Mr. Wills will act as official timekeeper, assisted by Mr. Richter; that each debater will be notified by a tap on the table when eleven minutes are up, notifying him that he has still one more minute to occupy.

I thank you, gentlemen.

We will open the debate with F. B. Gilmore, of Washington, for the affirmative.

MR. GILMORE, FOR THE AFFIRMATIVE.

MR. GILMORE: Mr. President, Honorable Judges, Ladies and Gentlemen—The question we are to consider reads: "Resolved, That the collection of country checks at par is contrary to general business principles." This leads to the consideration of what are business principles.

The trend of business to-day is toward concentration, one object of which, if not the principal is to save expense. Banking business is based upon two principles, security and profit. Banks are not the old staid institutions of the past: they are progressive and keep at the head of the business procession. Instead of the ledger that weighed fifty pounds, they use smaller ones, requiring less time to handle. Blotting paper has supplanted the sand-shaker, the gold pen instead of the quill, that required so much time to mend to keep in working order. The adding and computing machines save hours of labor. Why all this? Saving of time. Never truer than the present, time is money. It is also true, security is money. And collecting country checks at par is contrary to general business principles.

Some people, when they deposit a number of checks, are under the impression that they have deposited so much cash. This is erroneous. Banks cannot count checks as a part of their reserve, neither can the paying teller use them to pay the checks presented to him. These checks are sent to the paying bank by a circuitous route to save expense of collecting to the transmitting bank, thereby entailing an extra loss of time. Suppose in transit they are lost or destroyed in a wreck, as they sometimes are. Is that loss of time a profit to the sending bank? Then the time, trouble and expense in getting duplicates of them is an additional loss. For example, a check of \$125 was deposited in a city bank, drawn on a country bank, and same check was destroyed in a wreck. When the depositor was informed of the fact, after numerous communications requiring several weeks' time, he replied that the party who gave the check could not give him a duplicate until three months later. This loss of interest and expense which the trouble entailed, all well regulated institutions will try to guard against, and have some system or method for protecting themselves by charging for collecting out-of-town checks.

How often are checks returned unpaid and protested because of insufficient funds to meet them, and the sending bank is compelled to pay the fees, thus requiring an outlay of cash and involving an additional loss. Is this good business principles?

Our opponents will ask: Do not country banks keep a balance with the city banks? If they do, what is it worth? The fluctuating balances are unreliable and in some instances they are an expense instead of a profit.

In the experience of banking it is often found that the amount of outstanding checks exceeds the customer's balance, and giving credit for them means lending money without interest. Is this profitable business?

Heretofore we have considered the profit phase of the question. We will now take up the security. First, as to the signatures.

A legal authority, recognized and accepted in all courts, says: "The indorser of a nego-

liable instrument upon which the name of the drawer, maker, acceptor or of a prior indorser, is forged, he, by indorsing it, warrants that he has clear legal title thereto and that the instrument is the genuine article it purports to be, and he is, therefore, bound by his indorsement to all parties subsequent to him."

In the light of this statement, what guarantee or security has a bank, that any signature on the check preceding its own indorsement is genuine? Yet the bank is required to guarantee them all and is liable for each and every one.

Secondly: Duty of collecting bank and its liabilities. The afore-cited authority says: "For the purpose of collection the collecting bank must employ a suitable sub-agent. It must not transmit its checks or bills directly to the bank or party by whom payment is to be made, with the request that remittances be made therefor. It is considered that no firm, bank, corporation or individual can be deemed a suitable agent, in contemplation of law, to enforce, in behalf of another, a claim against itself. Therefore where a bank, receiving a check for collection, forwarded it to the bank upon which it was drawn, requesting payment thereof, which bank, upon receiving a check, charges it to the drawer's account, cancelled and marked it paid and remitted to the collecting bank in payment a draft, which proved to be worthless, it was held that the collecting bank was liable to the depositor, in that it had failed to employ a sub-agent for the collection of the check, who would have received the cash therefor, or, in default thereof, have protested the check and returned it to the depositor as his evidence of a right of action against the drawer.

How many country towns have more than one bank? You can see what risk the collecting bank assumes according to this authority. The authority quoted covers the question of security so fully, completely and comprehensively, anything further on the subject by me would be a work of supererogation.

Therefore, when time and space be no more, then we can collect country check at par.

THE CHAIRMAN: I take pleasure in introducing the first speaker for the negative, Mr. Harry Evers, of Buffalo, New York.

MR. EVERS, FOR THE NEGATIVE.

MR. EVERS: Mr. Chairman, Ladies and Gentlemen—We, of the negative side, assert that the acceptance of country checks at par is not contrary to general business principles; on the contrary, we believe that the general adoption of this practice would be a great gain to the business world and a development along sound economic and banking lines.

Mr. Horace White defines a bank as a "manufactory of credit and a machine for the facilitating of exchanges." These are not separate and distinct functions, but are inseparably bound together, and it must be in the best interests of bankers generally to so adjust their machinery that the credit extended may be made available at par in all parts of the United States.

The country check is a much-despised instrument, and to the thoughtful student of finance this seems strange, when the use of the check as a medium of exchange is considered—a use that amounts to about ninety per cent. of the total exchanges of the country.

In spite of the restriction placed upon it, the use of the check is becoming more general. The manufacturer and the merchant, recognizing its place in business economy, are giving the form of voucher to their checks, the largest firms either requiring certification making them payable in New York city or, as in many instances, opening accounts with New York banks, which means a loss of business to the banks in their own cities.

Under the present practice—a practice which lacks uniformity, a result of competition—the country check is subject to a charge for its collection. The question is: who really pays the charge, and is it a legitimate and permanent one?

It is generally supposed that the merchant or manufacturer, under stress of competition, stands the loss rather than run the risk of losing a customer by requiring payment in New York funds or by charging the expense of collection to the customer. But does he really do this? We all know that more often the cost of collection is charged to the customer, either directly or indirectly, by addition to the selling price. Can we estimate what this addition to prices means in a business year, what it means to a customer, and what effect it has on bank deposits? Is it not a truism that reduction of cost of production means greater demand, more business and larger bank deposits?

In the consideration of the question at issue, our thoughts turn naturally to New York city and the action of the clearing-house banks there. The mainstay of their business is undoubtedly the account of the country bank, and yet in 1899, deploring the expense imposed upon them in the collection of country checks, they united in the impossible task of shutting them out or at least making them a means of profit instead of loss. Was their action a wise one? And in their self-satisfaction, because of a present profit, are they not, in their adherence to this agreement, preparing the way for greater future loss to themselves?

We may believe that the loss entailed seemed great when, belying our wonderful system of transportation, they estimated, in addition to a cash charge of \$1, a loss of six days' interest or sixty-six cents, a total of \$1.66 per thousand on New Jersey checks; a loss of three-days' interest and a cash charge of \$2.50, a total of \$2.83 per thousand, on Vermont checks.

Admitting that this estimate was correct—and as late as 1900 the courts adjudged a New York bank negligent in taking three days to present a check on Perth Amboy, twenty-two miles distant—did New York adopt the right solution of the problem? Do they not still stand a loss of sixty-six cents per thousand on New Jersey checks and \$1.83 per thousand on Vermont checks? A few months later Boston solved this problem in a more business-like way by instituting a clearing-house for checks on New England, a territory covering an area of 82,000 square miles, of which Boston is naturally the financial center. By means of this system, checks delivered at the clearing-house are sent direct to the banks upon which they are drawn, are remitted for at par by all but sixty-two out of 700 banks, and are settled for in the city clearings on the second day following, at a cash cost to the banks of six cents or less per thousand. It is a significant fact that ninety per cent of the remittances are in drafts on Boston, not on New York, and it is pertinent to ask if Boston bankers have not shown a clearer understanding of the value of the country check as a circulating medium; a better sense of justice to the business community they serve, and a more far-sighted appreciation of their own interests in providing this means for the collection of New England checks without cost to their customers than have the bankers of New York in their action.

We often hear the assertion made that New York will in the near future wrest the supremacy of the financial world from London; that the day is surely coming when New York will become the clearing-house of the world. Are its bankers hastening that day when, instead of remaining the collecting center of even their own State, their tariff on the country check is making Albany or Philadelphia the collecting agency for checks drawn on points within a radius of a hundred miles of their own city? If it were not for the necessity which compels the country banks to keep the larger portion of their reserve there, would not the diversion of bank deposits to other cities be more keenly felt in New York? This from the standpoint of their business with other banks. We cannot estimate the effect of this charge on the volume of business of New York merchants, though we may well believe that eventually the force of public opinion will convince New York bankers that their present agreement is working harm. And when this realization comes to them, will they not then take advantage of the offer of over 400 New England banks to enter into the same arrangement with New York that they now have with Boston? Or, better still, will they not establish a clearing-house for checks on the territory that is naturally tributary to New York, thus forging the most powerful link in a chain of clearing-houses that will best serve the interests of the business community and of the banks themselves?

St. Louis took the lead in the really practical enforcement of the charge on country checks, with this difference, however, that, realizing the advantage of keeping St. Louis a collecting center, the clearing-house rules, while enforcing the charge to the individual depositor, leave it optional as to the out-of-town banks.

There the unwillingness of the depositor to stand this charge is taking definite form. Under the leadership of the Credit Men's Association, St. Louis merchants are compiling statistics to be used in the preparation of a practical protest to the local banks, and are advocating, at the same time, the establishment of a clearing-house for country checks.

Dissatisfaction of depositors with this collection charge is not confined to the cities where a clearing-house agreement can be enforced, but is making itself felt in all the larger cities. Witness the competition for business that has its basis in the charge on checks. At a meeting of the committee on clearing-houses of the bankers' association, after the last annual convention, it was not possible to get a decided expression of opinion as to the wisdom of these agreements. As a Chicago member expressed himself, his bank "never had any trouble in keeping an account that it wanted," and "did not lose money on the business it kept."

Competition that results in an effort on the part of banks to collect a charge on the one hand and evade a charge on the other, is unhealthy. Indeed, does not the present system result in a violation of moral as well as business principles? This idea may seem to be an exaggeration, but if time permitted I could quote many cases to prove that in a system under which the depositor is not given full value in the service for which he pays, and under which a bank subjects itself to a needless liability, there is neither good business nor good morals.

That we are all gathered here argues that we are interested in the details of our profession, and I need only call your attention to the many needless indorsements we are used to seeing on checks to remind you of plenty of examples from your own experience.

Let me cite here just one instance, given me by a lawyer friend of mine, where a referee in a sale at foreclosure accepted a check on a country bank not a hundred miles away, withholding the deed to the property, however. This check he deposited in a Buffalo bank, paying one-quarter of one per cent. exchange. Inquiring a few days later as to the fate of the

check, he was told that it had been sent to Philadelphia and the bank could not assure him of its having been paid. He then asked them to wire direct to the drawee bank at his expense, and three days later he was notified that a telegram—also at his expense—had been received advising payment of the check. Was this good business on the part of that bank? And let me ask you if it is not true that the customer who does not pay exchange gets just as good service as the one who does.

A check is not issued unless there is a debt to be paid and a credit provided against which it is drawn. This is the simplest of operations in theory; and you must admit, gentlemen, that it is good business to terminate the credit as quickly as possible. When this is not done there is an injustice to the depositor and a danger to the bank. Notwithstanding the discrimination against it, there is an increasing use of the country check. Why isn't it better business for bankers to recognize its true value, and instead of restricting its use, to work together for the establishment, in all the larger cities, of the machine that is now in practical and beneficent operation in Boston?

The tremendous development of the resources of this country is due to the extension of bank credit and the "facilitation of exchanges," but, in view of the agitation of the last few years, it must be admitted that the banks are not meeting successfully all the demands of business. The day the successful merchant turned banker is rapidly passing. The bank officer of the future will be more and more a man of special education and training. With the broader outlook that this necessarily implies, will there not come a wider recognition of the fact that true business develops with consideration of the "greatest good to the greatest number," and not with a reaching out for individual gain? To the thoughtful student of financial problems there lie wide possibilities for good in a freer use of bank checks and its corollary, a better system for their expeditious and economical collection.

THE CHAIRMAN: It is my privilege and pleasure to introduce Mr. John Gillett, of Detroit.

MR. GILLETT, FOR THE AFFIRMATIVE.

MR. GILLETT: Mr. Chairman, Honorable Judges, Ladies and Gentlemen—The question, "Resolved, That the collection of country checks at par is contrary to general business principles," admits of a great variation of opinion, but I maintain that it is against good business principles for the following reasons:

- 1st. The uncertain value of the checks and the remittances received for the same.
- 2d. The cost of collection and exchange.
- 3d. The expense of postage and clerical help.
- 4th. The time lost in transit of the various items.
- 5th. The cost of protest fees and other minor charges.
- 6th. The exchange received in returns being very often unsuited to the needs of the receiving banks.
- 7th. The standing and reliability of the remitting banks.
- 8th. The amount of money always in transit not being available immediately, but practically being a method of loaning money without interest.
- 9th. The inability of the bank to tell the genuineness of the checks received upon deposit.
- 10th. The indirect course that these checks very often take before arriving at the place of payment.

In going further into the first reason, it is almost impossible to tell whether the checks received from customers are genuine or whether the banks are being used for swapping or trading of checks, and also the standing of the bank upon which the check is drawn, but the teller must be guided almost entirely by the standing of the depositor; as he could not hold up the funds until he knows whether the check is paid or not; then how is the bank to know for a certainty that the check received from the remitting bank will be honored by the bank upon which it is drawn.

2d. The wide variation of collection charges made by remitting banks makes it impossible in most cases to make any settled rate that may be charged, as in a small place where there is only one or two banks the collecting agents may charge what they see fit.

3d. The expense of postage and clerk hire on these checks means a large expense that the bank is not sure of getting back, as they cannot add this amount directly to the exchange charged upon that item.

4th. The time lost in transit of these country checks means a large amount of money out without any interest, and that is loaning money to the depositor or customer without charging for the same. In a good-sized bank this means from ten to fifty thousand dollars out all the time that it is not available immediately and very often cramps the bank for ready cash and exchange.

5th. The cost of protest and other minor charges that may be made by collecting agents that the bank may have to pay and perhaps not get back.

6th. Very often the exchange received is not suited to the needs of the bank and makes a great deal of transferring to other parts of the country, sometimes at a large expense and for which the bank cannot be reimbursed.

7th. The standing and reliability of the remitting banks as the expense of territory covered by these checks is so great that it is next to impossible to keep posted as to their condition.

8th. The amount of money always in transit not being available immediately, sometimes makes it hard to keep cash and exchange as required, and so cramps the banks; when if the money was in their hands they would not be so.

9th. The inability of the banks to tell the genuineness of the checks, as very often checks are used as a trading or swapping method of which the banks have no knowledge.

10th. The indirect route these checks often travel before reaching the final paying place takes time, and very often in a case of loss the bank has to stand it, as the customer finds this out and says: "You have no right to send that check all over the country, even if it were to save exchange, but should have sent it direct."

I also maintain that it is a very uncertain method of business, for if the draft sent by the remitting bank be dishonored, it is hard to tell whether in a legal way you can hold the customer, as the check has been paid by the bank upon which it is drawn and the business between the drawer of the check and the drawee is entirely closed.

Very many banks insert a clause in their deposit books, that they receive out-of-town checks entirely at the risk of the depositor, and act only as his agent and assume no liability at all; but this is a very serious question, whether this is legal or not.

Then again, I want to ask my worthy friend on the other side of this question, if it is good sound business to take these checks at par? Why is it that the New York and Boston Clearing-Houses make such strict rules about any bank receiving such checks without charging upon them? Then again, there is another drawback; here is a customer that has a good balance with your bank and only once in a while gets a country check. Can you charge him as much as you would a customer who has a large number of them? No, you cannot; then you have to discriminate and if the other fellow hears of it, he is sore and says he has not been treated right.

There is one more point, and that is, that a large dealer can tell his customers throughout the country that he will take their checks in payment of their accounts at par as his bank does not charge him, as he does such a large business, and the small dealer, therefore, cannot compete with him; in other words, the large wholesale dealer compels his bank to take those checks at par. And it sets banks bidding against each other for accounts as one bank sometimes makes better arrangements to collect these checks than some others can.

And, in conclusion, I wish to say, that if these checks were not fully used as they are, we would find that the deposits throughout the country would be considerably less, which I maintain would be proper, as one check very often swells deposits in three or four banks.

I hope the time will come when the banks all over the country will get together and adjust this sending out of personal checks when New York or other exchange would be so much the better for all.

You will also find if you have to pay your life insurance to the head offices in New York, that they will not take your country checks at par.

Therefore, let us all try and discourage the use of country checks at par when other exchange would be so much more safe and easier to handle.

THE CHAIRMAN: I take pleasure in introducing Mr. A. V. Gardiner, of Minneapolis, for the negative.

MR. GARDINER, FOR THE NEGATIVE.

MR. GARDINER: Mr. Chairman, Ladies and Gentlemen—I take up this discussion from the standpoint of the banker. Whether or not it is contrary to general business principles for him to collect country checks for his customers at par.

The service of collection cannot be performed without some expense to the collecting agent. This expense is always there. It is composed of three variable items:

1st. Running expenses, postage and clerk hire.

2d. Interest on items in transit.

3d. The charge of the drawee bank.

There is no constant factor of expense. The drawee bank frequently makes no charge, very often the country check can be charged at once to the drawee bank on the books of the collecting agent, thus saving interest; postage may be economized by good management, and so, unfortunately, may clerk hire—but there is still a cost to the collecting bank.

The question is whether or not it is in accordance with good business principles to render this service at par, that is, by not making a direct pro rata charge on the items themselves.

At every recent gathering of bankers much has been said about the patriotism and public spirit of the American banker, and the American banker has earned a tribute of this kind in each crisis, political or financial, that this country has passed through. As the trustees of the public wealth the bankers must be and are public spirited, but in their capacity of trustees of the private wealth of their stockholders the bankers are keen, sharp, and honest men of affairs. They agree with Sis Hopkins that it is not good business to "Do nothin' for nobody what never done nothin' for you." And this, gentlemen, is the real point in the case. Is a collection at par, for which no direct fee is charged, a free collection?—or may it be made a business investment which will yield a far greater profit to the banker than the fraction of a per cent. which he can collect over his counter?

I shall make three points for the negative.

1st. A banker by giving par rates to his customers is paying for good substantial advertising. Every jobber who can collect his country checks at par is a satisfied customer and that kind of customer is the best advertisement. The banker is buying paying business for little money.

A merchant will carry his balance where it will pay him best. Those northern neighbors of ours, the Canadian bankers, who are past masters in the art of charging exchange, and don't think anything of twenty-five to fifty cents a hundred, are paying interest on daily balances of active commercial accounts and they are entitled to a liberal fee for their services. In this country it is not customary to pay interest on such accounts, yet the merchant who carries a big balance is entitled to some substantial return for doing it. It is contended that the discounts of his bills receivable and advances made to him are accommodation sufficient; but the banker who makes this statement does not hesitate to charge the highest market rate for these favors, and sometimes he gets a commission for selling such of his customer's paper as he cannot take himself. Country bank balances, of course, draw their monthly two per cent.; but they differ from the accounts of merchants in this, they are steadier, and larger in proportion to the amount of checks drawn against them. These balances are generally reserve funds which may not be depleted beyond a certain point. The wise banker who collects his correspondent's country items at par will insist upon reciprocal accommodations which will in a large measure compensate him for expenses incurred.

Take, for example, a hypothetical case. Suppose a bank in Chicago has this agreement with its correspondent in Minnesota—the Minnesota bank shall keep an average balance of two hundred thousand and collect all northwestern points at par for Chicago, and Chicago in turn agrees to collect all points in its territory at par, and, of course, pay two per cent. on the balance. Excluding commercial drafts, which have no place in this discussion, the volume of country checks that each bank collects for the other will be about equal and neither will be out anything on exchange.

The result will be an increase of deposits for Chicago at a merely nominal cost fully offset by the collection facilities offered by Minnesota. This two hundred thousand is, of course, part of the reserve of the Minnesota bank and in excess of the amount needed in Chicago for exchange purposes, and would very probably be kept in New York, were it not for the favors given in the way of collection by Chicago. Both banks really save in actual cost of their collections on account of each being able to make use of the other's facilities. Minnesota can collect the northwestern points relatively more cheaply than Chicago, and Chicago can collect Iowa, Illinois, Indiana, Ohio, Michigan and, perhaps, Wisconsin, more cheaply than Minnesota. By this reciprocal arrangement each extends its territory without materially increasing its expense account. A large number of our Western banks who do not collect at par charge only the exact exchange cost of collections, thus putting their machinery at the disposal of their customers free. These banks cry out against the par list, but they are going more than half way. Of course their actions suggest the question, "Why not charge enough while you are about it so as to make a handsome profit, instead of merely seeking to avoid a loss?" The answer to this question may be found in the second point of my argument.

That wherever competition exists it forces the banker to give additional favors to depositors and cheaper, perhaps par collections are the necessary result; under these conditions it surely cannot be maintained that par collections are opposed to good business principles.

In New York the question of rate-cutting has been settled, for the time at least: that the New York trust companies and independent banks can ever take enough business from the clearing-house members to force them to change their rates is doubtful: New York exchange at present is a necessity to all bankers and as long as New York retains its position as America's clearing-house its bankers can do about as they please, and I will admit that it seems to be good business, under existing conditions for them to charge—very good business. But the other financial centers of the country are not "in the trust," and as long as they contend for supremacy it is sound policy for them to back up their contentions with the greatest favors which they can afford to give depositors. No one can call one or even two-

tenths of one per cent. a very great price to pay for business that is worth from three to six per cent. It seems that the banks cannot claim that they lose money by collecting at par, but rather that if they could run up their charges to suit themselves they would be able to make larger profits—in some cases much larger than the current money market will justify. I know a bank which last year paid a dividend of twenty-five per cent. to its stockholders; this bank charges a very substantial sum for all collections; fortunately it is situated where competition cannot effect it but if it should get up some morning and find a wide-awake rival across the street and be obliged to collect at par to meet with competition, would you, in all fairness, say that it was not in accordance with sound business principles to do so because such a course might make next year's dividend twenty per cent instead of twenty-five?

Boston has settled this country check problem in exactly the opposite way from New York and has brought down the cost of collection to less than six cents per thousand and this is chiefly machine cost, not exchange. It would seem that the Boston banks can afford this cost without impairing their dividends.

Philadelphia and Chicago have profited by the action of the New York banks in that they have been able, by means of a tempting par list, to get balances that formerly went to New York. It is argued that many accounts get their collecting done at par in Chicago and Philadelphia, and then keep the proceeds in New York. When this is true the poor business sense of the collecting banker seems to me not to lie in making the collection at par, but in not stipulating as a consideration for his favor, that the proceeds of collections shall remain on deposit with him.

The test of time proves all things. Whether the bankers of the country will follow New York or Boston, whether they will combine to tax the country check out of existence or establish in all financial centers country clearing-houses for check exchange till this form of paper costs less than national currency, time alone can show.

In this connection I am ready to introduce my third argument. To encourage the country check by taking off the tax will vastly increase the check currency of the country. This will result directly in a benefit to the banker when money is scarce. At present from eighty to ninety per cent. of all transactions is effected by checks. Check currency is perfectly elastic, sufficiently safe and very convenient.

A single instance will show the possibilities of the country check in time of monetary stringency.

In the fall, when the grain begins to come in, the shortage of money always becomes apparent. It is the custom of the elevator companies of my city to ship currency to their country agents to buy wheat; this is done, of course, through the Minneapolis banks.

About five years ago we used to ship, perhaps, one thousand dollars in every ten to a country bank to pay wheat tickets with. The other nine thousand would be sent direct to the grain buyers. To-day fully half of all shipments go to the country banks to pay wheat tickets. This is because the elevator companies have discovered that the country banker can make a thousand dollars go a great deal farther than the company's agent can. There is a reason for this. When the farmer gets cash for his grain he takes the money home and shows it to his wife and they are glad they have got it; they like to have it on hand and know they have it. The chances are that they will defer paying it out for a few days at least, just to have it round; then when the time comes to pay for the last year's plow that they bought of some one of the city dealers, they have to go to the bank to get a draft and that is some trouble and causes a delay in getting that currency back into circulation. But if the money is shipped to a country bank the farmer has to go there to get a wheat ticket cashed, and it is reasonably certain that if the country banker is good for anything the farmer will not get away with all his money, or perhaps with any of it. He will pay that note he has in the bank, or at least the interest on his mortgage, and probably he will leave the balance of his money on deposit. When he pays for his machinery, he will send his personal check to the city merchant and feels glad all day that he has saved fifteen cents which a draft would have cost him. The country banker is benefited by this in increased deposits (there is one county in southern Minnesota where it is said that every farmer has a good balance in the bank) and the available currency is kept in circulation. The farmer is learning the advantage of a bank account and every check he issues relieves the currency situation just that much in the busy season. I think it can hardly be said it is against good business to help the country check by clearing it at par, at the very least such a statement is hardly appropriate until we have provided a currency that shall meet our needs and make the country check of less importance to all parties.

To sum up my arguments: I maintain that to collect a country check at par is strictly in accordance with good business principles for the following reasons:

1st. To collect at par means a larger amount of good business at a very moderate outlay, and good solid advertising right where it will do the most good.

2d. It is the cheapest and best way to resist competition, both between institutions in the same city and between the larger financial centers.

3d. It stimulates the use of the country check, thereby relieving our annual tight-money periods, and by this means benefiting directly every banker in the country.

To ask a debater to prove that a principle must be always right in every possible case and under all circumstances presupposes a very elastic principle. I apprehend that if in the present instance we can show that the collection of country checks at par is under existing circumstances perfectly in accordance with general business principles, we have won our point. This I have tried to do.

THE CHAIRMAN : I take pleasure in introducing Mr. A. H. Jones, of Philadelphia.

MR. JONES, FOR THE AFFIRMATIVE.

MR. JONES: Mr. Chairman, Ladies and Gentlemen—It is remarkable how many different opinions we get from different parts of the country, and all of them apparently exactly right. Of course, I have no right to question any of the arguments of my opponents. But if they are positively true, then the conditions in Philadelphia are vastly different from any part of this civilized globe. Certainly it is not because where a man deposits a thousand dollars in Philadelphia and wants a draft to pay a debt in the country, he is not charged ten cents or one cent. If that is the case in Minneapolis then the Minneapolis banks are carrying out the argument of this resolution where it says, "Is it good business principles for the man who owes the money to pay the bank the exchange in transmitting the money to the debtor?" And with all these differences we are of one mind on one thing, and that is the purpose of a bank is to accommodate, in one sense of the word, its depositors. And another one which follows that is this: That we are of one opinion that banks to-day are not granting the accommodations which business demands. Banks in no part of the country to-day are giving the accommodations which business demands. Now, why is it? It is because they haven't got the ability to do it. When you take up a bank statement and see the "Due from banks" column amount to thirty per cent. of deposits, is it a surprise to you that that bank is not able to give the accommodation? I have in my mind a Philadelphia bank which has all it can do to pay a six per cent. dividend in a year. And one of the clerks told me that the credit account of their exchange account amounts to \$3,000 a year, and that very same day I looked at their statement, which was made two days before, and I found that the "Due from banks" column was thirty per cent. That bank is going down hill; it can't give the accommodations to the customers which the accounts justify. It has cost that bank, in order to save the exchange, which the drawer of the check should pay, or the depositor—in order to save that exchange, it has thirty per cent. of its deposits scattered broadcast over the land. That is the great trouble to-day, gentlemen. A bank's duty to its customers is to get in its money as quickly as it can. And business to-day is in such condition that banks cannot get their money in quickly unless they pay exorbitant rates of exchange. To-day when I walked up one of your streets I saw on the front window, "Five per cent. paid on deposits." Is it possible that banks in Cleveland are getting such an exorbitant rate of interest that they can pay five per cent. on deposits? No Philadelphia bank can do this. Is it right that the Philadelphia bank should pay one-half of one per cent. exchange on items which they are compelled to take? I know it to be a positive fact that a railroad which has its headquarters in Cincinnati, goes to Philadelphia to purchase its supplies. It remits with a Cincinnati draft. If that Cincinnati railroad owes the Philadelphia Hardware Company a thousand dollars, \$999.99 will in no sense of the word justify that debt. One thousand dollars and nothing less it takes to justify a thousand dollar debt, and if you offer anything else, it is because you are in a position to squeeze your creditor and he has got to keep his mouth shut. And still that is called good general business principles. Is it proper for \$99.50 to wipe out an indebtedness of \$100? New York banks have been criticised for charging exchange on everything. And it is very truthfully said that Philadelphia and Baltimore banks are to-day made the dumping ground of these Western banks for the Eastern exchange. Philadelphia to-day can scarcely get one dollar from Pittsburg, and why is it? It is because everything is shoved to Philadelphia. And what Philadelphia has they can't get back. Pittsburg, however, can charge exchange because they have got the nerve. Pittsburg can't remit because they haven't got the money. In the meantime who suffers? Is it in any fault of the Philadelphia banks that we should suffer? Is the condition brought about by negligence on the part of the Philadelphia banks? By their ignorance or reckless business methods? Is it brought about by this, that banks are in a position to do that work. One account pays. That man has got a friend in that bank who has an account in that bank that doesn't pay. The account that doesn't pay the bank dare not charge exchange for fear of losing the other—a good account. An example was given me the other day by one of Philadelphia's largest banks who had a charge sent them from a Western bank. Of course you know, the judges know, and the members of the American Institute of Bank Clerks know, that Philadelphia hasn't adopted this exchange rule. A bank in Philadelphia received a check on another city for \$5,000; it was drawn on the First National Bank, we will say. In order to comply with the rulings which had been

made by the courts, they didn't send it to the First National Bank; they sent it to the Second National Bank of that city, and the Second National Bank deducted \$8.50 exchange, and sent them back what was left of that check. Our Philadelphia bank held that that was pretty steep. The Philadelphia bank wrote to the Second National Bank and took them to task for that exorbitant charge. The Second National Bank wrote back and said, "We didn't make a cent on that. The First National and ourselves have a common agreement that whatever comes into our hands we will charge you one-eighth, and we have you where the hair is short, and if you think it is good business principle to pay these fellows you can do it, but we won't do it. And if your customer doesn't demand of your depositor to send him for his indebtedness a draft or eastern exchange to cancel his indebtedness, then you have got to stand the loss." And by sustaining loss you have got to make it up somewhere. Where is it? Where do banks make their money? By interest and nothing more. The higher the rate of exchange the higher the interest must be in order to pay that exchange. If high rates of exchange mean high rates of interest, then low rates of exchange must necessarily mean the opposite. And if a man can get money for two per cent. he is going to take a good deal more money at two per cent. than he would take if he was obliged to pay six per cent. And if he can do so much business on a thousand dollars, if he is a good business man, he is going to do so much more business on \$1,500. So that it is just a matter of business that if a depositor can obtain funds to carry out his legitimate business, he is going to do it. But when, as I say, banks have thirty per cent. of their deposits flying all over the country in order to save exchange charges, then the depositor can't get the money to carry on his legitimate business.

THE CHAIRMAN: Before calling on the third speaker for the negative I want to remind you of the fact that the speaker in rebuttal for the negative will precede the speaker in rebuttal for the affirmative. In other words, we will, after hearing the next speaker, hear the speaker in rebuttal for the negative, and finally the speaker in rebuttal for the affirmative.

I take pleasure in introducing Mr. J. A. Guild, of Providence, Rhode Island.

MR. GUILD, FOR THE NEGATIVE.

MR. GUILD: Ladies and Gentlemen—It is an honor and pleasure to represent the negative side of this question to-night. An honor and pleasure, because I am addressing the first national convention of bank clerks in this country; a gathering of the coming financial men; and an honor and pleasure because I am contending for a principle—a principle that upholds and maintains the structure of credit that millions of American citizens have earnestly striven to perfect for generations. A structure on whose cornerstone is deeply engraven these words, "A dollar shall be worth one hundred cents."

The vital point of our argument to-night is not what is the prevailing mode of collecting checks, nor a justification by our opponents of the arbitrary action of the New York banks; they cannot, by submitting proofs of expense incurred, claim a decision in their favor. The vital point is the principle involved, and if we can prove that in collecting country checks at par the banks so doing are not violating business principles, but rather are upholding those very principles, then we shall gain the verdict of the honorable jury.

I shall prove that the collection of country checks at par is not contrary to general business principles, for,

1st. The credit system of the country demands it.

2d. The assumption of the expense incurred by the individual banks does not violate any business principle.

3d. Public opinion unanimously upholds par collection.

4th. The Boston Clearing-House for country checks is a living proof that it is the simplest, most satisfactory, and least expensive system for handling these items.

The credit system of the country demands it.

Business transactions are consummated by checks more extensively to-day than ever before. Ninety per cent. of the business settlements are effected by this means. Organized banks are the agents in these vast transactions, and upon them depends the safety and integrity of the credit employed. Financial institutions are the dealers in credit, and every effort should be made on their part to maintain the credit system at par, and make the dollar of one party equal to the dollar of every other party.

Checks are the most universal medium of exchange, and should be unquestionably accepted dollar for dollar.

Any act on the part of a bank to make the check credit of one individual worth but ninety-nine cents on the dollar to another, is a violation of the principles of credit and a violation of the principle of business.

Any act that tends to strengthen the system of credit at par is a direct benefit to the in-

terests and welfare of every community, and in accordance with all lines of business principles.

Bank currency plays but a small part in the movements of business, and yet the parity of its dollar is inviolable. Shall the system of check credit, which furnishes the motive power for the great percentage of business, be subject to depreciation at the will of any institution that, because of its all-powerful hold upon the business interests, seeks to defy those interests to benefit itself?

By the charge on checks a creditor is made to receive less for his goods than what he has sold them for, or the debtor is compelled to pay one hundred and one cents on the dollar, because the bank in which the creditor deposits the check refuses to accept it at par.

The acceptance by the banks of the checks at par gives equal rights to debtor and creditor, and therefore upholds business principles.

The assumption of expense incurred by the individual banks does not violate the principle. Every banking institution has an undeniable right and privilege, in order to hold its present customers and attract new business, to use every legitimate means commensurate with safe and consistent banking, so long as it earns for its stockholders a reasonable income on their investment.

The New York banks, in spite of the expense attached to the collection of checks, paid an average of nine and one-half per cent. on their capital stock, and increased their surplus profits at the same time.

A bank gives to its customers check books, deposit books, miscellaneous paper and stationery; provides rooms and conveniences for their use; employs capable men to attend solely to their wants; collects their checks; pays them interest on their balances; and advertises extensively to retain them and attract others. All at a heavy expense, but all to its own direct advantage.

Shall the banks charge for their stationery? Shall they charge for their counsel and advice? Shall they charge for the use of telephones, writing materials and other conveniences? Shall they ask so much from each depositor for each advertisement they issue? Such questions are too absurd to answer. Then can it be contrary to business principles to also collect their checks without charge, for the collection of these checks comes under the head of running expenses just as rightly as do these other factors.

Public opinion unanimously upholds par collections. James Bryce, author of "The American Commonwealth," says, "Public opinion has been the chief and ultimate power in deciding business principles."

I present to you public opinion upon this question, in the form of letters from thirty-three Presidents, Cashiers and clearing-house managers, from Maine to California, from Cleveland to New Orleans; letters from two of the best-known political economists in the country; the opinions of five bank attorneys and corporation lawyers; and the result of interviews with over one hundred successful business men.

Outside of three or four bankers, there is not a dissenting voice to be found, that checks, the medium of exchange of the business man, should be maintained at par at all hazards, and that principles were wronged by a contrary practice.

The business man demands par collection, because—

1st. A check, whose goodness is unquestioned, should have the same value when sent in payment of goods bought, as if a bank bill had been used. For the banks on the side of principle should do everything in their power to aid and facilitate the business conditions that enable one party to transact business with parties outside his own city, and the treatment of checks at their face or par value cannot be contrary to any principles that govern these transactions, for it upholds the honor and integrity of all parties.

2d. Because in receiving a check for a bill of goods he should not be compelled, after giving a receipt in full, to pay a discount in the shape of bank charges. Or, on the other hand, if the drawer of the check is notified that it will not be handled at par, he has to purchase exchange, thereby paying more for his indebtedness than the amount of his bill. Is this right? Is this business principle?

The most strenuous of "check chargers" among the bankers, whose letter I hold, have given force to our argument, for while stating that they believe in making a charge on country checks, also state that viewing the question broadly, as this question must be viewed—the process that would be ideal, and the best suited to all concerned, would be a system by which all checks would be collected at par.

Or, we might view it in the light that a Western institution sees fit, when it says, "The problem of collecting country checks is a matter for each individual bank to decide. If it wishes to assume the expense of collecting such items, it is no one's business but its own, nor can we see wherein it is violating any business principle."

The answers from the great majority of bankers that have been approached are contained in these few words. The collection of country checks at par is not contrary to business prin-

ciples, for if all the banks would unite and adopt that method there would be no excuse for a contrary practice.

The consensus of opinion of the bank attorney and corporation lawyers is as follows:

1st. The principal of charging for the collection of checks is wholly wrong, for it is a restraint upon the free use of checks as a medium of exchange, whereas the check system should be encouraged and not hampered.

2d. A bank has not a moral right to discount a check given in good faith in a legitimate transaction. For it is arbitrarily increasing the cost of merchandise, or lowering the profit of the seller.

3d. Retrenchment of a bank's expenses should be done in some other manner than by taxing the credit exchange, for its collection is not by any means the heaviest expense incurred in the business. Cut out the interest on deposits alone, and the expense entailed by collection would not be thought of.

4th. As a matter of principle, the principle is sustained by the collection at par, and violated by the collection with a charge, for the acceptance of a check at par is in direct accordance with the rigid government policy of maintaining the parity of the medium of exchange.

"I cannot see," writes a prominent political economist whose letter I hold in my hand, "that the collection of country checks at par violates general business principles. From the point of view of the public, par collection seems to me extremely desirable. It is a good thing to have the use of checks extended as widely as possible, and anything that contributes to that end is a direct help to business and credit."

The Boston Clearing-House for country checks is a living proof that it is the simplest, most satisfactory, and least expensive system for handling these items.

Francis B. Sears, Vice-President of the National Shawmut Bank, Boston, is a prime mover in the plan adopted by the New England banks, and states the following:

"The Boston plan demonstrates that a system of free exchange between sections of the country is desirable, and a help to the community. The New York plan puts a tax upon the check which has a tendency to restrict its use. The cost of collecting the New England checks, before the clearing-house was established, was estimated at \$750,000 a year; the total expense of this collection at present is considerably less than \$40,000.

One-twentieth as much, or, in other words, the old method entailed an expense twenty times as great as the present par system.

He continues: "It is a fact within my personal knowledge, that bankers in all sections of the country have been watching this system, and are considering the possibilities of such a system in their own localities."

Can this be contrary to business principles?

Mr. C. A. Ruggles, Manager of the Boston Clearing-House, writes:

"There is no doubt in my mind that our method is the best system in dealing with country checks, and has proved very successful and eminently satisfactory.

"We collect at par for 621 banks outside of our own city, and in the last year we collected \$616,000,000 at a very much less cost than would have been possible in any other way."

Does this constitute a violation of general business principles?

I submit:

1st. That the credit system of the country is sustained by the collection at par.

2d. That the assumption of expense incurred by each individual bank in the collection of its checks does not violate a business principle.

3d. That the best business men, the lawyers, the political economists, and the great majority of bankers are in favor of par collection.

4th. That the system of the Boston clearing-house for country checks, not only is not contrary to general business principles, but is a crowning proof that it is the most satisfactory and simplest solution of the problem of handling these items.

I submit that the collection of country checks at par is not contrary to general business principles, but rather fosters and upholds those very principles.

THE CHAIRMAN: We will now hear from the first speaker in rebuttal.

MR. EVERS, IN REBUTTAL.

Mr. EVERS: Ladies and Gentlemen—Before you make up your minds as to the merits of the different sides of this question, let me call your attention to the wording of the resolution:

"That the collection of country checks at par is contrary to general business principles."

This is not a debate on the question of the use of the country check, it is a question of whether it should be taxed or not.

Our friends seem to think that the country check ought to be eliminated altogether; that will never come to pass. Under the present system of collection our opponents have backed us up in the statement that there is a good deal of gratuitous collection. A check starts from

its starting point to the depository bank and wanders all over the country before it gets to its destination. There can hardly be good business in the system that permits that. The question is, whether imposing the charge of collection for doing away with the method of its collection. We claim that by instituting the system of clearing-houses, checks will be presented and paid for without loss of time and with but very little expense. One of my worthy opponents asked me to explain the New York and Boston charges. There is a vast difference between the charges of New York and Boston banks. New York banks charge on everything. Boston banks merely charge for the checks on which they have to pay. All other points at which they collect at par they give their customers at par. There is no discrimination with out-of-town banks and the individual depositor. Our Philadelphia friend seems to think Philadelphia is in a bad way. The Philadelphia bankers got together to decide whether they should take the same action or not. The small banks were in favor of instituting this charge; the large banks said no, we are making money out of it as it is. It means too much for us, and supporting their version they pointed out the difference between the individual deposits and bank deposits. When Baltimore instituted this charge three of the largest banks of Philadelphia sent representatives to Baltimore to try and swing the business to Philadelphia banks. Our friend cites an instance where he saw a sign in a bank paying five per cent. on deposits. I would like to ask whether that wasn't a Savings bank. I think it was a Savings bank. What has a Savings bank got to do with this matter? Don't they refuse to collect checks? Public opinion is to be counted. The "New York Tribune," with its circulation which means a hundred thousand dollars a year, much of it in one-dollar checks, could hardly afford to pay ten cents for the collection of these checks. Strong editorials were published on the subject; they published over sixty columns of letters from New York business men, and the New York banks reduced the charge of ten cents and wrote their clearing-house to work in this way.

Gentlemen, our opponents have attempted to keep this down to the narrow point of view of the individual banker. Now, we claim from the very wording of the resolution that it must be lifted to a higher plane, that of broad business principles, and we think in our arguments we have shown that the business community would be benefited by the freer use of the bank check.

THE CHAIRMAN: Mr. Jones will close the debate, speaking for the affirmative in rebuttal.

MR. JONES, IN REBUTTAL.

MR. JONES: With all the ideal forms which have been adopted by the Boston Clearing-House, which my honored opponent has tried to make you believe are just right, the Boston Clearing-House has a list which ran up to one-quarter of one per cent. of exchange. The same representative from Boston claims that the bank has no right to discount a check. Now, then, he means, of course, as between the bank and its depositor; there it stops. It remains for me to bring out into the argument, or try at least to bring out, the argument which we are trying to present, and that is, that a bank has no right to discount between the banking bank, if a bank has no right to discount for a banking depositor. In the eyes of the law it is between two individuals, neither of which has a preference over the other, and if my opponent's statement is true, then it is equally true that a bank has no right to discount a check as between a bank. Unfortunately, I did not notice the name of the bank upon the street to-day which had out the sign of five per cent. It may have been a Savings bank, and I will give it the benefit of the doubt and say it was a Savings bank, and in addition to that I will say that the Savings banks of Philadelphia do not refuse any checks deposited in them, but on the contrary they take them in and dump them into the National banks, and the National banks pay the exchange.

We will take the instance of the "New York Tribune." The "New York Tribune," I am told, has one hundred thousand checks every year at one dollar apiece, and the "New York Tribune" can't afford to pay ten per cent. of those hundred thousand checks, but who is going to pay it? Where does that \$10,000 expense fall? Where does it rightfully belong? It falls on the banks, but does the bank get any advantage out of that? Do you mean to say that \$100,000 spread over one year, and \$10,000 exchange on that is going to pay a bank? No, sir. If the "New York Tribune" at any time during its existence had such an account in the bank, I venture to say that there was another account in that bank to hold it there, otherwise the bank would not have been bothered with it. My opponent says interest rates are larger than during the war. I will agree him. When I went into the Bank of Philadelphia I went into a very small bank. The exchange account of that bank, the first year I was in it, was about \$1,500 for the year. After spending nine years in that bank, that bank's deposit had decreased about \$800 a day.

That bank's exchange had increased a hundred per cent.—the interest rates increased. That bank's accounts hadn't been changed—no new accounts had been added to it. That

bank's deposits were decreasing continually, and its exchange charges were increasing continually. And why? It is because the country banks today have got it into their heads that they can shave checks, and "shave" is the word. We got a letter from a private banker in an interior city. The bank that I was employed with was at that time inclined to mistrust him. They collected his checks by express; it cost them forty cents apiece to collect his checks. They had two accounts—there was another account which brought that bad account in, and we simply had to swallow that exchange of forty cents. About every three weeks we would get a letter from this banker reading this way: "For \$5 checks I will charge you ten cents apiece; \$10 checks, 15 cents; \$15 checks, 25 cents apiece. On one occasion we sent him by mail four checks which amounted to less than \$16. The exchange on that \$16 was just exactly 40 cents—ten cents apiece. If that isn't highway robbery I would like to know what it is. If he came down and picked your pocket you could have him arrested, but if he shaves your checks you couldn't do anything with him; that is a positive fact. If that is anything short of highway robbery, then I mistake the meaning of the word. The New York banks have been criticized by one of my opponents, and on the other hand have been in a measure commended for their action in making this ironclad rule. The day before I left Philadelphia one of the Cashiers in Philadelphia told me that a Cashier in a medium-sized bank in New York told him that before that ironclad exchange rule was put into force, that their exchange amounted to \$80,000 a year. Is it reasonable that a bank should pay \$80,000 a year—and if it is reasonable, where do you suppose they are going to make that \$80,000 a year? There is only one way under the sun for them to do it: it is either by interest, legitimate banking, or else by speculation—which is a crime—that they can make that \$80,000. If you can put out money at four and one-half per cent., you can put out twice as much at that rate as at six. He says that it takes a hundred cents to cancel a debt of one dollar. Well, that is what I have been trying to argue. I apparently have failed, or else he missed his guess—one or the other. If it takes one hundred cents to cancel a debt of a dollar, is it proper in his estimation that a bank within twenty miles of Philadelphia should take one-twentieth of one per cent. exchange off of checks which are drawn upon themselves, and which were sent by the Philadelphia bank? I venture to say that ninety per cent. of the checks which they received for deposits were checks on Philadelphia banks. The Philadelphia exchange cost them nothing, and yet they deducted one-twentieth of one per cent. on every item the Philadelphia bank sent them. And that is getting to be so universally the custom, not only in Pennsylvania, but every other State, that cities like Boston, New York, St. Louis, have adopted this ironclad rule of charging exchange and placing the exchange on the drawer of the checks, where it rightfully belongs. If it takes one hundred cents to cancel a debt of one dollar then a man who buys one hundred cents' worth of goods should tender a check for \$1.10.

(Time called.)

THE CHAIRMAN: I am informed by the judges that they have selected Mr. Paton to be their spokesman, and I know you are all anxious and glad to hear from Mr. Paton.

THE JUDGES' DECISION.

MR. PATON: Members of the American Institute of Bank Clerks—The judges have had a hard task to decide. We feel all the arguments are very good and very strong. In the decision made, the merits of the question—the individual opinion of the judges upon the merits of the question—have not been the test, but the decision has been made upon the strength and merits of the arguments presented.

After due consideration, we have concluded that the negative have presented the better argument.

DEATH OF JOHN G. FLOYD.—John Gelston Floyd, a former publisher of THE BANKERS' MAGAZINE, died December 1 at his residence, 138 East Thirty-seventh Street, New York city. He was the son of John Gelston Floyd of Mastic, L. I., who was a member of Congress, and grandson of Gen. William Floyd, a signer of the Declaration of Independence. He was born at Utica, N. Y., in 1841 and was graduated from Rutgers College in 1859 and later from the Albany Law School. During the Civil War he raised a company on Long Island and served as a captain. For thirty years he was publisher of the "Commercial and Financial Chronicle."

Mr. Floyd purchased THE BANKERS' MAGAZINE in December, 1894, and continued to be the publisher and owner until June, 1895, when the MAGAZINE was merged with RHODES' JOURNAL OF BANKING. He was a publisher of long experience and was remarkably successful.

PUBLICITY OF THE OPERATIONS OF CORPORATIONS.

In his annual address at the recent convention of the American Bankers' Association at San Francisco, President Caldwell Hardy spoke in favor of the principle of publicity of the affairs of corporations. He expressed the opinion that the movement in the direction of publicity, inaugurated by the Government through the new Department of Commerce, would meet the approval of the best banking thought of the country. President Hardy called attention to the statements published by banks and insurance companies, and the good effects of such publicity.

Many of the great industrial corporations have been formed under the New Jersey law, and the corporation law of that State has been made the subject of considerable criticism. A new law in regard to corporations recently went into effect in Massachusetts. The following summary of the law was published in the "Boston Evening Transcript" November 7:

"In the case of Massachusetts, while there is greater liberality than before, the aim has been to offset this with the largest degree of publicity as to what constitutes the assets of the corporation, the manner whereby these assets are acquired, and other data calculated to throw light on its operations in the interest of the investor. In this respect our new act followed closely the 'British Companies' Act,' which has been held up as a model of corporation legislation by the most pronounced critics of the present law, and provides the very safeguards that are contained in the English institution.

The new Massachusetts law is, moreover, headed in the same direction as the Federal Bureau of Corporations, the design being to create corporations by a process as nearly uniform throughout the country as the circumstances warrant. Consequently any comparison with our corporation law and that of New Jersey must be to the advantage of the former.

In making their declaration to the Commissioner of Corporations, the directors of the Massachusetts company are required to state, besides the facts relating to the amount of capital stock, its character and the method of its payment. If the stock be paid for in part by property the amount of such is to be given, and, in the case of real estate, its location, area, and the amount of stock to be issued for each piece must be stated. If any part of the property is personal it is to be described in such detail as the Commissioner of Corporations may require, and, as in the case of real estate, the amount of stock to be issued against it. There is still another provision requiring that, if any part of the capital stock is issued for services or expenses, their nature and the amount of stock issued therefor shall be clearly stated.

The New Jersey laws, on the other hand, require merely a statement showing the total capital stock, together with the amount paid in, given in the abstract, regardless of what it consists of or its value to the company. The annual report, as provided for in New Jersey, requires only the barest facts: the amount of capital, the names, addresses of the directors and location of the office, but no statement whatever as to the financial or other condition. The Massachusetts law requires * * * in addition to this purely perfunctory statement, definite information every year regarding the assets and liabilities of the corporation. These are to include the following items, each treated separately: Real estate, machinery, merchandise, cash and debts receivable, patent rights, trade marks, good-will, capital stock, accounts payable, funded indebtedness, floating indebtedness, surplus and profit and loss.

A strong point for the Massachusetts law, as compared with the New Jersey one, is that the Massachusetts statute provides for the scrutiny of such assets, as well as the kind of service rendered and the remuneration allowed for same, by the Commissioner of Corporations, whose indorsement is requisite to give the corporation legal standing."

Allegheny Bank to Resume.—The Comptroller of the currency authorized the First National Bank of Allegheny, Pa., to resume business December 7.

Charles E. Speer, President of the First National Bank of Pittsburg, has been elected President; F. H. Skelding, Cashier of the First National Bank of Pittsburg, has been elected Cashier, and a reorganization of the board of directors has been effected.

NOTICES OF NEW BOOKS.

[All books mentioned in the following notices will be supplied at the publishers' lowest rates on application to THE BANKERS PUBLISHING CO., 87 Maiden Lane, New York.]

HISTORY OF COINAGE AND CURRENCY IN THE UNITED STATES, AND THE PERENNIAL CONTEST FOR SOUND MONEY. By A. BARTON HEPBURN, LL.D., ex-Comptroller of the Currency, ex-Superintendent of Banking Department of the State of New York, Vice-President Chase National Bank. New York: The Macmillan Co.

The field of monetary and banking literature, which but a few years ago was almost barren, is constantly being enriched by contributions from the pens of the country's ablest bankers and economists. Mr. Hepburn is admirably qualified, both by his official experience and his business connections, to write with authority on matters pertaining to the country's banking and currency systems. He has patiently traced the monetary history of the country from colonial times to the present, and has clearly illustrated, by record rather than by argument, the disasters which have been suffered by the nation as a result of departures from sound principles. It is probable that the losses sustained through unwise currency legislation have never been so fully considered as they should have been, for the public mind is still hospitable to delusions of this sort. A work like that which Mr. Hepburn presents will therefore be of great value in establishing and maintaining right standards of judgment respecting these matters.

Care and accuracy are manifest throughout the work. We note, however, some slight ambiguities. On page 139 the "Indiana State Bank" is referred to, although the correct title should be Bank of the State of Indiana. Its predecessor was called the State Bank of Indiana, but there was no Indiana State Bank. On page 422 legal-tender notes are declared to be "better than gold certificates," although the preceding pages are devoted to showing how costly the legal-tender notes have been, and the fact of their having been continued as a permanent part of the circulation is deplored. Mr. Hepburn says that the reason the legal tenders are better than gold certificates is because that while they are redeemable in gold, they may be tendered to and forced upon a creditor in satisfaction of his debt. It might be said with equal truth that the legal-tender notes are inferior to gold certificates, because the latter have always been accepted at their face value, while the legal-tender notes required compulsory legislation to keep them afloat even at a discount. The statement that a note only partially secured by coin and that has been kept going only by the issue of \$357,800,000 of interest-bearing bonds (p. 420) is better than one wholly secured, because the former is a legal tender while the latter is not, is an expression of opinion liable to give rise to some of the very fallacies which Mr. Hepburn seeks to controvert. For of all monetary heresies no one has been so instrumental in confusing the public mind and in producing disaster as the notion that superiority is conferred by legislative enactment. It was doubtless intended by the author to say that the legal tenders have the attributes of forced tender, which the gold certificates do not possess. It must not be forgotten that the legal tenders have needed this, while the certificates have not.

As good wine needs no bush to proclaim its virtues, so good money requires no forcing process to compel its acceptance. Legal-tender laws, quite frequently are

a device to force inferior money into circulation. This was certainly the case with the laws making the greenbacks a legal tender. Such laws have been the most effective instruments legislatures could invent to deprive industry and labor of their just rewards.

The following reference is made (page 68) to some of Alexander Hamilton's reflections on banking :

"Hamilton's statements of rudimentary banking principles and defence of the character and purpose of banks sounds very droll, read in the light of the wonderful development of modern banking."

On reading the quotations from the first Secretary of the Treasury, however, one is apt to be struck quite as much by their soundness and good sense as by their drollery. Rudimentary though these statements were, they may be read now and hereafter with profit by every student of banking and finance.

In citing authorities, Mr. Hepburn appears to have relied too much upon other authors of similar works, instead of going to original sources of information. A single example out of many that might be given will illustrate this. On page 98 he says : "The safety-fund system was adopted by statute in New York State in 1829." Knox's History of Banking is cited as the authority for this statement, although the acts of the New York Legislature are easily accessible.

It is fortunate for those engaged in the study of the country's monetary history that a book of such high character and broad scope should have been written by a man so prominently identified with political affairs as Mr. Hepburn has been and of such wide and successful business and banking experience. He writes from the standpoint of a man of practical experience, although fully cognizant of sound theories. He shows his comprehension of the true function of history by narrating facts instead of merely writing a series of essays. In other words, he has written a history instead of a treatise. In compiling the statistical information, which is notably complete, Mr. Hepburn has had the assistance of Mr. Maurice L. Muhleman, an unquestioned authority on financial matters.

It is interesting to note what Mr. Hepburn has to say in regard to probable lines for currency reform (page 483) :

"The establishment of a central or United States bank at the present or in the near future is altogether improbable and perhaps altogether undesirable. The existing National banks, so far as their note-issuing function is concerned, can be sufficiently welded together by uniform law and central supervision to make them practically one institution. Circulation can be made uniform and national in character, good beyond peradventure, by means of a redemption fund and a guarantee fund, easily convertible by central redemption, sufficiently elastic to respond to the varying needs of trade by basing the same in whole or in part upon assets or credits, and by graduated taxation the volume may be made to contract, in order to avoid speculative redundancy. In short, it can be made safe, convertible, elastic. All this can be done as well as with a United States bank. In fact, the whole system would amount practically to one bank so far as note issues are concerned and at the same time by preserving the individuality of the different banks would leave to the various localities the individual enterprise, local pride, and efficiency of management born of local knowledge, which is a consideration of paramount importance in a country of such wide extent and diversified interests as ours."

Considering the breadth and thoroughness of treatment of the subjects embraced in this history, and the manifest disposition of the author to record them with accuracy and fairness, and his exceptional ability to discern their proper relation to monetary evolution, it may be justly said that Mr. Hepburn has made a contribution to American financial literature that deserves to take, and will take, the very first place. It may be read with interest and profit by every one who desires to learn the facts relating to the financial history of the United States and who wishes to gain correct deductions from the record thus presented.

BANKING AND FINANCIAL NEWS.

This department includes a complete list of **NEW NATIONAL BANKS** (furnished by the Comptroller of the Currency), **STATE AND PRIVATE BANKS**, **CHANGES IN OFFICERS**, **DISSOLUTIONS AND FAILURES**, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—Alexander H. Stevens, Vice-President of the Astor National Bank, and also of the Gallatin National Bank, was elected a director of the Century Bank November 13 to succeed Philip P. Dodge.

—Dumont Clarke, President of the American Exchange National Bank, succeeds the late Herbert B. Turner as director of the Lawyers' Title Insurance Co.

—Messrs. Fisk & Robinson were recently awarded an issue of \$1,000,000 $1\frac{1}{4}$ per cent. Hawaiian Territorial bonds. The bid was at par. The bonds run for fifteen years and are exempt from all taxation and are authorized to be deposited with the Treasurer of the United States by United States depositories and fiscal agents as securities for deposits of United States funds.

—W. Condit Varich has been chosen Cashier of the Sprague National Bank, Brooklyn, to succeed James M. Doremus, who resigned to engage in private business. Mr. Varich was formerly connected with the Fourth National Bank and for the last two years has been a National bank examiner.

—On November 23 the Bank of the Metropolis took possession of its new sixteen-story bank and office building at the northwest corner of Broadway and Sixteenth street. For the past seventeen years the bank has done business on the opposite corner. The new building is a modern fireproof structure, built of stone and steel. The bank will occupy the ground floor.

—At a meeting of the board of trustees of the Fifth Avenue Trust Co., November 5, Valentine P. Snyder, President of the National Bank of Commerce, and Cecil D. Landale, Second Vice-President of the trust company, were elected directors to fill vacancies caused by the resignation of August Belmont and Frank Tilford.

—A new branch of the New York Produce Exchange Bank is located in the new apartment hotel, Broadway and Eighty-fifth and Eighty-sixth Street.

—The stockholders of the National Bank of Commerce held a meeting November 20 and ratified the proposition of the directors in regard to changes in the articles of the bank. The changes provide that there shall be an annual meeting on the same day in January on which other annual meetings are held, that the stockholders shall elect the directors and that more than one Vice-President may be elected.

The Bank of Commerce, which recently merged with the Western National Bank, had formerly a provision in its charter whereby its directors constituted a self-perpetuating body.

—A. D. Seymour, formerly Superintendent of the Hanover Safe Deposit Vaults, was recently elected Vice-President of the Manufacturers' National Bank, of Brooklyn. F. D. Mollenhauer was elected a director of the bank.

—The Malden Lane National Bank is being organized with \$250,000 capital. It is expected that the new bank will be located in Malden Lane near William Street.

NEW ENGLAND STATES.

Boston.—E. A. Phippen has resigned as Secretary of the Old Colony Trust Co. and has been succeeded by E. Elmer Foye, formerly Assistant Secretary. Mr. Phippen will continue to be Assistant Treasurer, having heretofore held this office in addition to that of Secretary.

New Haven, Ct.—The Merchants' National Bank recently issued a pamphlet giving an interesting historical sketch of the institution. The bank was founded in 1851, and began as a State bank (as did most of the banks of New Haven) July 24, 1851. It was not until the

State Legislature had received an agreement from the founders that the following benevolences would be paid by the bank that the charter was granted: \$4,000 toward the expense of a fence around the central green; \$2,000 to the Young Men's Institute; \$2,000 to the General Hospital Society of Connecticut, and \$2,000 to the State Reform School when it should be established.

The present officers of the bank are: President, Charles S. Mersick; Vice-President James English; Cashier, David A. Alden; Assistant Cashier, Henry V. Whipple.

The Merchants' National became a National institution in May, 1865, and its name was, changed to the Merchants' National Bank. Regular dividends of six per cent. are paid and its stock is quoted at 64½, the par value being 50.

The capital of the bank is \$350,000; surplus and profits \$153,000; deposits, \$1,238,000.

MIDDLE STATES.

Pittsburg.—At the recent annual meeting and election of the Bankers and Bank Clerks' Mutual Benefit Association D. C. Wills, auditor of the Mellon National Bank, was elected president.

Addresses were made by John S. Scully, the retiring president, and by S. R. Shumaker, Vice-President of the National Bank of Western Pennsylvania, and by W. M. McFarland, of the Westinghouse Co.

—The Federal National Bank, which closed October 21, has been declared solvent, and it was announced that the bank would resume business on December 7.

Baltimore's Financial Growth.—The Baltimore "Sun" of November 20 contained the following: "In the last ten years Baltimore's banking institutions have greatly increased their capacity and the extent of their business. A comparison of 1903 with 1893 shows great progress. In the year last mentioned, according to the "Manufacturers' Record," the total of the capital, surplus, undivided profits and deposits in Baltimore's National and State banks and trust companies was \$58,690,564, against \$127,919,541 in 1903, an increase of over 125 per cent. The capital of these institutions has grown in the ten years by \$12,505,148, or over 74.5 per cent., while undivided profits and surplus have grown by \$21,412,455, or over 283 per cent. If to the resources here indicated be added the large capital and business of our private banks it will be perceived that the city's role in the financial operations of this section and the South is very considerable. The Savings banks help largely in the accumulation of the capital available for profitable enterprise. The total of deposits in our Savings banks is now \$66,928,028, against \$41,877,622 in 1893, a gain of 59.8 per cent. If these deposits be added to the banking and trust resources enumerated above it will be found that Baltimore's financial strength of this character aggregates at present some \$200,000,000.

—Negotiations have been concluded for the absorption of the Manufacturers' National Bank by the First National Bank. It is reported that the price paid for the \$500,000 capital of the Manufacturers' Bank was \$607,500.

Peekskill, N. Y.—Owing to lack of space, the *MAGAZINE* was unable to report the meeting held in the latter part of September to commemorate the seventieth anniversary of the Westchester County National Bank. A special dividend of five per cent. was declared, and each employee was presented with \$70—a dollar for each year of the bank's existence. A banquet was given at which were present the officers and employees, and a few guests. Hon. C. A. Pugsley, President of the bank, presided, and addresses were made by Judge Thomas Nelson and others.

The Westchester County National Bank is among the oldest and most successful banks in the State. It is expected that a new building will be erected for the bank in the near future.

Plainfield, N. J.—The rapid increase of the business of the Plainfield Trust Company has made necessary the appointment of an Assistant Secretary. Edward F. Feickert, formerly with Messrs. Kountze Brothers, bankers, New York, has been elected to that office.

The Plainfield Trust Company has met with a remarkable success. It began business in June, 1902, with a capital of \$100,000, and in a little over one year its deposits have reached the total of \$750,000. Officers of the company are: O. T. Waring, President; A. V. Heely, Vice-President; H. A. McGee, 2nd Vice-President; J. Herbert Case, Secretary and Treasurer; Edward F. Feickert, Assistant Secretary.

Butler, Pa.—The directors of the Butler County National Bank recently voted to increase the capital of the bank from \$200,000 to \$300,000, and also to add \$100,000 to the surplus, which was already \$100,000. The market value of the stock is more than double the par value of \$100 per share.

Syracuse, N. Y.—Stockholders of the Commercial National Bank met November 4 and approved the proposal to increase the capital stock from \$250,000 to \$500,000. The surplus will be increased to \$200,000, the new stock being placed at \$140.

Troy, N. Y.—An imposing fireproof building is being put up by the National State Bank. The exterior and interior construction will be modern in all respects. The building will be five stories, and it is expected to be ready for occupancy next April.

Kinderhook, N. Y.—The National Union Bank recently celebrated its fiftieth anniversary in an appropriate manner. It began business as the Union Bank of Kinderhook October 1, 1853. Wm. H. Rainey, the Cashier of the bank, has held that office continuously since the bank was started. Mr. Rainey has been honored by the bankers of the State by being elected vice-president of the New York State Bankers' Association. The bank has had a prosperous career, never failing to pay a substantial dividend, except in 1857, when the dividend was deferred but an extra one was paid the next year.

WESTERN STATES.

Peoria, Ill.—The German-American National Bank and the Commercial National Bank have consolidated and will hereafter be known as the Commercial German National Bank, the merger to become effective December 31. With a combined capital and surplus of over \$700,000, the new institution will be the largest and strongest in the State outside of Chicago. Officers will be as follows: President, Walter Barker; first Vice-President, J. B. Greenhut; second Vice-President, John L. Flinn; Cashier, Weston Arnold; Assistant Cashier, Elwood A. Cole.

Minneapolis, Minn.—At the election of officers of the Minneapolis Trust Co., November 16, Samuel Hill, President of the company, declined re-election, and E. C. Cook was chosen to succeed him. Wm. H. Dunwoody and W. G. Northrup were re-elected Vice-Presidents, and Robert W. Webb, who has been Assistant Secretary, was made Secretary and Treasurer.

Wisconsin Bank Resumes.—The Montello (Wis.) State Bank has resumed with a capital of \$25,000.

Resumption of a Minnesota Bank.—The Mapleton (Minn.) State Bank, which suspended recently pending an investigation of its books, reopened November 3.

Cincinnati.—The Third National Bank now occupies its fine new rooms, which in construction, decoration and equipment are up to the highest standard of modern banking requirements. Its steel vaults have a capacity of 3,500 boxes.

The present officials of the bank are: J. D. Hearne, President; Charles H. Kellogg, Vice-President; William Lemmon, Cashier; C. T. Perin, Assistant Cashier.

Toledo, Ohio—The Security Trust Co. and the State Savings Bank Co. have combined under the name of the Security Savings Bank and Trust Co., with \$250,000 capital.

Location for a Bank.—R. H. Hawkins, of Crocker, Mo., writes: "Would you kindly call attention to the fact that Crocker is a good place for some one to found a National bank. Crocker has no bank of any kind, and there is no National bank in the county nor the vicinity. The State banks at Richmond, Dixon and Waynesville, and at Iberia, Miller county, are all prosperous and their stock sells at from 200 to 225. This is the natural location for a bank, as it is the railroad point for a territory from fifteen to twenty miles north of us, and thirty to thirty-five miles south. Freight comes to Crocker for over twenty-four inland towns and country stores, and mail for sixteen different post offices is thrown off the train at Crocker. A National bank, therefore, cannot fail to be a big thing here. Let some one interested investigate, or I will be glad to give any further information to interested parties."

Cleveland, Ohio.—Geo. J. Johnson was recently elected President of the City Trust Co. to succeed Herbert Wright, who resigned to engage in private business. Mr. Johnson has been identified with the City Trust Co. since its organization, and was an officer of the company's predecessor—the Wick Banking Co., his connection with the two companies as Vice-President extending over a period of twelve years. He will devote his entire time to the management of the company.

Indianapolis, Ind.—The rapid growth of the business of the American National Bank, of Indianapolis, has led it to create the new official position of counsel, with duties relating more particularly to questions arising in connection with credits and securities. Evans Woollen has been appointed to this office and will at once assume active participation in the administration of the bank's affairs.

St. Paul, Minn.—To accommodate depositors having small amounts of funds, the St. Paul National Bank has opened a Savings bank department. In order to keep the investments entirely free from speculative securities only $2\frac{1}{4}$ per cent. interest will be paid.

The St. Paul National has also opened a special department for the use of women—a feature that is being found profitable by many city banks.

PACIFIC SLOPE.

Seattle, Wash.—On November 4 Lester Turner was elected President of the First National Bank, and Charles P. Masterson, formerly President of the Pacific National Bank, Tacoma, but more recently of New York, was chosen to succeed Mr. Turner as Cashier. The Cashiership has been held by Mr. Turner since 1890, and he recently purchased the stock of the bank held by his predecessor. He has been engaged in banking since the age of seventeen, first in Kentucky and later in New York city. In 1884 he went to San Francisco and in 1889 located at Seattle.

Tacoma, Wash.—The statement of the Fidelity Trust Co. on November 17 shows that this institution continues to grow, the deposits amounting on that date to \$1,581,091. Deposits on the dates given were as follows:

December 31, 1901.....	\$726,821	May 31, 1903.....	\$1,406,330
May 31, 1902.....	1,056,711	November 17, 1903.....	1,581,091
December 31, 1902.....	1,128,798		

The capital of the company is \$300,000 and the undivided profits \$55,517.

GUARANTEED DRAFT-CHECKS.

Great inconvenience has been heretofore encountered by commercial travelers and others in getting checks cashed away from home. Even where identification is satisfactorily established, the delay in making the funds available, where a draft is drawn on the firm, causes the traveler to lose valuable time and incur unnecessary expense. In the case of traveling salesmen, they not infrequently call on their customers or hotels to cash drafts for them, thus creating an obligation which limits their independence.

All these annoyances may be avoided by using the guaranteed draft-checks issued by the United States Fidelity and Guaranty Company, of Baltimore. These checks carry with them their own means of identifying the payee, and their payment is absolutely guaranteed by the company having cash resources of over \$3,000,000.

These draft-checks will be a great convenience to all travelers, and they will doubtless become popular. With the guaranty of the United States Fidelity and Guaranty Company, the checks are absolutely safe.

This new feature of the business of the company is an evidence of the keen financial sagacity of the President of the company, Mr. John R. Bland. He was the organizer of the company, having been previously Secretary of the Merchants and Manufacturers' Association of Baltimore, in which capacity he was largely instrumental in promoting the commercial and industrial interests of the city.

Under Mr. Bland's administration the United States Fidelity and Guaranty Company has become one of the strongest and most successful surety companies in the country, doing an especially large business in assuring the fidelity of officers and employees in banks and other corporations.

ON PRACTICAL LINES.—Ben Hayes, Jr., Assistant Cashier Salisbury (Mo.) Savings Bank, writes: "Please accept my draft in payment for one year's subscription to *THE BANKERS' MAGAZINE*. It is certainly well worth the price paid. It should be in the hands of every progressive banker, and is certainly edited on lines of practical banking."

NEW BANKS, CHANGES IN OFFICERS, ETC.

NOTICES OF NEW BOOKS.

FINANCIAL ADVERTISING. By FRANCIS R. MORISON, Wilmington, Del.

Financial advertising, until recent years at least, does not seem to have been made the subject of much special study by those most interested in the matter—the financial institutions themselves. But the large increase in advertising among the greatest and most successful banks and trust companies shows that the matter of advertising is now receiving careful attention. This tendency is further illustrated by frequent addresses on advertising, delivered at bankers' conventions, and also by the occasional publication of books on the subject.

Mr. Morison says that financial advertisements should be very much like advertisements in other branches of business, and not, as is generally the case, mere announcements of title, capital and officers; prospective patrons should be appealed to by arguments likely to arouse their interest, and if the advertisement is well worded, attractively gotten up and well displayed, it cannot fail to gain their attention and hold it.

After enumerating the customary mediums to be used for obtaining local business, Mr. Morison says:

"In large centres where accounts of country banks and bankers or collection items are desired, an advertisement judiciously placed in a bank directory or financial journal, will be found to be of great service."

Many of the cheap catch-penny advertising schemes are severely and justly condemned.

This little work on financial advertising contains a number of helpful suggestions, and also numerous practical illustrations of appropriate wording and typographical arrangement of bank and trust company advertisements. It will be found useful and valuable to those who are seeking to improve their financial advertising.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, December 3, 1903.

A MORE FAVORABLE SENTIMENT began to manifest itself in financial circles late in the month. During the early part of the month the situation in Wall Street was not encouraging. Prices recovered only to decline again, and when a stock like Pennsylvania, which sold above 157 last January and at 170 only about a year ago, dropped down to the record-breaking figure of 110¾, there were many to doubt if any improvement might be expected this year. But the close of the month finds many securities enhanced in price and some prospect of improvement yet to come.

The "industrial" stocks fared the worst and there is no question that many of them are discredited. In fact, it is hardly possible to examine the list of securities which come under that head and to note the enormous capitalization they represent, without feeling some doubt as to the ability of the investing public to "digest" them, even at the tremendous concessions already made in their market values.

The litigation in connection with the United States Shipbuilding Company has caused no little unfavorable comment, and until it is ended and no more unpleasant disclosures are to be apprehended, its effect will be unfavorable.

During the month the conversion of United States Steel preferred stock into bonds was terminated, and the agreement with the syndicate cancelled. About \$170,000,000 of the bonds have been issued and \$30,000,000 are available for sale for cash. The remaining \$50,000,000 exchangeable for preferred stock will be held in the treasury of the company for the present.

Before the termination of the conversion scheme United States Steel common stock had fallen to 10, the preferred stock to 49¾, and the bonds to 65.

The experience of investors in industrial stocks has been in many cases unfortunate. They have seen their dividends reduced or passed. The Republic Iron and Steel Company is the latest to abandon dividend paying. After paying 7 per cent. per annum on the preferred stock since October 1, 1899, it passed the dividend on November 29. There is more than \$20,000,000 of the stock outstanding, and this action means a loss in income to those who own the stock, of nearly \$1,500,000 per annum.

The declines in prices of industrial shares have been sweeping. We have prepared a partial list showing the capital outstanding, the prices at which the stocks once sold, since January 1, 1900, the closing price on November 30, and the net decline. These securities represent a capitalization of close upon two billion dollars, but the present market value falls far short of equalling one half of that sum. The table follows:

	Amount Outstanding.	Highest price 1900-1903. *	Price Nov. 30, 1903.	Decline.
Amalgamated Copper.....	\$153,887,900	180	38½	91½
American Car and Foundry.....	30,000,000	41¾	18¾	22¾
" " preferred....	30,000,000	93¾	65	28¾
American Cotton Oil.....	20,237,100	57¾	29¼	28½

" " " preferred....	379,908,100	101 $\frac{1}{2}$	52 $\frac{1}{2}$	49 $\frac{1}{2}$

After contemplating the capital represented in the foregoing exhibit, it is a matter of very great importance that the creation of new corporations with large capital has practically ceased. The "Journal of Commerce" notes that the aggregate capitalization of new corporations with \$1,000,000 capital or more chartered during the month of November is the smallest for any month in more than four years. The total is only \$56,000,000, as against \$115,140,000 in November, 1902, and \$508,850,000 in November, 1901. For the eleven months this year the aggregate is \$1,572,201,000, as compared with \$2,520,828,650 in 1902 and \$3,510,355,000 in 1901.

There are many favorable conditions existing which must be taken into account in making any forecast of the future. Even the reverses that have been sustained will have a corrective influence. That we have a large corn crop this year is now definitely known. The Government's harvest estimate promises a total of 2,318,000,000 bushels, which was exceeded only by the enormous crop of last year, which was nearly 2,524,000,000 bushels. A big corn crop means a great deal to the railroads.

An interesting and important announcement last month was to the effect that J. P. Morgan & Co. had purchased \$40,000,000 of the \$50,000,000 issue of twenty-five-year 4 per cent. bonds of the Lake Shore Railway. This is suggestive of an improved feeling regarding investments.

The foreign trade returns for October caused surprise by reason of the magnitude of our exports. They reached the extraordinary total of \$160,370,059, an amount never exceeded in any month excepting in the corresponding month of 1900, when they were more than \$163,000,000. The exports were nearly \$50,000,000 larger than in September.

There is, of course, no mystery about this remarkable increase in exports. More than \$39,000,000 of the increase was in cotton exports, while breadstuffs contributed more than \$3,000,000. The exports of cotton alone amounted to \$60,000,000 as against \$21,000,000 in September and \$42,000,000 in October, 1902. The export price of the cotton shipped in October was over 10 cents a pound, as against only about 8 cents a year ago.

The movement of cotton has been delayed this year on account of the lateness of the crop, but it is now going forward rapidly. The movement is usually largest

between September and January, and we show the monthly exports in the first five months of the cotton year in the last six years, as follows :

YEAR.	September.	October.	November.	December.	January.
	Bales.	Bales.	Bales.	Bales.	Bales.
1896-1899.....	324,857	1,136,708	1,483,126	1,430,376	1,006,128
1899-1900.....	521,719	790,855	711,764	683,950	719,051
1900-1901.....	386,913	1,213,355	841,849	882,706	717,208
1901-1902.....	362,052	1,118,082	1,081,907	1,044,157	969,824
1902-1903.....	677,773	976,964	837,599	1,092,977	892,525
1903-1904.....	379,859	1,162,003

The September exports were small this year but October exports were about the usual amount. The bulk of the exports is in the first five months, as will be seen from the accompanying table :

YEAR ENDED AUGUST 31.	Five months ended Jan. 31. Bales.	Seven months ended Aug. 31. Bales.	Year. Bales.
1893.....	2,835,244	1,653,686	4,493,930
1894.....	3,621,590	1,712,853	5,334,443
1895.....	4,777,118	2,108,070	6,885,188
1896.....	2,844,829	1,908,555	4,751,384

1901.....	4,042,041	2,597,890	6,639,931
1902.....	4,605,822	2,124,391	6,730,213
1903.....	4,477,888	2,288,540	6,766,378

The large exports piled up a balance for October of \$78,000,000, making a total of nearly \$309,000,000 for the ten months of the calendar year. Some gold has come from abroad and there is no reason to doubt that more will be forthcoming if it is actually needed. But the amount of money now in circulation is far in excess of all previous records. There is now nearly \$2,450,000,000 of money outside of the United States Treasury. This is in excess of \$30 per capita for the entire population. It is nearly double the per capita in 1879 and \$8.80 more than in 1896. We present a table showing the amount of the various kinds of money in circulation at four different dates :

	July 1, 1879.	July 1, 1892.	July 1, 1896.	Dec. 1, 1903.
Gold coin.....	\$110,505,362	\$408,568,824	\$454,905,064	\$627,025,092
Gold certificates.....	15,279,820	141,093,619	42,168,119	404,070,929
Silver dollars.....	8,036,439	56,817,462	52,116,904	60,799,860
Silver certificates.....	414,480	326,693,465	339,657,191	466,501,082
Fractional silver.....	61,346,564	63,293,704	60,204,451	97,130,806
United States notes.....	272,289,112	309,559,904	224,249,868	344,293,651
Currency certificates.....	29,355,000	29,840,000	31,390,000
Treasury notes.....	98,258,692	95,045,247	16,381,280
National bank notes.....	321,404,966	167,221,517	218,168,122	412,965,618
Total.....	\$818,631,793	\$1,601,347,187	\$1,508,434,968	\$2,449,168,418
Per capita.....	\$16.75	\$24.56	\$21.41	\$30.21

On July 1, 1879, six months after the resumption of specie payments, there was \$818,000,000 in circulation, or \$16.75 per capita. This was increased to \$1,601,000,000, or \$24.56 per capita, by July 1, 1892. Then there came a decrease which left the total at \$1,508,000,000, or \$21.41 per capita, on July 1, 1896. Since the latter date there has been an almost continuous increase. It will be noted that more than \$1,081,000,000 of the circulating medium consists of gold. Counting the gold reserve held to secure the United States notes, about one-half of the entire currency is gold.

A notable decrease has occurred in the production of pig iron, and without attempting to exaggerate its meaning, it must be accepted as evidence of a considerable reduction in consumption. The production in October (31 days) was 1,562,819 gross tons, as compared with 1,596,703 tons in September (30 days) and with 1,716,906 tons in June (30 days). But the output has been further limited since October 1, the figures for that month therefore not showing the full extent of the reduction. On November 1 the weekly capacity of the furnaces in blast was only 282,219 tons as reported by the "Iron Age." This compares with 361,492 tons on October 1, or nearly 80,000 tons per week, which means a rate of 4,000,000 tons a year, but the decrease has continued since June 1 last, amounting since that time to nearly 116,000 tons weekly, or about 6,000,000 tons a year.

The following table shows the weekly production of pig iron at various dates since July 1, 1897:

July 1, 1897.....	164,064	July 1, 1900.....	283,413	June 1, 1903.....	398,139
January 1, 1898.....	226,606	January 1, 1901.....	250,351	July 1, 1903.....	395,042
July 1, 1898.....	216,811	July 1, 1901.....	310,950	August 1, 1903.....	362,380
January 1, 1899.....	243,516	January 1, 1902.....	298,480	September 1, 1903.....	369,933
July 1, 1899.....	288,363	July 1, 1902.....	310,950	October 1, 1903.....	361,492
January 1, 1900.....	294,186	January 1, 1903.....	353,800	November 1, 1903.....	282,219

From July 1, 1897, to May 1, 1898, there was a continuous increase until the output reached 284,163 tons. With some reverses the increase continued until February 1, 1900, when the production was 293,014 tons per week. During most of the year 1900 production decreased, and on November 1 it was down to 215,304 tons, but by June 1, 1901, it had increased to 324,761 tons, and without any serious setback kept moving ahead until on June 1, 1903, it had reached 398,139 tons, the maximum record. The decrease which has since occurred has reduced the weekly output to the lowest point touched since February, 1901, or in nearly three years.

Some very valuable railroad statistics for the year 1902 are to be found in "Poor's Manual" for 1903, just issued. It makes the total railroad mileage in the country 803,132 miles, an increase for the year of 4,364 miles. It gives the capital stock of the railroads operating 199,685 miles at \$6,078,290,596, or \$30,439 per mile, and the bonded debt at \$6,465,290,839, or \$32,377 per mile. The capital stock per mile decreased \$32, while the bonded debt per mile increased \$1,566. The latter is the largest since 1880 and is probably the largest for any period. The following table shows the earnings and interest and dividend payments yearly since 1890:

YEARS.	Gross earnings	Net earnings	Total available revenue.	PAYMENTS FROM AVAILABLE REVENUE.	
				Int. on bonds	Dividends.
1890.....	\$1,086,069,735	\$342,071,298	\$449,712,756	\$224,499,571	\$53,575,705
1891.....	1,125,381,994	350,748,483	451,947,193	228,572,703	89,099,787
1892.....	1,169,036,840	352,817,405	467,216,357	229,909,292	93,862,412
1893.....	1,207,106,028	358,648,918	469,815,755	237,677,728	94,295,815
1894.....	1,066,943,358	317,757,399	413,916,233	234,702,912	88,478,669
1895.....	1,092,395,437	323,196,454	436,964,529	239,698,134	81,685,774
1896.....	1,125,632,025	332,766,979	437,701,890	243,287,730	81,528,154
1897.....	1,132,866,626	342,792,030	440,423,354	234,454,578	83,690,040
1898.....	1,249,558,724	389,666,474	494,203,378	237,133,099	94,937,526
1899.....	1,336,096,379	423,941,689	479,561,094	239,178,913	109,032,252
1900.....	1,501,695,378	483,247,526	551,020,460	244,447,806	140,343,653
1901.....	1,612,448,826	520,294,727	588,663,541	254,318,389	156,887,283
1902.....	1,720,814,900	560,026,277	635,269,592	263,237,451	178,200,752

The gross earnings increased \$108,000,000 in 1902 as compared with 1901 and the net earnings increased \$40,000,000. Interest on bonds increased \$9,000,000, and dividends on stock \$21,000,000. The total dividend payments increased nearly \$91,000,000 since 1896, or to more than double what they were six years ago. A particularly interesting table gives some valuable data covering twenty years. From it the following figures for the last ten years are taken:

YEAR.	Interest, average rate.	Dividends, average rate.	Per ton per mile, average rate.	Per passen- ger per mile, average rate.	Earnings per mile of rail- roads in operation.		Percent- age of expenses to earnings.
					Gross.	Net.	
	Per cent.	Per cent.	Cents.	Cents.			
1893.....	4.81	1.88	0.898	2.072	\$8,963	\$2,069	70.29
1894.....	4.19	1.66	0.864	2.025	6,064	1,803	70.22
1895.....	4.24	1.58	0.839	2.069	6,197	1,804	70.41
1896.....	4.45	1.52	0.821	2.062	6,223	1,840	70.43
1897.....	4.24	1.49	0.797	2.039	6,228	1,884	69.74
1898.....	4.21	1.68	0.758	1.994	6,771	2,111	68.16
1899.....	4.24	1.90	0.726	2.002	7,161	2,272	68.27
1900.....	4.24	2.42	0.746	2.031	7,826	2,519	68.93
1901.....	4.21	2.62	0.756	2.028	8,270	2,668	67.73
1902.....	4.07	2.98	0.764	2.012	8,696	2,830	67.45

The average rate of interest paid is the lowest in twenty years, while the average rate of dividends was the largest in the same time. The freight rate per ton per mile is higher than in either of the previous four years, while the passenger rate was the lowest for any year, excepting 1898 and 1899. The gross and net earnings per mile as well as the expense ratio make a very favorable showing.

THE MONEY MARKET.—About all the activity in the local money market is in call money, rates for time money being considered too high. There is very little doing in commercial paper, lenders preferring to put their money into call loans which now command a high rate. At the close of the month call money ruled at 6 @ 9 per cent., the average rate being 7 per cent. Banks and trust companies loaned at 6 per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 6 per cent. for 30 to 90 days, and $5\frac{1}{2}$ per cent. for 4 to 6 months on good mixed collateral. For commercial paper the rates are 6 per cent. for 60 to 90 days' endorsed bills receivable, 6 @ $6\frac{1}{2}$ per cent. for first class 4 to 6 months' single names, and 6 @ $\frac{1}{2}$ 7 per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—The reserves of the clearing-house banks steadily declined throughout the month, and most of the time have been near a deficit. The banks lost \$12,000,000 specie during the month and \$4,000,000 legal tenders, but recovered \$1,500,000 of the latter loss in the last week. The total reserves are \$15,000,000 less than at the beginning of the month, while the surplus reserve, after falling below \$4,000,000 on November 21, is now but slightly in excess of \$6,000,000 as compared with nearly \$16,000,000 a year ago. The deposits fell off \$44,000,000 in the month and are \$42,000,000 less than they were a year ago. Loans were reduced \$31,000,000 in the month but they are \$1,000,000 more than they were at this

time last year. Loans now exceed deposits \$39,000,000. A year ago deposits showed an excess of \$4,000,000.

MONEY RATES ABROAD.—There was no change in the posted rates of discount of any of the European banks last month although during the early part of the month it was generally expected that the Bank of England would advance its rate. Discounts of 60 to 90 day bills in London at the close of the month were 4 @ $4\frac{1}{2}$ per cent. against $3\frac{3}{8}$ @ 4 per cent. a month ago. The open market rate at Paris was $2\frac{3}{8}$ per cent., the same as a month ago, and at Berlin and Frankfurt $3\frac{3}{4}$ per cent. against $3\frac{1}{2}$ @ $3\frac{3}{8}$ per cent. a month ago.

FOREIGN EXCHANGE.—The foreign exchange market was weak during the entire month with only an occasional exception. The supply of commercial bills against cotton and grain has been very large, and it is understood that there has been a large buying of these bills for the creation of credits in anticipation of the early payment of \$40,000,000 for the Panama Canal, which is likely to be made an exchange transaction.

Austria-Hungary about \$2,000,000. England has \$5,000,000 less gold than it had a year ago, Germany having gained about that amount. France has lost nearly \$50,000,000.

NATIONAL BANK CIRCULATION.—Nearly \$2,000,000 of bonds were deposited in November to secure National bank circulation and the notes based on Government bonds increased nearly \$2,500,000 while the circulation based on lawful money was reduced about \$900,000. The total amount outstanding increased \$1,500,000. Of the \$384,000,000 bonds deposited to secure circulation \$378,000,000 are the new two per cent. issue, while \$105,000,000 additional are deposited to secure public deposits.

\$5,000,000 in the net debt. In two months the debt has increased \$8,000,000. The interest-bearing debt was reduced \$2,800,000 by the retirement of that amount of the five per cent. bonds of 1904. Of these bonds only \$7,754,500 are now outstanding. They are redeemable after February 1 next, but the Secretary of the Treasury has offered to redeem them upon presentation. Only about \$3,000,000 of other bonds were exchanged for the two per cent. bonds of which there are now outstanding \$538,000,000, all but about \$50,000,000 of which are owned by the National banks.

GOVERNMENT REVENUES AND DISBURSEMENTS.—There was another deficit in the Government's income account last month but not as large as the October deficit. The receipts were about \$44,700,000 and the expenditures \$47,400,000, making a deficit of \$2,700,000. This brings the expenditures for the five months ended November 30 in excess of the receipts by \$2,000,000. During the same time in 1902 the receipts exceeded the expenditures by \$14,000,000. In the five months the receipts were \$6,000,000 less than in 1902 while the disbursements increased \$10,000,000.

MONEY IN THE UNITED STATES TREASURY.—There was a decrease of \$4,000,000 in the net amount of money in the Treasury in November, although the total amount was increased \$2,000,000. The difference of \$6,000,000 is accounted for by an increase in certificates outstanding.

UNITED STATES FOREIGN TRADE.—Cotton exports to the extent of \$60,000,000 caused a large increase in the total exports of merchandise in October, which reached \$160,000,000, the largest for any month since October, 1900, and larger than all other months before or since. The imports were nearly \$82,000,000, so that the net exports exceeded \$78,000,000. Compared with a year ago, the exports increased \$16,000,000 while the imports decreased \$5,500,000, making the net exports \$11,500,000 larger than in October, 1902. In October, 1901, the balance was \$64,000,000 and in 1900 \$92,000,000. For the ten months of the calendar year the exports were \$1,149,000,000, and the imports \$840,000,000, leaving a balance of nearly \$309,000,000, or

\$11,000,000 more than in 1902. In the last two months of 1902 there was a balance of \$98,000,000. To equal last year's record a balance of \$82,000,000 in November and December this year will be required.

BANKERS' OBITUARY RECORD.

Archer.—Benjamin F. Archer, President of the Camden (N. J.) National Bank, died October 30, aged seventy years.

Bross.—Judge Fredolin Bross, President of the Alexander County National Bank, Cairo, Ill., died November 23. He was born in Germany in 1835 and came to America in 1852, locating at Cairo in 1856.

Burley.—Augustus Burley, a director of the Merchants' Loan and Trust Co., Chicago, and formerly city comptroller of that city, and for many years otherwise prominently associated with business and political affairs in Chicago, died November 27. He had been a director of the Merchants' Loan and Trust Co. continuously for forty-nine years.

Burnett.—W. J. Burnett, Cashier of the Farmers and Merchants' Bank, Sapulpa, Ind. Ter., died October 31.

Coe—Levi E. Coe, President of the Meriden (Ct.) National Bank and the Meriden Savings Bank, died November 2, aged seventy-five years. He had held many local judicial and other offices, and was three times elected mayor of Meriden.

Darby.—Francis M. Darby, Treasurer of the Safe Deposit and Trust Co., of Baltimore, and formerly United States Assistant Treasurer at Baltimore, died November 10.

Drake.—Gen. Francis M. Drake, ex-Governor of Iowa, founder of Drake University, and President of the Centreville National Bank and the First National Bank, of Albia, died November 20. Gen. Drake was born at Rushville, Ill., December 30, 1830, removing to Iowa with his father's family in 1837. In early life he engaged in the mercantile business and later became interested in railroad and other large enterprises, in which he was highly successful, leaving a large fortune. He contributed liberally to educational and benevolent objects. In 1896 he was elected Governor of Iowa, serving in that capacity for two years.

Dox—Gen. Hamilton B. Dox, for thirty-eight years Cashier of the Hibernian Banking Association, Chicago, died November 13, aged eighty-four years. At the beginning of the Civil War he enlisted with the Twelfth Illinois Regiment of Cavalry and as the close of the war he was brevetted brigadier-general.

Frost.—T. C. Frost, President of the Frost National Bank, San Antonio, Tex., and identified with the business interests of San Antonio for thirty-five years, died November 21. He was born at Belfont, Ala., about seventy years ago. At the time of his death he was considered one of San Antonio's wealthiest citizens, having risen from a humble position.

Gascoine.—James Gascoine, President of the People's Bank, Brooklyn, N. Y., and principal organizer of the institution, died November 27, aged sixty years.

Hammond.—Clarence W. Hammond, Vice-President and Cashier of the People's Bank, Buffalo, N. Y., died October 30. He was born at East Jaffrey, N. H., June 3, 1843. After being educated he engaged in the lumber business at Saginaw, Mich., and about twenty-five years ago went to Buffalo. He assisted in the organization of the People's Bank.

Huhn.—George Huhn, since 1899 President of the German-American Bank, Minneapolis, Minn., died October 31. He was born in Germany, November 22, 1835, and came to this country in the early fifties, going to St. Paul in 1855 and to Minneapolis in 1867. He was one of the most active organizers of the German-American Bank, of which he became President.

Klein.—Henry Klein, President of the Union Bank and Trust Co., Helena, Mont., and one of the wealthy men of the State, died November 13, aged sixty-one years.

Knowlton.—Dexter A. Knowlton, of the banking firm of Knowlton Bros., Freeport, Ill., died November 19, aged sixty years.

Koehnle.—Fred C. W. Koehnle, President of the German-American National Bank, Lincoln, Ill., died November 17. He was born in Germany, January 4, 1837, coming to America while a young man. In 1856 he located at Lincoln, Ill., where he was twice elected circuit clerk. Besides being interested in banking and other enterprises, he was the manager for William Scully, a large land owner in Illinois and other Western States.

McGrew.—Thomas F. McGrew, President of the Mad River National Bank, Springfield, Ohio, died November 3, aged eighty-six years. He had resided at Springfield since 1856, and had been engaged in banking there continuously since that time.

Mosgrove.—Dr. James M. Mosgrove, President of the Citizens' National Bank, Urbana, Ohio, died November 9, aged seventy-eight years.

Perrie.—Joseph F. Perrie, Cashier of Mitchell, Finch & Co.'s bank, Maysville, Ky., and former sheriff of the county, died November 5.

Plummer.—Col. A. L. Plummer, President of the Hillsboro (No. Dak.) National Bank, died November 16. He was born in New York city in 1837, and moved west early in life. In 1881 he established the bank of which he became President, holding that office until his death.

Rogers.—Theodore Rogers, for many years President of the Bank of the Metropolis, New York city, died November 8. He resigned the presidency of the bank a short time ago, owing to a stroke of paralysis, but the directors created the position of chairman of the board, which he has since occupied.

Tooker.—Frank B. Tooker, President of the Harlem Savings Bank, New York, and one of the organizers of the bank, died November 26. He was born at Kingston, N. Y., in 1830.

Failures, Suspensions and Liquidations.

Colorado.—The Bimetallic Bank, of Cripple Creek, organized in 1891, and having \$100,000 capital and about \$220,000 deposits, closed November 5. A heavy decline in the value of mining shares and real estate is given as the cause of failure.

—The Pueblo Title and Trust Co., of Pueblo, capital \$250,000, suspended November 5.

—On November 4 the First National Bank, of Victor, suspended. Its capital was \$50,000, and the deposits were about \$300,000.

Illinois.—The First National Bank, of Dundee, closed November 22, and discrepancies are reported in the accounts. Capital of the bank was \$50,000 and deposits \$150,000.

Indiana.—The Indiana National Bank, of Elkhart, was placed in the hands of a Receiver November 19. Its deposits were over \$600,000 a short time prior to the suspension.

—On November 6 the Citizens' Bank, at Star City, capital \$6,500, suspended.

Iowa.—A Receiver was appointed for the State Bank, of Germania, November 26. The bank had \$25,000 capital and \$40,000 deposits. Too much real estate and overdrafts are given as the cause of the failure.

—The Bank of Ireton closed November 17.

—On November 4 W. R. Ady was appointed Receiver of the State Bank, of Sheldon.

Maryland.—The banking-house of Jones & Co., of Mount Airy, suspended October 30, the firm and Mr. Jones individually making assignments. Investments in real estate, and a decline in the value of stocks and securities are said to have caused the failure.

Massachusetts.—Winslow & Co., doing a banking business at Worcester, went into the hands of a Receiver November 12. Col. Samuel E. Winslow, of the firm, had extensive manufacturing interests, and his liabilities on account of the bank and manufacturing are placed at nearly \$500,000.

Minnesota.—The Scott County Bank, of Jordan, suspended October 31.

South Carolina.—Owing to the death of the President and Cashier of the Farmers and Merchants' Bank, of Camden, the bank assigned November 18 to E. S. Vaux and A. D. Kennedy. It is stated that the assets will eventually realize an amount sufficient to meet all claims.

South Dakota.—The Eagan State Bank was closed November 17 by the State Bank Examiner. Deposits amounted to \$40,000.

Texas.—J. A. Buckingham, doing a private banking business at Dawson, closed October 31. It is stated that deposits were about \$12,000 or \$15,000.

—The Farmers' National Bank, of Henrietta, was closed by the Comptroller of the Currency November 19. Its deposits on September 9 were \$103,191; due to banks and bankers, \$14,050.

—The Bank of Kenedy closed October 31.

West Virginia.—The Bank of Pine Grove, a State institution capitalized at \$25,000, and having \$50,000 deposits, closed November 25.

Wyoming.—W. A. Denecke & Co., private bankers doing business at Casper, closed November 28, and some of the owners of the bank were arrested charged with receiving deposits when the firm was insolvent. It is said that stockholders have subscribed enough to make up the shortage in the assets.
